Dave:

No one is denying you the right to your religion of "amateur worship", we all need some high power to look up to. But, you must realize you are in a church which has a very small following (mostly other hams, and NOT all of them!)

Fact is, the computer is a TV with a tv card inserted--a stereo system with a high quality audio card, tuner card inserted--a cd music player with cd and proper software--a dvd player with a dvd-cd and proper software--a home security system with the proper card and related software and backup-power supply--and soon to be an amateur rig with proper receiver card and xmitter card (some are already there!)

Fact is, the computer IS amateurs future--like it or not... only reason the future is not here right now, old amateurs can't adapt and die first... and serve as a hindrance to the new minds bringing the future with them...

It looks to me like you are incorrect. You attempt to impugn my DX
operations (for the third or fourth time over the course of several
years) has seen Brian Burke and his various alter egos slapped silly
hereabouts. You've looked silly on the non-issue before and you're
looking silly on the non-issue now. Your single supporter at the

moment?--a bisexual, pagan S&M freak who admits that he lies based upon convenience.

> I'm curious what it takes to
> impeach a so-called "A1 Operator?"

My guess would be "more than your say so". You had what--four rapid fire 10m SSB QSOs with me from Botswana in the '92-'93 time frame? You were worked. I have no memory of those QSOs but I'll bet you were treated courteously. If you requested a QSL card(s) via WA8JOC and enclosed an SASE, you received your A22MN QSL very quickly.

The plain and simple fact is, Brian, "bb", "hothead" or whatever, you haven't a leg to stand on.

Dave K8MN

My point was that there is no issue on which all amateurs can agree on the same answer/approach/methodology. Those whose point of view is not adopted, even if they are a very small minority, will start hollering about the ARRL serving only a few hams or special interests despite evidence to the contrary.

Mark, I've spent a couple of hours reading through some of my old postings to Steven Robeson and Brian Kelly and a few others. What surprises me is how polite I was to these jerks. Now that I'm often rude to them, I think that I've done nothing more than dirty my own hands. They're still the rude jerks that they always were.

Dee:

I see the issues as, for example:

1) Induce more licensees so the amateur contains a base of more varied and qualified skills.
2) Inspire a greater interest in manufacturers to provide more and updated equipment.
3) Restore a greater importance and public awareness in amateur radio, ideally, everyone IS a ham, or at least knows one.
4) Structure bandwidth to serve the the greatest number with the modes (protocols) they require or are interested in.
5) Inspired experimenting with adapting the new technologies to amateur radio, and not just on a commercial level, but at a "hands on level" which amateurs can participate in.
6) Clear all barriers and have free access to foreign hams, standardize as much as possible so hams can serve as ambassadors to the world.
7) Attempt to interface amateur with the internet in anyway possible so the amateur radio gains a useful status in todays world which keeps it competitive to sustaining its future.
8) etc, etc, etc...

Once true principals and goals are established for the masses radio is meant to serve the course will become clear, those not working in radios best interest can be shown for what they are and weeded out... some do not wish this... first, arrl has to become a platform to work out these goals from EVERYONES input, and if the pool of amateurs is able to be expanded to a necessary degree and become diverse enough to represent all of technology, it just may...

Sure...You're one of the politeist liars and deceivers in the
group, Brain.

Actually, I consider lying to be one of the RUDEIST things you can
do, and BrainyBoy, you've got a long list of credits in that
department.

> Now that I'm often
> rude to them, I think that I've done nothing more than dirty my own
> hands. They're still the rude jerks that they always were.

Your hands were as dirty as any from the git-go, Brain. "Lava"
won't get THOSE hands clean.

Steve, K4YZ

## 1830. Markie Claims no "action"... more likely he's missing the point

No threats, Markie. And it's "alleged", "alleges", "carried"

> But If he called the Cops they would have acted in a few minutes, if
> they Beleived him

"believed"

Not necessarily.

> If He call the mental Health people then that would take a bit longer
> IF they believed him, But by law in Michigan a serious allegeation that
> a person is a danger to himself or other must be investigated witin 24
> hours

And that investigation does not necessarily require proactive
interaction with the subject.

> We will see, assuming I am still a free man tomarrow at say 1 pm local
> time that should show Stevie wasn't believed

"tomorrow"

Again, not necessarily, Markie. Interesting conversations I had.
Enlightening. Some of my expectations (based upon other state's
methodologies) were left wanting, however there were some interesting
revelations.

> Of course the most likely possiblity is that stevie is just lying ,
> again

I can't be lying "again" since I wasn't lying in the first place.

Steve, K4YZ

Dee:

You expect it to happen all-at-once, I suspect... but, it will not...
since it won't, many will call failure and hope to prevent change...

It will be a series of baby-steps.

That first has already been taken, removal of CW testing... next, find
ways to provide fertile ground for either the ideas I have already
expressed--encourage someone you know to get a ticket--pointing out they
now only have to take a written test, and/or other ideas which benefit
the hobby. Each of us can start in a local amateur group which is local to
us, if nothing else, shame them into getting involved in the real future
of amateur radio!

The single most important thing any amateur can do is focus on the issues,
improvements needed and gaining support of others to overcome the inertia
of the current stagnant status quo. Decide if you wish to be part of the
solution or part of the problem. Have patience and stick to what you know
is right... don't drop down and begin petty battles with those who want
to divert you and wear you out to maintain the status quo... take pride
in having the courage to oppose the "small man attitude" which so many
have seem prone to fall victim to...

... you know girl, "... longest journey begins but with the first step..."

Hmmm, long distance phone service was greatly reduced and no cell
phones were available in east central Alberta for a day. After the
main fiber line to Edmonton was severed. This affected some 100K
residents of the area.

Certain high-profile members of the 80 meter crowd migrated here after
Riley sent a bunch of NALs a few years ago. I have never seen such a
group of people so obsessed with each other.

For some it's pills. For others, it's alcohol. But for this group,
chaos seems to be their drug of choice...

Try getting back on 14.313 for a welcome change.

Ole Sid the Lid has been heard several times on that
freq this week in the afternoon, along with the kooky
indian from Evansville and a few of the old original
gang of Liberty New QRM'ers from years gone by.
They've seemed to have mellowed out a bit but their
still as ornery and ignorant sounding as they were from
years ago. Seems like things never change on ham radio
until they either die off or go into the 'Happy Acres' rest
home, where the closest thing they'll get to a ham radio
is a transistor radio playing rush on the window table and
the closest thing they'll see to a good Metal Ground Plane
is the chromed stainless steel bedpan that Nurse Ratchet
drops by each evening for the "long nights haul...."

One cannot predict what services will be dead in a regional
emergency. Any system that relies on lots of infrastructure
is more likely to be impaired. Ham radio, aside from radios,
antennas and portable or mobile power source (say car battery)
usually survives in enough numbers to be useful.

Hi Tony,

You're proving my point. IOW, lots of people "know" things that aren't true. In large scale emergencies, cell phones are usually just ballast. Should I have put a sarcasm alert on that post? 8^)

I don't know why anyone would keep their military service a secret
(unless he's really Ollie North). I've always been up front about my
service in the USMC:

Plt 2051 out of MCRD San Diego, 1981;
MCCES at MCAGCC (29 Palms), MOS 2841, 1981 to 1983;
3/8 at Camp Geiger (Camp Lejeune's back door), 1983 to 1985;
BLT 3/8, 24th MAU, 1984 (Beirut);
2nd AAV, 'Outhouse' Bay (also part of Camp Lejeune) for several months
in 1985 until discharged.

But Stevie you claim to have had "Proof" of my crimes and of my metnal
condiction

If you have Proof no investagation is required

really?

But I know when I called because I believed from the volume of
screaming next door the cops came in 15 minutes (it is 12 miles to
town)

if you had proof then theyd be here by now

(Apologies to the top posting hater community, but I decided to follow John's lead).

Got the wrong guy John.

I've been using most of that stuff for quite a while, and I could point you to a dozen or so hams well over the age of 70 who not only use it; they understand how it works and some even tinker with the hardware and software.

I'm not quite that old yet, but it ain't always that easy to keep up with some of them when they discuss their latest project.

About a quarter of a century ago, I was teaching a system using a synthesized HF sideband transceiver, on a single PCB about 2 or 3 inches square, running from about 7 to 10MHz and digitally controlled either locally or remotely (up to 100 transceivers controlled from a DEC minicomputer) - would love to have slipped one in my shirt pocket, taken it home and added a linear! Funnily enough most of the guys I was working with have decided to become hams within the last 10 or 15 years.

The HF receiver card in one of my PCs gets far more use than my stand-alone transceivers with the DSP etc. the card is much more versatile - more modes, bandwidths etc. etc.. Software defined is the way to go.

But, and it is a fair sized but, I find I can have much more detailed and interesting discussions of this technology with older rather than younger folks. I find (just my experience and maybe the folks I choose to hang out with) that the younger generation tend to be users who know no more about how it works than my granny knew about how her telephone worked. But boy can they use it!

My generation understood it down to the electron level.
My kids understood it down to the IC level.
My grand kids (teenagers - with a few exceptions) know how to use it but don't understand, or really care, how it works.

Can't blame them, it's progress. The systems have become so complex that one pretty much has to specialize and folks with a general knowledge of hardware and software, theory and practice of entire systems are becoming a vanishing breed. That is true of much more than communications technology - the guy at the corner gas station probably can't fix your anti-skid braking system any more than the local pharmacy can sell you the part to fix your TV any more.

Dave
Sitting at his computer listening to an HF net on his software defined radio running on the same processor.

KY4Z's words

Actually, I consider lying to be one of the RUDEIST things you can
do, and BrainyBoy, you've got a long list of credits in that
department.

look at them

Stevie think the rest of us Owe HIM respect despite the Fcat he has
done nothing to earn it

and what he demands is stupid.

he claims Lying is the rudest thing you can do

I can certainly see why he does not think anything of threatening
MURDER

Personaly I think threatening Murder is pretty rude

I think threatening to talk to someone perants about their son's
alleged crimes and aleged sexual orientations

These aren't rude things according to Stevie, and they aren't his fault

> Slaped Silly?

No, slapped silly.

> and more lie on your part

Mark, you are big on calling others "liers". What lie has been told by me? Do you not understand that the term "slapped silly" means that Brian has been made to look foolish by quite a number of posters, for his absurd accusations? There is no foundation for Brian's rant. I have no control over the action of any other countries amateurs. I broke no U.S. regulations. I broke no Tanzanian regulations.

> But interesting no denail of the unlying facts

Denail? Unlying? I haven't denied being an attorney. I've never denied being part of the New World Order. At no time have I denied being offered a contract by Universal Pictures.

> whish has what to do the subject

"Whish" is the sound of related information going right over your head. Have you any idea what the A-1 Operator club is? Do you believe that it has something to do with usenet postings? Do you believe it implies an ability to control the action of other operators? Read up on it and get back to me, Mark.

>>The plain and simple fact is, Brian, "bb", "hothead" or whatever, you

"Their" band, "Colonel" Morgan. Let's see now...you have no facts at your disposal, no understanding of regs and a belief that silence is confirmation of charges brought by someone who wasn't present. Believe what you like.

> gee sounds like a cofession to me

Izzat how they handle "cofessions" in your pagan flock?

Dave K8MN

Do I write you off as another idiot who can't follow the flow of
conversation?

Here, I have simplified it for you, don't count on me doing this again,
get your mother to explain next time:

-=jd=-: You would be grossly mistaken in this case;

me: Hardly the first time that individual has behaved in that manner, we both
know that.

-=jd=-: I'm just making a casual observation. Your public posts in here
tend to validate my assessment.

me: Far as what you are or are not, as you say, a person gives that away with
their posts, so quit pointing mine at yourself and trying to defend
yourself from them--and if the shoe fits, wear it!

-=jd=-: If you don't like or agree with that, then quite
"telling on yourself!"

me: Far as what I will do or not do, I will decide that, you are the last
person I would consider as a mentor...

As I understand it, you believe me to be sick for laughing at the very
idea of someone even thinking of using a mode he claims not to be able
to use. I find it more than a little amusing. It is your fantasy so
feel free to modify it. I like the guy shouting "Ayday" too.

>

"Commenting", Mark. You aren't commenting on my words. You know nothing of DXing and precious little of my operations on 6m or any other band.

> but then you don't respoibility for your actions

I don't repoibility?

I take full responsibility for my actions. My conscience is clear. I still think you're a twit.

>
>>I would also find your lifetime of professional victimhood a good
>>subject for a joke.
>
>
> and more of your Stevie type lies

That isn't a lie, Mark. Victimhood is what you're all about. You can't pass a morse code test and you're a victim. You put together an English sentence and that's someone else's problem and you're a victim because of your handicap. Let's all get together and feel sorry for poor Mark. Let's try to make it easy on him because he just can't do things.

I'm not feeling that generous, Mark. I know too many people with difficulties in their lives who are, at least, trying to do something to better themselves.

Dave:

Interesting, when I have exchanged station pics, I have never seen the new equip, other than my own...

When I exchange equip descriptions, everyone is mentioning drake, henry, heathkit, etc... frankly, last months maybe a year--I gave up paying close attention... in fact, my xmitter pci card is a proto-type which an engineer made a gift of to me when I worked on some software to support it (they will actually market a USB model.) Last time I chatted with him, it was still sitting on his companies "back shelf" waiting for the market to develop... they strongly support dropping CW and expect an influx of new hams which they feel will accept the equipment and make profitable the sales. In the meantime they market to police, fire, hospitals, gov't...

Then again you admit the charge

Nothing has been to look absurd

you are only making yourself lok more guilty

I do undersatnd slapped silly it just doesn't apply

He can't. He slipped up one day and said that he was in seven hostile
actions, so everything has been hush hush since then. Len did a nice
expose with respect to Steve's age and the possible periods of service,
and it didn't add up to seven events. In-Your-Face about absolutely
everything else, Steve has yet to set the record straight. Stolen
Valor comes to mind.

I've always been up front about my

I fail to see what all of the current "non-conformists" are trying to
change. It's like they're so obsessed with insults that they've
forgotten what the original debate was about.

Mark, shouldn't you be scared that Steve will have you locked up? He said he would. All it takes is a phone call. He's so important in the field of applied psychology, that every law enforcement agency in the USA hangs on his every word. They've even created this giant network of 911-operators to stand-by 24/7, waiting for Steve to call in. Maybe he'll even reveal his seven hostile actions to one of the operators.

Fascinating, I don't know who you talk to but I can only think of a couple of people I know using Drake stuff, and then only as collectors items or though nostalgia. Can't remember the
last time I heard someone mention Henry, except in an inductor value, and one of the few pictures of Heathkit equipment I have seen in a long time was in a magazine on antique equipment a (younger) friend showed me a couple of weeks ago.

I have a real hard time believing that the long overdue dropping of CW will result in much of an influx to HF. If they were interested in HF they would already be here.

I've had a two hour HF swap shop running in the background and I don't think I heard anything that old being offered for sale or looked for except for a couple of antique RCA, Hammarlund and National receivers, but they were in the antiques listing. Plenty of DSP rigs
and digital stuff, a few people looking for specialized digital ICs. It is quite common to hear current generation equipment being sold by very elderly hams due to deteriorating health and/or moving into nursing homes or apartments where they must give up the hobby.

I'm having coffee with an 81 year old tomorrow and he has a DSP HF rig; and a software defined receiver running on his backup PC, which he also uses to watch TV and movies. He usually has at least one PC in pieces as he reconfigures it and has been inside his ICOM and
Kenwood HF rigs with a soldering iron more than once, although as his age creeps up he is reducing those activities somewhat. He will probably want to discuss optimizing the data base for his SDR receiver.

Not every ham over 40 is using a hand key to a crystal controlled 6L6.

Dave

I googled a few of his posts. "281.6" isn't a USMC MOS, and even if
there was a typo on his DD-214 he would have known the -correct- MOS
because EVERY Marine knows his or her MOS as well as many of the other
MOS's in the related fields: 0311 = grunt; 2531 = grunt w/radio (aka
"sniper target"); 2511 = pole-jockey; 2811 = wire tech; 2861 = radio
tech (usually some asshole shop chief) 2881 = crypto tech..... well,
you get the idea. I also noticed he claims to have a good conduct
"medal". No such animal -- it's just a ribbon. Yep, you got him pegged
alright, he's a wannabe warrior.

Nope, Washington (the state, not the city). But I had a girlfriend in
Ohio once. A real knockout!

Maybe he reveal One of them, don't ask for mircals after all

The most I expect he can scare up is maybe a visit from a Socail worker

I have had to deal with those before since I take care of my Father who
is slowly dying. a Number of follks have called expressing concern esp
in setting where I have been "outed" as Bi. It is old home week

Do people have their 60th birthday, and suddenly become stupid or
something? I had a PSK31 QSO with a 96 y.o. Hams last year. He was
checking out his new laptop. Had a modern rig also. That's just one
case. There are plenty other oldsters I've QSO'ed with who are trourghly
modern.

Of course he can -- him and his crystal ball.

>claims a LOT of shit

Apparently. I've read a few more of his posts. It's a wonder he still
posts after publically humiliating himself for several years. But then
again, he doesn't have anything left to lose, does he?

Don't try to make the scenario something altogether different. We were
discussing *you* attempting to respond to a morse distress call. Now
you want to shift things around so I'm ignoring a distress call.

> I think you are sick for laughing at the Fact I would try to help
> someone in distresss

From you own tale of your experience with trying to learn morse, you'd
be 1) incapable of recognizing that it was an emergency and 2) incapable
of understanding what help was needed.

I helped no others break any law unless you take the very peculiar and
totally incorrect view that by merely showing up on a band, I enticed
someone to break his country's regs. Others have attempted to correct
your mistaken perception, but you've simply ignored them.

> Maybe you can explain how this can possibly be so.

I doubt it, since you are clearly uninterested.

But in evading the important points over and over again, you make your
self look guilty

>
> > I do undersatnd slapped silly it just doesn't apply
>
> Then you haven't been paying attention or you do not understand the term
> at all.

I have been paying attention. and it doesn't apply. since you just keep
ancing around the relavant issues

>

and you want to believe you are in the wrong by refuseing to answer
basic questions

and you should not mind if you were telling the turth when you said
"Believe
what you like."

But obviously you do care, so why bother with such a lie

you clearly do care or you would not bother
>
> > Based on what you have said and what you refuse to say
>
> There you have it. If I say something, I'm guilty of something. If I
> don't say something, I'm still guilty.

you can try answering the question rather than avoiding it?

That being did you know you were working a Fench ham out of their band?

you have been dancing around this post after post

>
> You're a twit.

you are a coward, afraid to answer and yet still trying to bully
everyone into accepting your claims

>
> >>>gee sounds like a cofession to me
> >>
> >>Izzat how they handle "cofessions" in your pagan flock?

> If you'd like to think of it as a religious service, fine. Happy
> Ramahannukwanzmas.

more mockery

only adds to weight of convincing that you KNOWINGLY worked folks out
of band

you chose to say anything to avoid answering the central question

The subject reactions to distress call yours and mine

>
> > I think you are sick for laughing at the Fact I would try to help
> > someone in distresss
>
> From you own tale of your experience with trying to learn morse, you'd
> be 1) incapable of recognizing that it was an emergency and 2) incapable
> of understanding what help was needed.

more of your pack of lies

You refuse to acept facts

It isn't hard to reconize SoS

Once reconized the action needed is clear, For me of course the
procedure is different I would record the signal for play back later.
Then I try ruing it though a computer decode, which should recover much
of the signal. or if not I send using the PC a sginal reequesting more
data I run it through until I have or find I can't read it with a
machine. If i can't read it then I start calling people who can read
the signal play it for them let them decode it and/or get them on the
Air to render more assistance than I can

So your satement "From you own tale of your experience with trying to
learn morse, you'd be 1) incapable of recognizing that it was an
emergency and 2) incapable of understanding what help was needed.", Is
a bald faced lie,and if you had any brains you'd know that.

the word you refuse to say, the answer to the question of when you
worked those out of band hams did you know they were out of band or
not. Not were you responible to know or any other evasion.

>
>

becuase you and all of them dance around the central quetion what did
you know and when did you know it

If You only learned afterward they were out of band then Find I agree
you were in the clear. If you knew before or during then it is another
matter

you dance and dance avoiding this question

did I mention a length of time for me "Tenure" on that band? nope!
oh yeah, I just love teh way you try to "poke a bear" by inferring that what I am saying isn't the "truth". Fact is, its my experience that CB is, for the most part, chaotic, unprofessional and NOT WANTED by anyone at FEMA, ARC (American Red Cross), EOC's everywhere, DHS (Dept. of Homeland Security) and the like. and my statement still stands: your "story" is a very rare exception to the rule (assuming its even the truth).
>>
>>where was this?

lies? hmmmmmmm. guess the truth hurts huh? when you start attacking the messenger for the message (calling him a liar, or by inference, implying that what he has to say "isn't the truth") is an old tactic. its generally a favorite among those of the crowd that belive that only their side knows the truth. you have yet to prove this to anyones satisfaction. please do so

now......

>>
>>then you didn't look hard enough.
>
>
> If ham radio was as prevalent in emergency communications as you and

its reality (and I really wish you would pay more attention to it). you seem
to reticent to swallow such a bitter pill. in fact, you shout it so
mightily I begin to wonder what your real agenda is for spouting it in such
huge volumes.

>>please try again... only this time, back things up with some sourcable
>>materials if you please?
>
>
> The facts are available right now -- you just have to observe them

What ever you were "Googling", Frank, it wasn't one of MY posts.

All of my MOS's except one started 63xx or 66xx. 8981 was the
fifth.

Most likely you hit one of Lennie's posts wherein he cited one of
his 1950's era MOS's...

> (UNSNIP)...and even if
> there was a typo on his DD-214 he would have known the -correct- MOS

Mark, you need to stop lying to this man.

LENNIE is the one who was the rear-area radio-clerk war hero who
has repeatedly, and OVERTLY attempted to "embellish his military
"career" by association with Soldiers who were KIA three years before
he was even inducted.

> Claims that his being a LPN in an ER quailifies him to dianosis people
> he has never met

And why do you make THIS lie?

I have NEVER claimed to "dianosis" people, as an LPN or otherwise.

> claims a LOT of ####

Nope.

"aisted"...?!?!

He didn't "assist" anyone. He was in Tanzania.

> > > Nothing has been to look absurd
> >
> > That's incorrect. Brian has been made to look absurd--but you're
> > gaining on him.
>
> not at all

Absolutely "at all".

The fact that YOU answerd the questions that I posed to brain and
subsequantly AFFIRMED that there was no way Dave could have been
"responsible" in the process says it all.

That you now try to make something out of nothing is all-the-more
hillarious!

> > > you are only making yourself lok more guilty
> >
> > Maybe you can explain how this can possibly be so.
>
> I doubt it, since you are clearly uninterested.

Uh huh...

> But in evading the important points over and over again, you make your
> self look guilty

YOU, LiarBoy, already addressed the "important points" yourself and
in doing so affirmed that no "crime" was committed.

> > > I do undersatnd slapped silly it just doesn't apply
> >
> > Then you haven't been paying attention or you do not understand the term

"ancing"...?!?!

Yes, Markie, you AND Brain have been "slapped silly" ...With the
facts.

That you keep trying to make an issue of something YOU have (1)
absoluttely no practical experience with and (2) have already yourself
acknowledged as having NOT been a "crime".

> > >>>But interesting no denail of the unlying facts

>
> That being did you know you were working a Fench ham out of their band?
>
> you have been dancing around this post after post

No, he's not.

He answered it YEARS ago and now you "show up" after a several year
hiatus, hear Brain banter it about as if it were current events, and
think you're "big money" by doing so.

You just look silly.

> > You're a twit.
>
> you are a coward, afraid to answer and yet still trying to bully
> everyone into accepting your claims

Why is anyone with documented facts a "bully" with you, Morgan?

More of that "victim" role you like to play, no doubt.

> > >>>gee sounds like a cofession to me

Nope. Sounds like he got it right.

> only adds to weight of convincing that you KNOWINGLY worked folks out
> of band

And only YOU would think so...

> you chose to say anything to avoid answering the central question

You "chose" to avoid accepting that he's right and you're wrong
despite your OWN stated opinions to the contrary a week ago.

Even Virginia? (Careful Eric, I'm setting you up here!)

> DHS (Dept. of Homeland
>Security) and the like. and my statement still stands: your "story" is a
>very rare exception to the rule (assuming its even the truth).

My "story" is no different than my "story" about the Mt. St.Helens
eruption in 1980, my "story" about hurricane Gloria in 1985, my
"stories" about Spokane's Firestorm in 1992 and Icestorm in 1996.
There are many other "stories" of small incidents that generally get

overlooked by the national news. And the reason you don't have those
types of experiences is because you live in Boringville, USA.

>>>
>>>where was this?
>>
>>

The fact remains: You have described your "experience" with some fires
in your area, claiming that CB was so chaotic it was useless. Then
after I described an exact opposite reality you asserted that "such
wouldn't be the case here in Phoenix". So make up your mind, Eric; are
you speaking from experience or just your speculative opinion?

>>>then you didn't look hard enough.
>>
>>

>
>claims? not claims. try facts (which is something you seem to lack a lot

>of).

I haven't seen any "facts" to support the claim ham radio is any more
important to emergency communications than CB radio. On the contrary,
I provided my observations during an emergency situation that is
-still- occuring. Instead of finding out how things work in the -real-
world you sit there and speculate about how such things can't happen.
Just how disabled are you, Eric?

## 1897. IEEE C95.1-1999

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-15 09:14:22 UTC
From: ralph <ralph@rome.com>
Message-ID: <1124097262.625280.229330@g49g2000cwa.googlegroups.com>
Source record: 116198

Hi all,

I will like assistance in understanding some of the number in C95.1,
especially on MPE.

In most cases for the controlled environment, the averaging timing is 6
minutes. So does it meant that we can only expose ourselves for 6
minutes?

Thanks.

Either you were a Marine or you weren't. Why the secrecy? Did you
serve under Colonel Vinson at Ft. Gordon or something?

>
>
> I don't know why anyone would keep their military service a secret
> (unless he's really Ollie North). I've always been up front about my
> service in the USMC:

For two reasons, Frank...

First and foremost is because we have another "regular" in the group who goes 180 the opposite direction...He >>IS<< every VFW's nightmare...the guy who "was there" when it's clearly obvious he wasn't. He's tried on several occassions to pass off as some sort of "accomplishment" that he was attached to a rear area unit in Japan that had several KIA's in Korea years before he was even inducted.

I served...I very well may have supported you at one time or another, but I was mostly a Left Coast/WESTPAC Marine at MCAS Tustin and MCAS El Toro. But I don't care to even appear to be in the same "...back when I was..." mode as he.

Secondly I don't see that service as germane to the discussion...I did let myself get caught up in one of Lennie's tirades and Brain won't let go of the fact that I won't discuss it any further.

As for folks who "claim" to be something they weren't, the guy you're buddying up to, Mark Morgan is a piece of work. Since you seem to have the same disdain for "wannabe warriors" as I, may I suggest that you Google some of his stuff from 1998/99. Look under "konstans"

or "KB9RQZ" in that time frame.

Markie claimed to be a Colonel in the US Army "Chemical Corps". Allegedly he thought this would "shut me up" since he didn't like having his OWN opinions disproven. He further went on to tell us that he was "drafted", even though he would have only been seven years old when the last US conscriptee was being DIScharged...When I busted him on that, he later backed off and said he was "only" a "lieutenant".

The story got even MORE hillarious when he reveraled that he is gay/bisexual, and that his "CO" refused to release him from active duty due to the critical nature of his MOS.

Now his story is even more convoluted with some obscure claim of having been an enlisted man, but we're not even sure enlisted in "what". Of course his ever widening stories of "threats", "bullying", etc etc are RRAP classics.

So...before you bestow "wannabe warrior" on me, please take a moment and consider from whom you're getting your "intel" from. "Credible" is not an adjective I'd apply to Mark C. Morgan.

Semper Fi

Steve, K4YZ

Well, Markie...Glad you were able to hire someone to "support" you!

But perhaps if "Frank" had been paying attention, by riding you about your horrific abuse of the King's English, you've enjoyed a 62% IMPROVEMENT over your typo rate of only a month ago.

I know...It sucks to think I actually forced you to do something CONSTRUCTIVE, huh...?!?! Even worse to have to admit that I was successful, eh?

You can thank me later.

>Yep. It's been a long day.

I now see the source of my confusion -- those posts would have been a
lot easier to read (i.e, figure out who said what) if you had learned
a little earlier about the standard newsgroup quoting protocol (using
an arrow, >, at the beginning of a quoted line).

Now that I have your posts figured out, I see that you do (or did)
tend to brag quite a bit about being a Marine. Hey, I do it myself.
But out here with the civilian crowd it's much easier to speak in
reference to subjects that -they- are familiar with -- the USMC -not-
being one of them. When you cram your military service down their
throats, many of them see it as having an elitist attitude. It's not
your fault, it's not their fault. Wanna blame somebody? Blame the

government -- they tell the military to recruit kids, culture-shock them into hard-core killing machines, then when their service is completed dump them back into the civilian population without any sort of de-programming or re-integration phase. It's not so suprising that there are a disproportionate number of homeless people that are vets when you realize that most of them simply never adjusted to civilian life.....

Anyway, I'm done ranting. Looks like you have been in a flame war with this guy for over seven years..... do you actually enjoy it? Do you think you are winning? Or haven't you ever heard of a killfile?

Just curious that the only "Frank Gilliland" I can find in FCC
files had his license expire over 2 years ago.

Unless it's a middle name or someone forgot to drop a new 610
(605)?

Odd...I've never seen KY4Z post here.

And Markie...

...it's "braggard" and "alleged"...

Neither of which is true.

More snipo of stuff boyo just made up to make himself feel
better....

> Of course the most likely possiblity is that stevie is just lying ,
> again

In order to have been "lying again" there would have had to have
been a first time.

Thanks for stopping by almost eight years later and letting me
know, Frank.

> Now that I have your posts figured out, I see that you do (or did)
> tend to brag quite a bit about being a Marine.

I guess everyone sees things in degrees, Frank...I have tried to keep an objective mind after re-reading some of my old posts andjust don't agree with you. Yes..I let folks know I was a Marine...But NOT at the point of being "braggard" about it.

> Hey, I do it myself.

We did earn it.

> But out here with the civilian crowd it's much easier to speak in
> reference to subjects that -they- are familiar with -- the USMC -not-
> being one of them. When you cram your military service down their

Again...I don't see myself having "crammed" anything down anyone's throats, Frank...No more than their lies and deceit have been shoved down mine.

> It's not

Thankfully it's not been a contiguous seven years. Markie was gone for the longest time. That pretty much left us with Lennie and Brain. I see my exchanges with them as being somewhat cathartic.

So..are you the N0IGZ that's expired? If so, why'd you let the ticket lapse?

>
> look at them

Must have taken you the better part of an hour to copy that
without typo. Tiring, eh?

> Stevie think the rest of us Owe HIM respect despite the Fcat he has
> done nothing to earn it

OK...what's an "fcat"...?!?!

And I'd be interested on where you think I said anyone "owed" me
anything...?!?!

I said I think lying is one of the rudeist things you can do.

Only you would think differently.

> and what he demands is stupid.

I didn't demand anything.

There's not one word of "demand" there, Markie!

> he claims Lying is the rudest thing you can do

No, I did not.

I said it's "one of the rudeist..."

That leaves a whole lot.

> I can certainly see why he does not think anything of threatening
> MURDER

I don't think about it because I've not done it. I have no reason
to do it. You continue to flatter yourself that you think someone
would hazard their freedom to physically harm you.

> Personaly I think threatening Murder is pretty rude

It is rude. Who did that?

> I think threatening to talk to someone perants about their son's
> alleged crimes and aleged sexual orientations

"perants" "aleged"

Nothing "aleged" about Todd's orientations. He's just not reached
that "comfortable space" where he can admit it. I am sure all the
"aunties" in his former web page would have a stroke to know that Todd
would rather pack fudge than court a lady...or even worse that he may
be courting a lady to hide the other...

> These aren't rude things according to Stevie, and they aren't his fault

You have another issue...One with "finding fault", Markie...

Many, many issues.

Little if any resolution.

Steve, K4YZ

No I didn't. Never said anything of the kind.

Quote a post, please.

> and indeed IF there was evidence I was In your word "a Danger to myself
> or others" they would all but insatnly

"instantly"

All but "insatnly"...WHAT...?!?!

A bit too confused to finish your sentences, Markie?

> Since you are making claims just what have you Allegedly done

Nothing "alleged" about it.

But not for discussion here.

If anything's to be done, you'll get first-personal experience.

> The subject reactions to distress call yours and mine

He just doesn't get it, Dave.

Or is it that he's just been hearing those little voices for so
long he COULDN'T hear the distress call?

> > > I think you are sick for laughing at the Fact I would try to help
> > > someone in distresss
> >
> > From you own tale of your experience with trying to learn morse, you'd
> > be 1) incapable of recognizing that it was an emergency and 2) incapable

>
> more of your pack of lies

Nope.

From the archived words of Mark C. Morgan, KB9RQZ.

YOU said you COULDN'T DO IT.

Unless, of course, you're now changing your story and claiming you
CAN learn Morse?

> You refuse to acept facts

You refuse to use a spellchecker.

> It isn't hard to reconize SoS

It is if you don't know Morse Code.

> Once reconized the action needed is clear, For me of course the
> procedure is different I would record the signal for play back later.
> Then I try ruing it though a computer decode, which should recover much
> of the signal. or if not I send using the PC a sginal reequesting more
> data...(SNIP)

If you can't copy code without the computer, how are you going to
send it?

> I run it through until I have or find I can't read it with a
> machine. If i can't read it then I start calling people who can read
> the signal play it for them let them decode it and/or get them on the
> Air to render more assistance than I can

And by the time this has all transpired and you've spent a couple
hours banging out your dreck in RRAP due to your frustrations at not
knowing if it was a distress signal or Dave and I talking about you,
the ship has gone down with loss of life. Too bad, too...There was a
tanker only 10 miles away that could have diverted and assisted...

> So your satement "From you own tale of your experience with trying to
> learn morse, you'd be 1) incapable of recognizing that it was an
> emergency and 2) incapable of understanding what help was needed.", Is
> a bald faced lie,and if you had any brains you'd know that.

He does have the brains. He very aptly pointed out that you have
not learned Morse Code and as a consequence can not respond in a prompt
and meaningful manner.

> becuase you and all of them dance around the central quetion what did
> you know and when did you know it

There's not dancing.

Just you trying to shift the dance floor while the music's still
playing.

> If You only learned afterward they were out of band then Find I agree
> you were in the clear. If you knew before or during then it is another
> matter
>
> you dance and dance avoiding this question

In either case, he's "in the clear".

Dave had NO OBLIGATION to know who was in or out of the bands per
THIER administration's requiremments.

None under US law...None under Tanzanian law...None under
International law.

Which means YOU haven't got a leg to stand on.

Have a nice day.

Who said Frank is in the FCC database? As far as I know he's not a ham
radio operator. That doesn't make him "anonie", does it?

But Brian...YOU are the one who's lambasted others in this forum
about not having a proper sense of humor.

Was that previous assertion false, or are you just changing your
rant to match the situation at present?

If it were "misent", how would one know it were a distress
call...?!?!

> I think you are sick for laughing at the Fact I would try to help
> someone in distresss

It's not about you trying to help...It's about you whirling around
in your chair, ensnared in recording tape, trying to run and re-run the
tape to figure out what was being said, now hours ago...

He didn't help anyone break any law...At least no law YOU have
been able to produce. And we've asked you over and over with ample
opportunity to respond to cite such a law.

You haven't.

You can't.

It doesn't exist.

There's no one best way for everyone, but here's one idea:

Demos. Show folks how it's done, rather than talking. This can be
a display/talk/station setup at a hamfest, a club meeting talk, a
website, or a magazine article, just for starters. Then there's Field
Day, a whole weekend of demos.

>He ordered me to take my H/T every time we went to the field from then on.

Tsk, tsk, highly UNlikely story for the 1972 times.

You'll have to be more clear on that location. "Feldburg" could
be 'Feldberg' or even 'Frieberg' or 'Freiberg.' Was that in
Bavaria or elsewhere? In 1980s, Feldberg-Schwarzwald was a
troposcatter station from the north-central part of West
Germany with relay to Italy; before that it was part of the LOS
microwave multi-channel relay system.

Frankfurt was, may still be, USAEUR-Germany Hq and would be
roughly 150 miles north of Feldberg-Schwarzwald (I don't have a
good map of the FRG at the moment). Bavaria borders Austria
and Switzerland as well as part of East Germany; in 1972 the
German unification was still distant in time. It is HIGHLY
DOUBTFUL that there would be: 1. Ham HTs good enough or
inexpensive enough for a GI to get (even with NCO and overseas
pay) in 1972; 2. Permission to USE one IN THE FIELD, certainly
on a "command track" (field Hq vehicle) that close to
unfriendly territory.

"Command tracks" (field Hq-Commo vehicles), presumably the
kind with all tracks and not wheels, but the name applies
to the fitted Bradleys of the 80s and 90s...all had lots
of radios...and antennas, that making them easier for
"other-side" recon units to spot. In 1972 the radios
normally in such field Hq-Commo vehicles could hack
up to 300 miles on NVIS cloud-burner bounce; the technique

was already known then (Rommel's Afrika Corps knew about it in 1942 and that is documented). I can't believe an armor unit has been rendered as radio-SILENT as you say, not even with 1972-era radios in the U.S. Army.

Sorry, but use of REPEATER techniques, particularly UN-manned repeaters, was pioneered by the U.S. Army in Italy in late 1943, then used in France and Germany 1944-1945, starting with the SCR-300, the VHF FM Voice manpack called the "Walkie-Talkie." There's a specific repeater connector on the front panel of every BC-1000 ever made just for that purpose...designed-in by Signal Corps request when the contract was signed with Motorola. With REPEATERS, those can very easily operate WOTHOUT operators "operating" things (taking any active part in the repeating process of the radios). Repeaters are DESIGNED to operate unattended.

1972 was THIRTY THREE years ago. By all appearances you've done considerable "editing" of the ACTUAL FACTS surrounding your field commo adventure. MANUFACTURING the story is more likely.

>alright, he's a wannabe warrior.

Errrr, Frank, the "281.6 MOS" was an ARMY MOS and existed from
1954 to some time after 1956...before that it was "1419" under
an older ARMY numeric designation. Stebie NEBBER had one like
that. I had both of them and the "281.6" is on MY DD214. :-)

If you want to see where that 281.6 MOS was used, download:

http://kauko.hallikainen.org/history/equipment/stations/My3Years.pdf

As you were...

Nope I said I can't when restricted to just the use of my ear

>
> Unless, of course, you're now changing your story and claiming you
> CAN learn Morse?

nope No need to learn Morse in order to use morse

Even Jim adknowledges that

>
> > You refuse to acept facts
>

By using the computer to do so

I have done so many times

Indeed a FD station where I was doing so may even be in Your log

>
> > I run it through until I have or find I can't read it with a

wel you yea sure it would take me longer, never diened that and yea if
the ship is sinking fast I may not be able to help, butAt least I tried

>
> > So your satement "From you own tale of your experience with trying to

dpends on how well the morse was send if the operator was good I can
turn it around in acouple of minutes if it is bad then maybe an hour

But I could respond in seconds tell them someone was trying to decode
and tell em things to do in sending there signal that would help my PC

to copy

Bullshit No one use tape certainly not for anything of import, My pc
would record digitaly

Even Jim admits you can work CW with by PC, maybe not as well but not
as well beats nothing to distress call

Message-ID: <1124127079.396942.121160@g44g2000cwa.googlegroups.com>
Source record: 116231

well It is after 1 pm well over 24 hours since stevies promise of
action

his promise that it, it would do more than anoy me.

Nothing.

Not even a call from someone asking about geting some cock and bull
story

from stevie alleged proof and promises nothing

Guess it is like you 7 hostile actions

## 1931. Re: stevie too stupid to ntice he being insulted

Newsgroup: rec.radio.amateur.policy

All depends on you difenation of often, but I did say regularly I
alamost always hit Stlouis a certain times of years same for Indy

Never heard anyone say "Audio", heard Good buddy and negatory though

So what?

Do you have your panties in a wad over "Good Buddy" and "nagaory"?

grow up

No in simple terms

It is a reminder that RF exposure is not guaraunteed safe (various
folks are argueing about the what all the data means

Learn it for the test

for real ham radio well put your antenans away from with nice long deed
lines and place things like metal roofs between and the antenna in
mobile stations

If you are asking about pro engineers find an Engineer that can think
and ask for advice, but still learn it for the test

# 1938. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-15 19:45:31 UTC
From: LenAnderson@ieee.org
Message-ID: <1124135131.758207.13980@g49g2000cwa.googlegroups.com>
Source record: 116239

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of 12 Aug 05 (corrected on 15 Aug 05), WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1455

Indeterminate/duplicates (note 1) 62

Unambiguously Against NPRM (note 2) 391 28.07%
Unambiguously For NPRM (note 3) 811 58.04%
Code test ONLY for Extras (note 4) 191 13.71%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

3. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 12 Aug 05 that would be 1393.

Note: This post revises my similar posting on 13 Aug 05 due
to the FCC adding 18 additional documents in the ECFS for
12 Aug 05 by 15 Aug 05. That is not uncommon in all dockets
and other issues open for comment.

As of about 2:30 PM EDT on 15 Aug 05, there were 129 entries
for 15 Aug 05 and those will be expected in increase up to
midnight with, possibly, additional entries for 15 Aug 05
appearing on the ECFS the next day. The scorecard will be
updated to reflect those numbers.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

yes non

I think you have it wrong, Frank. I believe the typical ham attitude
is: If you aren't a ham and persist in posting material about the
wonders of CB radio in an amateur radio group, *then* you're nobody.

Dave K8MN

>>don't say something, I'm still guilty.
>
>
> you can try answering the question rather than avoiding it?

I could, but I'll let you do some work and Google up the material
instead. The research should keep you busy for a week or more.

> That being did you know you were working a Fench ham out of their band?

What you should be asking is: When I was running a pileup *in* my
allocated band segment, was I ever, in any way responsible for the
operations of any French radio amateurs?

> you have been dancing around this post after post

So you say--but you're a twit.

>
>
>>You're a twit.
>
>
> you are a coward, afraid to answer and yet still trying to bully
> everyone into accepting your claims

Brian made claims regarding me. Charge him with cowardice, being afraid
and attempting to bully. I've had about enough of your silliness. If
you said any of the things which you've just written in a face-to-face
encounter with me, you'd have a sore nose and be sitting on the floor,
shrieking that I'd attacked an innocent handicapped individual.

>>>>>gee sounds like a cofession to me

>
>
> more mockery

Yes, it is. You're one messed up doofus, Colonel.

> only adds to weight of convincing that you KNOWINGLY worked folks out
> of band

That's interesting. You're a pagan, bisexual S&M freak who has
repeatedly told whoppers about his military service. I laugh at you and
that supposedly confirms some idiocy spouted by Brian Burke. You're no
mental giant, Mark.

> you chose to say anything to avoid answering the central question

Central question? It is no more central to my life than you are, Colonel.

Dave K8MN

> you know and when did you know it

I think you should arrange some sort of Senate Inquiry and we can all
get to the bottom of this.

> If You only learned afterward they were out of band then Find I agree
> you were in the clear. If you knew before or during then it is another
> matter

Perhaps you didn't understand what I wrote earlier. I don't care what
you believe. Others have attempted to correct your erroneous thinking.
Their attempts were in vain.

> you dance and dance avoiding this question

Now you have me dancing. Earlier, I was guilty because of silence.
You're a twit.

>wonders of CB radio in an amateur radio group, *then* you're nobody.

That's one of the difference between holy-hammies and CBers; the
holy-hammies begin their statements with "I believe....." while the
CBers start with "The facts are.....".

And the facts are that his discussion began in -this- newsgroup with
the thread "Emergency communications", where some CB-hating hams
crossposted their highly subjective and speculative opinions to rrcb.
I'm just here to set the record straight. If you don't want CBers in
this newsgroup then quit crossposting your anti-CB garbage.

True story. I know quite a few -decent- hams and I actually encourage
people to get their license if they show the interest. It's the few
hams with a holier-than-thou attitude that makes amateur radio so
repulsive to the rest of us.

I was poking fun at the person who says we must do such and so without
offering any solutions of his own. He's trying to throw it "over the fence"
to some one else to solve. When I identify problems, I come to the table
with several possible solutions to debate and welcome input from all
participants. But I do not particularly care for the approach of some one
saying "its a problem but YOU do the work."

No problem with hearing them out but when you have ten different and quite possibly opposing expectations, needs, and wants there is no way that everyone is going to be satisfied with the results. This is demonstrated on an almost daily basis.

1) Because he had appointed capable people to act in an emergency in his immediate absence.

2) Because it was good to take time and show the enemy that all they managed was a slight annoyance.

3) Because he was right in the middle of things.

4) Because in the back of his mind, he was planning an appropiate response and he could plan there are well as anywhere else.

5) Because he wanted people like you to wonder about it the rest of their lives, and keep asking...

Dee:

I don't think you have to explain. It is plain that those against change are into the ploy of attack the person advancing the change, list everything wrong, submit NO ideas for change, ignore, play dumb, hope it all goes away, keep it a close door group, etc, etc...

You really don't have to take time to explain, we can work withing that framework...

The demo/display/talk at a hamfest is a good idea as this has a chance of getting those hams who don't belong to clubs. As far as websites go, there are already so many (some are very good) that I think additional websites may get lost in the crowd so to speak. Our club already has a presentation at almost every meeting so at least our club is already covered here.

I'm really thinking in terms of the many hams who are not involved with any groups. That could be a large percentage. "Elmering" them over the air could be miscontrued yet they too will need help to succeed in a smooth transition.

Perhaps you should read "Stolen Valor" and find out what happens to
people who make up war stories.

... perhaps we should focus on amateur radio and forget pseudo-military,
spys, secret agents, morse freaks planning on saving the titanic,
boring-ancient stories, etc, etc...

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=19129

Then-Attorney General John Ashcroft testified at the 9/11 Commission's grandstanding hearings that one of its own commissioners, former high-ranking Clinton Justice Department appointee Jamie S. Gorelick, had been the prime architect of one of the problems for which the commissioners regularly denounced the Bush administration: the wall between intelligence agencies. Her infamous 1995 "wall" memo produced much of the harmful lack of intelligence coordination that the Commission then used to criticize the Bush administration.

...the intelligence wall Deputy Attorney General Gorelick put in place smothered ongoing investigations into Chinese contributions to Bill Clinton' s presidential campaigns. Specifically the Department of Defense and the CIA were prohibited from exchanging relevant information with the FBI.
...
Not all were happy at the time with Gorelick's action. Gutsy New York City-based U.S. Attorney Mary Jo White was appalled by the Gorelick directive, sending two of her own memoranda back to Janet Reno and Gorelick protesting, "The most effective way to combat terrorism is with as few labels and walls as possible so that wherever permissible, the right and left hands are communicating." Her recommendations were ignored. According to the New York Post, White was so incensed by their actions that she wrote a second, scathing memorandum warning that the "wall" hindered law enforcement efforts to combat terrorism. "It will cost lives," she reportedly warned. This second memo is still kept secret.
...
This inaction seemed to fall into line with the Clinton administration's general disregard for terrorism. Although the discredited former National Security Council staffer Richard Clarke presented President Clinton as an anti-terrorism warrior, former intelligence officer Ralph Peters tells a much different story. "Admitting that [terrorist] threats were real.threatened to destroy the belief system the Clintonites had carried into office," Peters detailed. In regards to the entire terrorist network, methodology, and ideology, the Clintons were "a textbook case of denial." It was bad enough, as the "Able Danger" reports indicate, that the Clintons were willfully ignorant of the threat but their criminal negligence was compounded by a sleazy attempt to pass the buck on the Bush administration. Bill Clinton never made any serious retaliation for any of these provocations, nor the 1993 World Trade Center bombing, emboldening these terrorists, assuring through his "intelligence wall" that 9/11 terrorists could not be properly identified and apprehended, and passing the blame for the inevitable outcome of his policies to the nascent Bush administration.

If there was, in fact, covert direction from the top of the Commission to key members of its staff to cloak any link between Saddam and the September 11 attacks, to obfuscate evidence tying the Iraqi regime to al-Qaeda and Mohammed Atta, and to paint the most positive possible picture of the Clintons as implacable terror-warriors, then "Able Danger" had to be ignored and covered up. It fits the pattern of revisionist historical interpretations that seems to be the only authentic legacy from the Clinton years.

By acknowledging the Iraq/al-Qaeda ties, not only to terrorism in general but to the September 11 attack, the war becomes completely justifiable as exactly what the Bush administration claimed it was: a defensive, if preemptive, war to protect the United States from a regime with cordial ties to anti-American terrorists. This outcome is so repugnant to the hard Left that it will justify even the most extraordinary suppression of evidence or promulgation of an outright lie in order to achieve its ends.

This is a critically important story that demands public attention. It will not be seriously investigated by many reporters, because the mainstream ( read: leftist ) media is not interested in exposing how its favorite president in decades enabled terrorists to pull off the worse act of domestic terrorism in U.S. history.

David completed a circuit that was illegal.

But it's not that he unwittingly completed an illegal circuit, but that
he would knowingly do so again.

# 1973. Re: A Sample Of The Supporters Pro-No-Code WT 05-235

All you EXTRA MORSEMEN ought to be PROUD of a fellow EXTRA, N9KKY, David G. Brink, now listed under WT Docket 05-235 in the ECFS as received on 8 August 2005 and added by the FCC on 15 August 2005. A one-page scrawled hand-printed and very shaky written name signature dated (by the sender) as 31 July 2005, a Sunday. No doubt that Sunday featured some slightly excessive imbibing prior to scrawling this magnificent missive.

The sender is age 46 with address given as Mount Prospect, IL, Cook County (Chicago is in Cook County). Not exactly near Indian Territories...perhaps he just got his reservations cancelled and is feeling angry? :-)

Tsk, tsk, tsk...all you ARRL-fearing, morse-loving EXTRAS ought to feel sooooo PROUD to have one of your BRETHERN demonstrate their innate "superiority" in communicating their thoughts! Not to worry. The rest of you EXTRA morsemen can go right on making Oh So Much FUN out of all those "not like your noble-nesses" and picking on all with disabilities.

dis dat

In other words you refuse to answer

meaning you are mostly likely guilty

BTW you have more than 2000 posts in google, inclduing some sexualy
sugeestive flirting with a married women not you wife it seems, just
which of your many post are you reffering

I went looking can find you answering the question

You could have cleared this up with the Word Yes or NO but you refuse

Indeed you choose to type far more words than required evading the
answer

Brain for my own info. are you claiming in that Dave Knew when he made
the contacts that they were out of band, or has he never answered that
question at all

It's interesting to note the parallels in the former Yugoslavia
invasion and the Iraq invasion.

One had absolutely no national interest to the USA, the other had vital
interest.

One had rumors of genocide, the other had rumors of weapons of mass
destruction.

One had Haliburton as a no-bid contractor with lots of cost overruns,
the other had Haliburton as a no-bid contractor with lots of cost
overruns.

One allowed the country to fragment into four or more independant
states, the other is trying to hold together several diverse states.

One invasion of no national interest was applauded by the the left, the
other of vital interest.... is condemned.

> has a chance of
> getting those hams who don't belong to clubs.

One thing that generates interest is to see stuff
actually in use. The AM folks in these parts have
gotten into the idea of setting up a demo station
at big hamfests like Gaithersburg. They use classic
hollow-state gear, and show what both the gear and
the mode are like. Usually it's a group effort, so
the station is always on the air and nobody has
to bring a complete setup.

Another venue is specialized events like air shows.
Some military-radio collectors set up a demo and
display (with permission of course) and show the
radio gear in action.

> As far as
> websites go, there
> are already so many (some are very good) that I think

> may get lost in the crowd so to speak.

I think there's always room for more *good* online info.
The big challenge is making it easy to find.

> Our club already has a presentation
> at almost every meeting so at least our club is already covered > here.
>
> I'm really thinking in terms of the many hams who are not

> groups. That could be a large percentage. "Elmering" them over > the air
> could be miscontrued yet they too will need help to succeed in > a smooth transition.

That's a classic problem. But if the advice is offered the right
way, most folks will take it.

That's funny. I checked to see if your post had gone to other groups
before I responded. This was the only newsgroup indicated. There goes
your perfectly good rant.

Unlikely you say? How is that ? Because YOU didn't see it. Because YOU
have NO KNOWLEDGE ABOUT AMATEUR RADIO other than what you conjure up in your
distorted mind?

> You'll have to be more clear on that location. "Feldburg" could
> be 'Feldberg' or even 'Frieberg' or 'Freiberg.' Was that in

>

The Feldburg Amateur Radio Repeater, located in the Frankfurt area. Our
normal field site was towards the Fulda Gap area.
>

>In 1980s, Feldberg-Schwarzwald was a

This is the place, I remember the microwave site up there in the 70s.
Great place to play with my two meter Handi.

I could care less about the 1980s in Germany. You know full well I was
discussing the 70s time frame.

> Frankfurt was, may still be, USAEUR-Germany Hq and would be

> pay) in 1972;
>
A Handi Talky made by Standard Communications was available, its
nomenclature was SRC-146A. It ran about 2 watts output using 10 Nickle
Cadium 1.35 volt cells. All this into either a telescoping whip or a rubber
duckie. You could, of course, also use standard AA cell alkaline if you
wanted to. It had five (5) crystal controlled channels, for a total of 10
crystals required.

The German repeaters ALL operated with a "whistle up" tone access. Just
whistle it up and start to talk. Of course a Amateur Radio license was
required. And a German call. Mine was DA2LJ.
>

2. Permission to USE one IN THE FIELD, certainly
> on a "command track" (field Hq vehicle) that close to
> unfriendly territory.
>

Not a problem at all. I showed my CO the German License, my US License,
and my MARS license. And after he seen it in action, he told me to KEEP
bringing it.

Being close to "unfriendly territory" was not a problem at all. You NOT
BEING a ham of course, would not comprehend these things.

> "Command tracks" (field Hq-Commo vehicles), presumably the
> kind with all tracks and not wheels, but the name applies
>

I forget the nomenclature of the "Command Track" but it was basically a
double decker M-113 carrier.

It was big enough for lots of radios and several troops.

Being the ranking NCO I was also the track commander. Giving me the
"pleasure" to ride with my helmeted and usually masked head out of the hatch
to guide the driver.

>
There it is guys, Lennie showing not his ignorance, but his stupidity. He
sits there in front of his keys and decides everything based on incorrect
assessments. What a world class dumbass.

Do you remember the Vietnam War Lennie? The US Army in Europe was at the
bottom of the list on new goodies. You can figure that out, right? Now
let me address your ignorance further;

USAEUR was assigned blocks of frequencies by the German government. Some
not in the best spots. A local commo officer then determined which ones to
use at what time and on what day/night. Normally these comm officers had no
knowledge of things like "skip", NVIS, or groundwave. Not to mention
broadcast QRM (Short Wave). So it was a shot in the dark if any frequency
chosen would actually work for the distance, time, day/night that it was to
be used.

For some reason the comsec officers liked to put us in the 2 Mhz range at
night, and the 7 as an alternate. 2 would work, but for the way to short
whips. And no we never bother to deploy the GRA-50s.....you DO know what
they are don't you?

The 7mhz was eat up with broadcast QRM, so forget it. And the 2 never got
out of the woods.

The reality of it was this; Using 100 watts output on RTTY (RATT in Army
Speak) into a 15' metal whip and sitting in the GAP you were damn lucky to
make commo with your units, especially at night. Sometimes you got lucky.
Not like today I am sure.

The most reliable commo was usually on the 40 mhz range FM VRC-12 units.
Range was extended by deploying "radio relay teams" to hilltops to act as a
manual repeater.

RATT Short Wave Commo was spotty to say the least.

Believe it or not...I was there...you were NOT.
>

None of which was available to any of the ARMY units I was with in Germany.
And what you said has NOTHING to do with what I said. AMATEUR RADIO
REPEATER OF FELDBURG. At least TRY to stay on topic Loser.

They were as follows; 23rd Engineer Battalion, Hanau FRG (Federal Republic
of Germany)

1st Squadron, 11th Armored Cavalery Regiment, Fulda, FRG.

143rd Signal Battalion, Frankfurt, FRG.
>

The one with no vital interest had wide support across many countries. The
one with the vital interest (oil) had a couple of countries (of meaning)
supporting it.

It would appear that davie "worked" four times as hard as you did,
Brian...all for just one contact. :-)

>> I have no memory of those QSOs but I'll bet you were
>> treated courteously.
>
>No doubt the out of band Frenchmen were treated courteously as well.

Pity that "courtesy" doesn't manifest itself in OFF-air
behavior...

Of course, one must take into account davie's perception of
"courtesy"...being nice to folks who agree with him... :-)

But, the question remains: If davie has "no memory of those
QSOs," how can he state positively that he had FOUR with you?
Little inconsistences like that paint him dubious...a good
color for him but vague and shifting when the light hits it.

>> If you requested a QSL card(s) via WA8JOC and

A smooth transition? I don't know who you think is expecting that,
certainly not any Techs I know, they are expecting anything but smooth.
most are expecting to be insulted and put down , and then told how to
operate

I am marginaly involved in the local club the only tech class they see
on a regular basis, and it is clear by how certain folks suddenly stop
talking whne I wander near (with sharper ears than most, I had to get
something to compendsate for my lousy writing) it is clear the biggest
barriar to a "smooth" transition is most likely the folks already on HF

Some techs are cluessless and need hand holding (as do some extras,
general etc) most that have stuck arround a bit are pretty
resuourcefull and fairly pataint

Talk is quite inexpensive. To point out what the problem is, and with
no solutions - or offers to enact solutions is great work if you can get it.

I worked with a guy once who used to say "My position in life is to
point out the shortcomings of others." And he was serious.

Yup. When I was the prez of the youth hockey league, there were several
times when I was pulled aside by both sets of parents in disputes with
threats to sue if my decision didn't go their way.

AOF:

You know, you have a point there. To tell you the truth, the full impact
just brought me awake alike a slap in the face!

Those ancient HF's with their fondness for mimicking pseudo-military
communications, dreaming of saving-the-world-with-a-brass-key and
using army protocols are going to wage a war like
all-hell-has-broke-loose. And, while providing some entertainment, is
likely to result in complete chaos!

May take a decade just for the flack to clear the air...

That is correct. The ability to point out a problem is in no way related
to the ability to do something about it.

> First decide where you are going. That in itself may be a

I don't know about you, but when I deal with people who consistently
point out problems, and don't offer any solutions, I end up listening to
the people who point out problems, and then DO something about them.
It's a lot easier. Not to mention it works.

The all problems no solutions people sometimes seem just like people who want to grouse.

A coment about the land fromerly making the nation of Yugoslavia

2 of the nations Serbia and Montenegro had been independant state when
jioned into Yugoslavia, Croatia, had been egeaged in effort to achieve
its fredom from the KaKa as the Hapsburg empire was known when
Yugoslavia, was formed Macedonain had been part of the Turskish empire
til it was thrown into the mix So Yugoslavie born aprox 1919 of peices
of 4 prewar nations died in the 1980's by spining it various parts,
back apart again

Dee:

Yes. I agree, and now we must do our part and bring the word that there will not be a element 1. And, help those with an interest in radio to the amateur bands. But, this all depends on no code, so there is a lag while we wait.

It doesn't take much to do a lot, every amateur bring one new licensee in, we double the numbers, two we triple, etc.

Frankly, it is quite exciting! But, it would probably be too optimistic to expect everyone to participate, some may be "sour grapes" and drag their feet, leaving some to do more...

The club here is dominated by "save the code" types, I am not popular there at all and some just avoid me. Hopefully, this will change... probably not, my hide is thick. <grin>

I love it. The Repooblicans screw up royally and keep spinning into "blame the Democrats".

ROTFLMAO

How's the price of gas?
Hear a big flushing sound as jobs disappear?
Ever wonder why 9 of the 13 hijackers were Saudi's and yet Bin Laden's relatives were allowed a flight out after 9-11 when the air space was shut down?
Ever think how much Bush might have invested in common with the Saudi's?

OMG, this is *way* too much.

Don't you love the unbalanced budget? Much better than a balanced budget with Clinton. What Clinton did in the Oval Office was nothing compared to G. W. B. and company.

Trust me; history is not going to be kind to Bush. Assuming our descendents are still here, of course.

Jim:

You are most likely right about bush. I big money, corporate superpowers and those otherwise keeping pockets full are the real bosses. They play us for dummies.

What in your personal life got better under clinton? What in your personal life got better under bush?

Do you really think I hold hope in any man they stick in there? It is the people who have to stand up to the plate and control their employees. Would help by grabbing a couple, investigating what is obvious and toss them into prison if they are committing crimes against american citizens. I think many are thinking on how to do this, frankly, I feel kind of powerless.

About the best I can do is acknowledge there is something rotten going on... and a general knowledge that "something-ain't-right" just isn't good enough... be a help if we could just make the news start doing their job again... telling the truth...

As One of them over the years I thank you for your gracious words. They
have been rare from the "Other Side"

I point out the the Nocoder took the Treaty and FCC and won now we just
have to deal with HF, forgive me if it this flip but I think HF will
pose an easier task.

Playing with ham radios while on field maneauvers of a U.S. Army
armor unit? For "Army business?" HIGHLY UNLIKELY!!!

> Because YOU didn't see it. Because YOU
>have NO KNOWLEDGE ABOUT AMATEUR RADIO other than what you conjure up in your
>distorted mind?

Take a trank, Dannie Disabled, settle down.

I realize that YOU think ham radio is super-secret stuff which
can't be revealed to the outside world, but that is NOT so.
But, you are totally confusing ARMY communications with your
ham hobby activies and that is NOT good for the U.S. Army.

>> You'll have to be more clear on that location. "Feldburg" could
>> be 'Feldberg' or even 'Frieberg' or 'Freiberg.' Was that in

To your credit you got a bit closer geographically. Just try to
remember that not ALL who read in here have traveled in Germany.

The "berg" in a German location name is generally referring to a
a mountain (or large hill) while the "burg" in a German location
name denotes a town or city (e.g., "Hamburg").

>> In 1980s, Feldberg-Schwarzwald was a

>This is the place, I remember the microwave site up there in the 70s.
>Great place to play with my two meter Handi.

With absolute freedom of hobby enjoyment from your battalion's
signal officer, no doubt...no interference checking or even
M.I. checking to see if you were communicating something you
shouldn't have to the "other side?"

>I could care less about the 1980s in Germany. You know full well I was
>discussing the 70s time frame.

Tsk, I wasn't shifting time (Miccolis does that). There has been
considerable Signal activity in Germany ever since the Occupation
and I've seen several eras' plans of USAEUR communications from
1945 on through Ace High to the reunification of Germany.

>> Frankfurt was, may still be, USAEUR-Germany Hq and would be

>> pay) in 1972;
>
>A Handi Talky made by Standard Communications was available, its
>nomenclature was SRC-146A.

That must have been its CIVILIAN model designation. The "SCR"
nomenclature ceased about 1945 along with the "BC" specific
item nomenclature. No doubt you will say "the Army bought it
for you?" :-)

>The German repeaters ALL operated with a "whistle up" tone access. Just
>whistle it up and start to talk. Of course a Amateur Radio license was

>required. And a German call. Mine was DA2LJ.

Did you communicate Army information over a German CIVILIAN
amateur radio repeater? [M.I. wants to know...]

>> on a "command track" (field Hq vehicle) that close to
>> unfriendly territory.
>
>Not a problem at all. I showed my CO the German License, my US License,
>and my MARS license. And after he seen it in action, he told me to KEEP
>bringing it.

Right...and your "CO" never checked up on that, ever? ASA
didn't check up on you? [ASA was still in existance in 1972]

>Being close to "unfriendly territory" was not a problem at all. You NOT
>BEING a ham of course, would not comprehend these things.

Tsk, tsk, tsk. I was NEVER in Bavaria in the 1970s. But, I was
IN the U.S. Army in the 1950s and as a civilian engineer working
for civilian contractors engaged in Department of Defense contract
work from the late 1950s on through to 1989. Dannie Disabled,
I've had a bit MORE investigation by the U.S. government on
SECURITY matters (including background checks for Top Secret
and "Q") for the simple reason that I've been around longer than
you have. Don't try this Tuff Guy bullshit with me.

>> "Command tracks" (field Hq-Commo vehicles), presumably the
>> kind with all tracks and not wheels, but the name applies
>
>I forget the nomenclature of the "Command Track" but it was basically a
>double decker M-113 carrier.
>

>
>Being the ranking NCO I was also the track commander. Giving me the
>"pleasure" to ride with my helmeted and usually masked head out of the hatch
>to guide the driver.

Wow, real Tuff Guy stuff. I'll bet you tell some dandy "field
action stories" down at the Legion hall.

>There it is guys, Lennie showing not his ignorance, but his stupidity. He
>sits there in front of his keys and decides everything based on incorrect
>assessments. What a world class dumbass.

Score another "doesn't play well with others" on Dannie Disabled's
record jacket.

>Do you remember the Vietnam War Lennie? The US Army in Europe was at the
>bottom of the list on new goodies. You can figure that out, right? Now
>let me address your ignorance further;

I remember ALL the wars the United States had since 1941. I was alive all that time. After 1960 my military service obligation was over when I received my Honorable Discharge from the United States Army. Good and bad...my employer could now send me on field engineer assignments, unworried that I would be suddenly mobilized.

>USAEUR was assigned blocks of frequencies by the German government. Some
>not in the best spots. A local commo officer then determined which ones to
>use at what time and on what day/night. Normally these comm officers had no
>knowledge of things like "skip", NVIS, or groundwave. Not to mention
>broadcast QRM (Short Wave). So it was a shot in the dark if any frequency
>chosen would actually work for the distance, time, day/night that it was to
>be used.

Tsk, tsk, tsk. You should have reported all that to your Armor unit CO and had that investigated!!! [but, with your ham licenses, you "knew more" than any damn commissioned ossifers did, dint ya?]

>For some reason the comsec officers liked to put us in the 2 Mhz range at
>night, and the 7 as an alternate. 2 would work, but for the way to short
>whips. And no we never bother to deploy the GRA-50s.....you DO know what
>they are don't you?

I can look them up. :-) NOT being IN the Army in the '70s, I didn't know one HAD TO KNOW EVERYTHING and keep it in mind forever! :-)

>The 7mhz was eat up with broadcast QRM, so forget it. And the 2 never got
>out of the woods.

You claim that "all you had" was leftovers for equipment in the 1970s. Tsk, tsk, "leftovers" from the 1960s...BEFORE the U.S. FULL involvement in Vietnam were THERE, even in the USAEUR [military speak for U.S. Army, EURope, for you civilian readers]. You did "NOT" have the "three-band system" on high-HF, low-VHF for overlapping commo bandspace for Armor, Artillery, Infantry? I'm surprised. That went into effect in the mid-1950s and hung around for over a decade, especially in vehicular comms of all units.

>The reality of it was this; Using 100 watts output on RTTY (RATT in Army
>Speak) into a 15' metal whip and sitting in the GAP you were damn lucky to
>make commo with your units, especially at night. Sometimes you got lucky.
>Not like today I am sure.

"Today" is NOT 33 years ago, Dannie Disabled.

>The most reliable commo was usually on the 40 mhz range FM VRC-12 units.
>Range was extended by deploying "radio relay teams" to hilltops to act as a
>manual repeater.

Dannie boy, VHF FM was the STANDARD communications radio type during WW2 in Yurp for vehicles of all kinds and learned well by

the Army so as to continue using it.

>RATT Short Wave Commo was spotty to say the least.

In YOUR unit, apparently. :-)

Was YOUR unit so 'special that you "needed" comms direct with SHAEF Hq? :-)

"Short Wave Commo" was a STANDARD operation 24/7 for the Army (and all other branches) Defense Communications System. The Army part was called "Starcom" before that, and "ACAN" before that. Yes, and I'm familiar with other branches, even the USAF "Aircomnet" and other alphabet soup. The TTY message relay center designators didn't change not even into the 70s, not the ones at Primasens (RUFP), Kaiserslautern (RUFN), Seckenheim (RUFW), Vainingen (RUFO), Bonn (RUFK), or at Frankfurt (RUFY). The DCS went all around the world, established so during WW2 and continuing on until the 80s.

Pirmasens (RUFP) would monthly go through Asmara, Eirtrea (RUQP) to Manila (RUMP) (hi, hi) and then to Tokyo (RUAP). I thought it most interesting to see the TTY test traffic when that was done...had a hometown friend at RUFN but we could NOT use the circuits for personal communications. Must have been lots different in the Army that followed my time, what with shack-onna-belt in a shack-onna-track for fun and games in the field.

>Believe it or not...I was there...you were NOT.

Oooooo! More Tuff Tawk! Tsk, Dannie, I was IN ACAN...but at a big communications station, not sitting in some tracked vehicle playing sojer in da woods. I was NOT IN Bavaria but love their cream pies, am indifferent to cuckcoo clocks but find lots of cuckoos in here. :-)

Did you think Tokyo, Japan, was some kind of rear-area FAR from any live-fire conflict? Jimmie Noserve thinks so. Stebie da wundermurine thinks so. Tsk, tsk, I was >>IN<< big-time HF communications that was running 24/7 comms on Army business, not playing with any shack-onna-belt HTs in any shack-onna-track. HF, Dannie Disabled, we only used VHF and UHF and microwaves for radio relay.

>> Sorry, but use of REPEATER techniques, particularly UN-
>> manned repeaters, was pioneered by the U.S. Army in Italy
>> in late 1943, then used in France and Germany 1944-1945,

>> REPEATERS, those can very easily operate WOTHOUT operators
>> "operating" things (taking any active part in the repeating
>> process of the radios). Repeaters are DESIGNED to operate
>> unattended.
>
>None of which was available to any of the ARMY units I was with in Germany.

As if. :-) Tsk, tsk, tsk...the "three-band Armor-Artillery-
Infantry" radios were being issued in 1954 through 1958. The
grunt versions were the AN/PRC-8, -9, -10s and there were VRCs
and GRCs that fit the same bands. The little PRC-6 was ready
and used during the active Korean War ('50 to '53) but...
SOMEHOW...it "NEVER" got to the USAEUR by 1970?!? Incredible.
You should have notified your congresscritter immediately!
DEMAND and INVESTIGATION!!!

All the "PRCs" I mentioned had peripheral kits designed just FOR
unattended REPEATER operation! Amazing but true! Was in their
TMs and everything. For most of the "VRCs" and "GRCs" the same.
Just put them in place and leave 'em until the batteries run
down or the generator fuel runs out or "man" them as local
commanders say.

>And what you said has NOTHING to do with what I said. AMATEUR RADIO
>REPEATER OF FELDBURG. At least TRY to stay on topic Loser.

Riiiiight, tuff guy, AMATEUR RADIO used to direct Army Armor
units in the field? Suuuuure. :-)

>They were as follows; 23rd Engineer Battalion, Hanau FRG (Federal Republic
>of Germany)
>
>1st Squadron, 11th Armored Cavalery Regiment, Fulda, FRG.
>
>143rd Signal Battalion, Frankfurt, FRG.

FRG you, Dannie. Do we all have to LOOK THOSE UNITS UP in
something, Dannie? If we have to do that, why not give us a
hint of the U.S. Army DIRECTIVES that explain the use of
AMATEUR Radio Repeater procedures for Armor-Artillery-Infantry
units in the field of the 1970s?

>> 1972 was THIRTY THREE years ago. By all appearances you've
>> done considerable "editing" of the ACTUAL FACTS surrounding
>> your field commo adventure. MANUFACTURING the story is more
>> likely.
>
>And it is obvious to anyone that bothers to check what I say that you are
>the liar and not I.

Look in any calendar or gazeteer of astro-navigation data,
1972 WAS THIRTY THREE YEARS AGO!!! No "lie," Danny Disabled. :-)

Let's see...1972 to 1973 is one year...1972 to 1974 is two years, 1972 to 1975 is three years, 1972 to 1976 is four years, 1972 to 1977 is five years, <switch hands>, 1972 to 1978 is six years, 1972 to 1979 is seven years, 1972 to 1980 is eight years, 1972 to 1981 is nine years, 1972 to 1982 is ten years. Well, you get the picture, right? I didn't want to embarrass you by making you count on your toes for a "twenty." You would have to borrow someone else's hands and feet for the 13 more...

# 2008. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-16 03:58:29 UTC
From: LenAnderson@ieee.org
Message-ID: <1124164709.583278.255190@g47g2000cwa.googlegroups.com>
Source record: 116308

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of midnight, EDT, 15 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1595

Indeterminate/duplicates (note 1) 70

Unambiguously Against NPRM (note 2) 431 28.26%
Unambiguously For NPRM (note 3) 879 57.64%
Code test ONLY for Extras (note 4) 215 14.10%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

3. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 15 Aug 05 that would be 1525.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

may bee

well here we are on day 5 of Stevie promised "action"

total results to date, nothing

It sure looks like Stevie promise of action was somekind of lie

Did he even call anyone? maybe

Did any one take him seriously? looks like that is a NO

that Happened? not according to other
OTOH it likely should have, or do you hold UBL's family responible for
UBL's actions

You should remmeber that his family and UBL at one time worked for the
US, against the Soviets in Afganistan

Nothing like presidential consistency. George Bush has racked up at least
1800, and thats only the deaths that occurred inside Iraq. And anyway Bush
was too busy playing golf to heed the warnings arising out of the foiled
plot to bomb LA to abandon his extended leave and tackle the problem prior
to 9/11. But then why would he 9/11 provided him with the perfect pretext to
attack Iraq.

Frank, who said that?

Here's how I see things about newsgroups...It's one thing to go to
a newsgroup about which you have little knowledge or background and say
"I am not a widget fan, but would like to know more about widgets".
Unfortunately THIS newsgroup has attracted more than it's fair share of
non-participants who are here to do nothing but incite discord.

I think that when someone posts in an Amateur Radio newsgroup
about Amateur Radio, it's only natural to kow what that persons
background in it it...Just the same if I was commenting in a Widget
newsgroup.

I'm not a "hammie", nor did I call ANYONE a "nobody", least of all
you.

Semper Fi

Who's "Nick"...?!?!

KY4Z belongs to a guy in Kentucky named James.

Why are you lying?

You are a moron who dosen't know his ass from a hole in the ground.
Clinton had nothing to do with UBL. Rather, George HW Bush was
up to his neck in Saudi Oil Money with Usama Bin Laden thru the 70's
and 80's. Read about it here: http://www.bushwatch.net/bushmoney.htm

> > and meaningful manner.
>
> dpends on how well the morse was send if the operator was good I can
> turn it around in acouple of minutes if it is bad then maybe an hour

"depends" "sent"

It won't matter HOW fast it's sent...If you can't do it, you can't
do it.

> But I could respond in seconds tell them someone was trying to decode
> and tell em things to do in sending there signal that would help my PC
> to copy

How can you send a message in response TO a message and tell them
you're trying to "decode" it when you don't even know why the original
message was sent...?!?!

> > > the word you refuse to say, the answer to the question of when you
> > > worked those out of band hams did you know they were out of band or

> >
> > Why, Mark, is that an "evasion"...?!?!
> >
> > It remains the point. He wasn't required to know.
>
> it was never the point

Sure it was.

Was he required to know the OTHER station's operating limits, and
WAS he, by his Tanzanian license, restricted from communicating with
them.

It's the WHOLE point!

> > > you dance and dance avoiding this question
> >
> > In either case, he's "in the clear".
> >
> > Dave had NO OBLIGATION to know who was in or out of the bands per
> > THIER administration's requiremments.
> >
> > None under US law...None under Tanzanian law...None under
> > International law.
>
> more evasion

It's not "evasion".

It's a matter or complying with laws and regulations.

A question even YOU said was moot!

> > Which means YOU haven't got a leg to stand on.
>
> the longer you 2 dance around missing the point the better it gets

There's no "dancing".

YOU have acknowledged that Dave wasn't required to know the French stations limits.

YOU have acknowledged that no one could be EXPECTED to know other stations limits...

Yet YOU keep trying tio insist that it somehow applies differently in this case...

Which just makes YOU look (as if it were possible) even MORE idiotitc.

no you did it for for me but you quote you

Markie: Enter Profanity of Choice Here And Show Us What Your're Made
Of

there is a Demand of your, You make demands in you titles of post
everyday

that is close enough to all the time for me

> > > Uh huh...riiiiiiiiiiiiiiiiiiiiiiiiight.....

What callsigns are new Amatuer Extra's getting assigned these days in Region 4? Are there any 1x2 or 2x1 callsigns starting with W/N/K left, or is the FCC reverting to AB#CD?

## 2030. Ya Gotta Love Idiots like Stevie

AOF:

Look at your past posts, and those exchanging with you. All you are doing is defending your self against an attack or forced into a counterattack on someone attacking you. You have been effectively side-lined, removed from the real game of constructive comments, ideas and exchanges on amateur policy and future. If that isn't a plan to stop progress, it still effectively functions as such and by past example here, it does seem quite effective.

Argue personalities or argue ideas, facts, regs, rules and future, the choice is yours. Arguing personalities is ridiculous, and unproductive.

A course one has been following does not need to be continued nor followed to a failed end. Change tactics and you change the outcome.

John

Lie

I already have just not by a methodlogy that I am allowed to use for e
a Code test

I have logged long ragcrews in Cw I was doing it to help other hams
pass there tests and so rather than typing at each other In Mirc or

other means we chatted over the air me all PC for encoding and decoding
him by ear and keyer toreply.

And anyone that can follow my typing converted to Morse can pass a test
at the same speed

>
> > > > You refuse to acept facts

if I here SOS or anything like it ....DUH

Now agreed I am not as likely to hear the signal, indeed even if you or
Dave were at my rig it would harder to read the CW signal since I don't

bother with specail Filters for CW etc. I would be looking through the
band in SSB sized slices et, so I am more likely to miss it, but IF I
hear it I will respond

>

> do it.

Liar if the morse is badly sent it matters, if the speed ins't even it
matters. I can do it Me and MY pc that is, The mere fact i got a
somewhat defective modem unit in my brain for such things doesn't mean
I can't be fitted with an external modem that will work

I know my limits, and I prepare for them. I considered long and hard
the Claim of the Procoders about distress, and did something about it.
I aquired the tools to deal with the issue, maybe I (and my Pc) are not
as Good as you or Dave, maybe we are, but we are better than Many
stations that passed the Code test and forgot code the next day,
meaning I am good enough for the current bands

The Last a point that the ITU and the FCC agree is correct
>
> > But I could respond in seconds tell them someone was trying to decode

I can send a message quote "to station apearing to sending SOS on this
Frequency DE KB9RQZ please repeat now nature of you emergency, please
be adivised that Sending slowy and evenly is required for this station
to receive decode and attempt to assit you over"

Indeed since the program I have has memories for sending caned messages
that one I can send by hitting key <f1>

>

no just shows you and dave are not answering the question put

If Dave knew (by what ever means) they were out of band when he made
the contacts then he was wrong to do it

If dave only learned later they were out of band then he gets a ONE
time pass.

So until/unless Dave wants to answer questions about what did he know,
and when did he know it all of this is evasion
>

The last sequentially issued Group A callsign (as of 12:23 CDT 16
Aug, when I post this...) was AI4LN, and that was on 01 August.

> Are there any 1x2 or 2x1 callsigns starting with W/N/K left, or is the
> FCC reverting to AB#CD?

They haven't recycled any callsigns for sequential use since 1978
when the sequential program began. They do, of course, re-issue calls
when they are available, for Vanity issue.

Not realy I am partciating in threads with Dee about the future

The thread with Dave and DX while rather acrimonious is on target as
the ARS, being over what Is and isn't Good Ham practice

The thread could be better of course but.. i can only work with what I
am given

Part of the thread with Dave deals with wether or not Morse Code
knowledge is in fact required to use Morse Code for an effective
purpose

T spend more time on Better threads.... I need better threads to coment
on, The quaility lately is pretty poor

So not realy sidelined

>
> Argue personalities or argue ideas, facts, regs, rules and future, the

But Pusing back at Stevie Bluffing has resulted in fewer posts from
him, and less of the realy bad rethoric from him

He has Stopped relently attcking some others, Poster that I find to be
more efective than myself tand that I by and large agree with

Given my typing problems if I aid other that I agree with in expresing
themsleves that is fine by me

>
> A course one has been following does not need to be continued nor followed

I have changed Tactics and the outcome is improved, alas the results
could be better, but in time hopefullY I will find yet better tactics

But yeilding to the threats of petty bully is never a good idea

No prefect Solution yet But I keep trying

> >
> > That makes you a voluntary idiot.
>
> no it makes me at worst stuborn

No.

It makes you a voluntary idiot.

> You want me to spend time and energy on what you want?

Nope. I want to be able to read your thoughts without having to
interpret individual words.

> You are a fool if you think you can bully me into doing your will

Not bullying, but you've already DONE it, Markie!

As I stated in another thread...

> > > > > It isn't hard to reconize SoS

"capacity" "denied" "insist"

You claim an IQ of 248 and more-than-adequate financial and
material resources, but can't seem to fix simple problems without being
taken by the hand and guided step-by-step.

> > > > > Once reconized the action needed is clear, For me of course the

"special"

No, Markie...If you're listening in "SSB sized slices", you are
MORE likely to hear a CW distress signal.

> > > I have done so many times
> > >
> > > I bet you have.
>
> thank you

That wasan't a gratuity, Markie.

> > > Indeed a FD station where I was doing so may even be in Your log

> >
> > Liar

Nope. I could send it at 3 WPM and you'd still screw it up.

> if the morse is badly sent it matters, if the speed ins't even it
> matters. I can do it Me and MY pc that is, The mere fact i got a
> somewhat defective modem unit in my brain for such things doesn't mean
> I can't be fitted with an external modem that will work

Oh?

We keep trying to get you to use an "external modem" in the form
of a spell checker and you cna't seem to master that. What's to make us
believe you'd be any more functional using a PC for Morse Code
purposes?

> I know my limits...(SNIP)

Obviously not.

> (UNSNIP)...and I prepare for them.

Again, obviously not.

> (UNSNIP)...I considered long and hard
> the Claim of the Procoders about distress, and did something about it.

> Frequency DE KB9RQZ please repeat now nature of you emergency, please
> be adivised that Sending slowy and evenly is required for this station
> to receive decode and attempt to assit you over"

In which case you would have violated on of the principle
guidelines for aiding stations in distress....DO NOT TRANSMIT unless
you are immdeiately able to assist.

> Indeed since the program I have has memories for sending caned messages
> that one I can send by hitting key <f1>

"canned"

Unless, of course, you meant you strike the mesaages with a stick
before you send them...?!?!

> > > > > the word you refuse to say, the answer to the question of when you

> The point was DID he know not wether he was required to

If he was NOT required to know there was STILL no violation since
his licensing authority didn't deem it important enough to address in
the first place THEY didn't deem it a violation!

> > > > > you dance and dance avoiding this question
> > > > >

It wasn't illegal, knucklehead! That's the WHOLE point! There
was NO standing regulation that addressed it in the first place!

> > > > > Which means YOU haven't got a leg to stand on.

Not a braggard, not a bully and there's nothing "alleged" about
having been in the Marines.

> or are you Now Dening being a marine?

Funny...You capitalize "dening" (denying) but diminutive Marine.

> coming clean about that are you?

Coming "clean" about what?

> > > and you qualify more than qualify
> > >
> > And you still can't put even a simple sentence together correctly.
> >

AOF:

Defending the truth is noble, but obvious.

Possibly many have not seen a code reader/sender utilizing a computer. I
think it becomes apparent that two stations using code readers/senders at
rates 60-70-80+ wpm are out of the league of those copying by ear...
sending morse from a pre-existing text file, speeds of hundreds of wpm are
easily accomplished...

Only those who have never been exposed to such equipment will argue
counter...

No It is not what you said

You said I could not responf to Morse Code distres Signal

I can

>
> > But I never have my radios without having at least one of my pc's, So I

I can do and Have done it

Face facts

Manual Morse Code just isn't that specail for modern PCs

>

> > meaning I am good enough for the current bands
>
> Are you?

sure are

More fit than any of the Code users that boast of lacking a Mike
altogether

>
> > The Last a point that the ITU and the FCC agree is correct
>
> I wish I knew what that was supposed to mean.

Then of course you are stupid

It means that the ITU and FCC agree there is no need for manual code
testing or manaul code use, while both reamin premitted

>
> > > > But I could respond in seconds tell them someone was trying to decode

nothing imporper about the message

I am prepared at once to assisit

>
> > Indeed since the program I have has memories for sending caned messages

wrong simply wrong
If he knew they were out of band he was wrong
that he was not required to know does not that fact

>
> > > > > > you dance and dance avoiding this question

sure are

More fit than any of the Code users that boast of lacking a Mike
altogether

>
> > The Last a point that the ITU and the FCC agree is correct
>
> I wish I knew what that was supposed to mean.

Then of course you are stupid

It means that the ITU and FCC agree there is no need for manual code
testing or manaul code use, while both reamin premitted

>

nothing imporper about the message

I am prepared at once to assisit

wrong simply wrong
If he knew they were out of band he was wrong
that he was not required to know does not that fact

>
> > > > > > you dance and dance avoiding this question

>
> Nope.

sure thing

>
> Here's YOUR words quoted VERBATIM.

yep and nothing in there about expectations

not a word

why do you lie so badly?

yes a Braggard and a bully and it is alleged about being a marine, you
have not proven it ever

not that you can prove it here ever

>
> > or are you Now Dening being a marine?

Sure I can.

I've provided more than one credible third party that can
corroborate my previous duty status.

As for "bragard and bully", you're tilting at windmills, Markie!

> > > or are you Now Dening being a marine?

I certainly respect Bill. I argue with him sometimes, but We've always
kept it civil - tho' I don't think he likes my "predictions" very much! 8^)

I even respect Carl, even if he cahnged his mind about some pretty
important things. I would offer some advice to him tho': Never say never...

But WAIT! Just a handful of lines up you said YOU CAN'T...! ! !

> Manual Morse Code just isn't that specail for modern PCs

It takes up a lot less memory than a spellchecker. Old TRS-80's
could do it with the software held on cassete tapes!

> > > I have logged long ragcrews in Cw I was doing it to help other hams

> > interpret individual words.
>
> I don't want you reading my thoughts at all.

Then why bomb the NG with ANY of it, Markie..?!?!

> But I want you to work to read my stuff.

Then we've proven who the bully is here, Markie!

Thanks!

> To make you think, if that is possible for you

Sure it is..

As a matter of fact I have pushed you to improve your spelling.

It's worked.

> You want it given to you

Nope. I want it in the same English that everyone else uses here.

> Go for it yourself you lazy bum

Not lazy.

> You want my words then work for it, don't ask for it to be Given to you

You don't want to be called an idiot, a fool, or illiterate.

Yet you do those things that substantiate my claims.

Willing or not, I've pushed you to improve yourself. But you have
a long way to go.

> > > You are a fool if you think you can bully me into doing your will
> >
> > Not bullying, but you've already DONE it, Markie!
>
> Nope

Yep!

> > As I stated in another thread...
>
> as you lied in another thread

No, I haven't.

But anyone who's been following any of this can attest to the
improvement in your spelling over the last several weeks.

> > You claim an IQ of 248 and more-than-adequate financial and
> > material resources, but can't seem to fix simple problems without being
> > taken by the hand and guided step-by-step.
>
> you claim to undersatnd emdcine without knowing that Leraning Disorders
> are not simple problems

"understand" "medicine" "learning"

I know they're not. But they are also fixable.

That I've pushed you into doing it here already is proof of it.

That you deny it in the face of several weeks of evidence to the
contrary proves me right.

> Intellegnce and Dyslexia are not incompatble. If you were educated you
> would know that

"Intelligence"

I am educated. "Informed", too.

Neither lead me to believe you're as intelligent as you claim.

> > > > How do you know to record one signal over another that MIGHT be a
> > > > distress signal?

> > MORE likely to hear a CW distress signal.
>
> Really if you say so, that isn't what ohers are saying but..

"others"

Yes, I say so. Your likelyhood of initially hearing a distress
signal using a modern Amateur transceiver is far greater if you're
listening without filters.

Put your hands up to your eyes with the lateral aspect of the palm
by the outer orbits and the medial aspects at 180d to the canthus of
the eyes. You have almost complete field of vision.

Now rotate your hands to 90d from the axis of the canthus of the
eyes. Your field of vision is now markedly reduced.

The same happens with the use of filters in an SSB/CW radio.

> > > > > I have done so many times

> More lies on Stevies part.

Nope. Evidence on Markie's part proves...

> With the ARS luddite mentality on Morse Code, it takes a lot to
> assemble and esp test a station using Computer Morse.

It doesn't take 5 minutes.

Plug the speaker into the sound card, turn the computer on and
load the software.

In any case it takes more time than it takes me to just copy the
signal and call the Coast Gurad or AFRCC.

> and Should that Unlikely occasion arise I will do what I can

Which will be too little too late.

> > > > It won't matter HOW fast it's sent...If you can't do it, you can't

If you managed to save a life, you would please a lot of people.

And if a bully shows up here, I am sure s/he'd be pleased too.

> > > I know my limits...(SNIP)

No...I just can't figure out what that sentence was supposed to
say!

> It means that the ITU and FCC agree there is no need for manual code
> testing or manaul code use, while both reamin premitted

"permitted"

So far the FCC hasn't made that official.

> > > > > But I could respond in seconds tell them someone was trying to decode

Sure it is.

You have encumbered the distressed operator with having to
accomodate YOUR inadequcies when he COULD be talking to someone who
could help him.

> I am prepared at once to assisit

"assist"

Not unless the message was by voice.

> > > Indeed since the program I have has memories for sending caned messages

> to say something is "canned" meaning prepared is a clearly understood
> by any one using thier brain

But that's NOT what I was addressing.

I WAS addressing your improper use of the word "caned". To be
"caned" is to be punished by being struck across the back or buttocks
with a cane.

> > > > > > > the word you refuse to say, the answer to the question of when you

> >
> > indeed there is but it is matter of Law, you may not knowingly aid
> > another in the comission of a crime

WHAT CRIME?

No "crime" was perpetrated.

Dave had NO requirement to know if the French operators were "in
band" or not.

Even if they WERE "out of band", the point STILL remains that Dave
was NOT out of band.

There is NO international regulation that establishes even a HINT
of culpability for communication with stations that MAY be operating
beyond the scope of thier license!

Not a one!

> > > > > > Which means YOU haven't got a leg to stand on.

Still no evasion.

What we DO have is Mark C Morgan caught in his own whirlpool of
silliness.

The Commanding Officer at that time didn't have a problem with it. In fact he enjoyed watching me break out the leg key and work some ham stations all around the world. This during the times when we had NO HF COMMO, which as I stated before was quite regular. I used the GRC-106A setup in the Command Track. He liked it so much he eventually got his own license.

I think you are in need of the "trank" Lennie, I have NEVER said, or thought, that Ham radio is "super-secret" stuff. I have no idea where that comes from.

The Battalion Commander had nothing to do with my trip up the mountain. I
went with a bunch of German and American Hams. Of course our ID's were
checked. And NONE of us were allowed access to the actual microwave site.
But that was not our plan. We had in mind to operate on VHF from there.
Which we did with great success.

>

We were field units Lennie. We didn't have air conditioned vans and sit in
parking lots in Heilderburg. All we had available was HF SSB/AM/CW/RATT,
VHF FM Low Band.

>>The reality of it was this; Using 100 watts output on RTTY (RATT in Army
>>Speak) into a 15' metal whip and sitting in the GAP you were damn lucky to

>
> "Today" is NOT 33 years ago, Dannie Disabled.
>

No kidding, again you can't seem to follow along Lennie. We are talking
about the ARMY in the 70s and your total ignorance of commo systems in use
and everything about Ham Radio. Next.

>>The most reliable commo was usually on the 40 mhz range FM VRC-12 units.
>>Range was extended by deploying "radio relay teams" to hilltops to act as
>>a
>>manual repeater.
>
> Dannie boy, VHF FM was the STANDARD communications radio type

In other words you don't know a damn thing about what I am talking about.
Why don't you just shut up and stick with what you know and quite trying to
act like some know it all Lennie? Your not impressing a dang soul. Least
of all not me. I could care less about Tokyo, etc. WE are TALKING about
GERMANY in the 70s.

> Did you think Tokyo, Japan, was some kind of rear-area FAR
> from any live-fire conflict? Jimmie Noserve thinks so.

<plonk>

I would like to apologize to all those, except Lennie, reading this tripe.
I am obviously dealing with someone (Len Anderson) that is not quite right
in the head, and possible mentally ill. His ability to reason is suspect
also.

I see no reason in continuing this debate with someone that is so incumbered
by his lack of knowledge and common sense.

Other words? I haven't written any other words. Look up the page. I
asked you a direct question: "What lie has been told by me"? You still
haven't answered. To quote you: "In other words you refuse to answer".

> meaning you are mostly likely guilty

I'll use your own logic here. Your refusal to answer my direct question
means you are most likely guilty of something.

> BTW you have more than 2000 posts in google, inclduing some sexualy
> sugeestive flirting with a married women not you wife it seems, just
> which of your many post are you reffering

That'd be most interesting, Mark. Who flirts in a newsgroup? Can you provide a link to my "sugeestive" flirting with "a married women"? Would that be one married woman, a group of married women or a married woman with multiple personalities?

> I went looking can find you answering the question
>
> You could have cleared this up with the Word Yes or NO but you refuse
>
> Indeed you choose to type far more words than required evading the

Sure there is.

It started off with "I am a Colonel" and has recently manifested
itself in your claims of owning businesses and turning down $248K/yr
jobs.

> you simply can't keep from embelling a statement

"embellishing"

That wasn't me...that was you.

And I provided a verbatim quote of yours that proved it.

Care for some salt and pepper with that crow?

>
> It's not what >>I<< prefer...

Stevie you can't even accept agreement with any manners

>
> It's about you misepresenting the truth again.

Not at all

It simply about your trying to slice and dice words

I say when I make my PC do something that I have doin git I am setting
things in motion

It is simply a defferent point of view

You are completely intolerant to any point of view but your own

>
> > > > And anyone that can follow my typing converted to Morse can pass a test

>
> No, it's not.

sure is

>
> YOU can't pass a Morse Code exam at ANY speed...You said that in
> THIS VERY POST!

which has nothing to do with my statement

You are lyig in saying it does

>
> > Indeed I could also pass Morse Code test at any speed with my trusty pc
> > at my side
>
> No...YOU could not pass a Morse Code test.

Yes I could with my trusty Pc at my side
>

Not bombingnaything or anybody

>
> > But I want you to work to read my stuff.
>
> Then we've proven who the bully is here, Markie!

Not at all

You are free to ignore everything I write, Indeed I would prefer that

>
> Thanks!
>
> > To make you think, if that is possible for you
>
> Sure it is..

then free to start thinking anytime

>
> As a matter of fact I have pushed you to improve your spelling.
>
> It's worked.

nope

the Weather here has changed and I no longer need to take certain
allergy meds that is all

>
> > You want it given to you
>
> Nope. I want it in the same English that everyone else uses here.

too bad you don't get it

>
> > Go for it yourself you lazy bum
>
> Not lazy.

sure are you admited being lazy

to lazy to work out what I mean

>
> > You want my words then work for it, don't ask for it to be Given to you
>
> You don't want to be called an idiot, a fool, or illiterate.

Not esp but I can take it

>
> Yet you do those things that substantiate my claims.

not realy,

and again you choose to make them again and again and agian

You decsion not mine

>
> Willing or not, I've pushed you to improve yourself. But you have
> a long way to go.

Nope

just passed the allergy season

>
> > > > You are a fool if you think you can bully me into doing your will

> Nope. Evidence on Markie's part proves...

proves?

You claim to know how hard I have worked on morse

You have never even MET me.

You arrogant ass, you don't know enough to judge me

You also don't seem to know the meaning of the word proof

>
> > With the ARS luddite mentality on Morse Code, it takes a lot to

> signal and call the Coast Gurad or AFRCC.

No the PC is already on migth tke me an extra 10 to 20 seconds to get
it ready to call the CG

a few seconds or even a minute or 2 will not matter

>
> > and Should that Unlikely occasion arise I will do what I can
> >
> Which will be too little too late.

maybe it will, maybe not, but should it happen I will do my best, which
is all anyone can do

>

> >
> > Well You know I will put out effort to save a life, I will not to
> > please a bully
>
> If you managed to save a life, you would please a lot of people.

Indeed I would which is why I have spent some time and effort on
preparing for such an unlikely chance

It was interesting in and of itself working with a freind using a
straight key and his ears with me and my PC I found the practice tuing
and dealing with such a signal quite satifing

Now there were interesting problems along the way so If I had not
practiced ahead of tim I would indeed have real trouble just steping up
and doing it

>

what?

>
> You have encumbered the distressed operator with having to
> accomodate YOUR inadequcies when he COULD be talking to someone who
> could help him.

no I have not,

Since it would take me a few second to fire up the program I would know
if someone else were on the air most likely (but not for certain of
course)

Nothing improper about asking him for his position etc. after all If
you came in just on part of his message he would have to repeat himself
for you

and you would have stand by and not assist him
>
> > I am prepared at once to assisit
>
> "assist"
>

>
> In other words you refuse to answer

No.

Meaning that he's not going to "haul your freight" for you,
Markie.

> meaning you are mostly likely guilty

Guilty of what?

Neither you or Brainless have substantiated so much as a parking
ticket let alone violations of ANY radio law, foreign, domestic or
international.

> BTW you have more than 2000 posts in google, inclduing some sexualy
> sugeestive flirting with a married women not you wife it seems, just
> which of your many post are you reffering

Yeeeeeeeeeeha!

OK, Markie! SHOW EVEN ONE SUGGESTIVE FLIRTING POST ATTRIBUTABLE
TO DAVE HEIL!

> I went looking can find you answering the question

Then do it LiarBoy!

> You could have cleared this up with the Word Yes or NO but you refuse

There's LOT'S of things YOU could have cleared but haven't.

> Indeed you choose to type far more words than required evading the

> > >

> > There aren't any important points, Mark.
>
> just the one you refuse to answer

He hasn't refused to answer anything.

YOU, on the otherhand, have refused to accept the truth even
though you have acknowledged that Dave had no obligation under any law
to know the operqating limits of foreign stations.

> > >>>I do undersatnd slapped silly it just doesn't apply

# 2061. Re: Ya Gotta Love Everyone

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-16 21:57:30 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <pan.2005.08.16.21.57.28.36603@gmail.com>
Source record: 116412

AOF:

True. Discussion of religion would best be left to another usenet thread
with christian, religion, etc in its name. Maybe
rec.radio.amateur.religious.views ???

Allowing one to be side-tracked onto religious subjects not relating to
amateur policy would be another BIG mistake...

"Many countries" should have invaded. As it was, the Russians got in
the game late by taking an airfield out from under our noses. Gen
Clark wanted to start WWIII over it.

The
> one with the vital interest (oil) had a couple of countries (of meaning)

The USA will know who to support in the future.

This is a problem that needs to be addressed. Those that come in with this type of attitude and expectation are at great risk of creating a self-fulfilling prophecy.

> I am marginaly involved in the local club the only tech class they see

>

Your club has a problem in that case. However we do not have that problem in the club to which I belong. It is approximately half Technicians. Two of our club officers are Technicians. Our club satellite guru was a Technician until quite recently as was our club VHF guru. They all have enthusiasm for the club and ham radio and there is mutual respect. The mutual respect is the key to it.

Find a different club. Our club has two "missions" if you will. One is supporting public service events and the other is running amateur radio classes. We are already scheduling classes for the people who will want to ugrade to General under the new system. We figure by the time we get the word around about the changing requirements and the class, arrange a location, have the class set up, and actually go through the class, it should dovetail fairly well with the arrival of the new licensing requirements. The class is likely to start in January.

I believe that David had no knowledge of the shenanigans that he was participating in at the time.

However, he has indicated that it would have made absolutely no difference to him. He would do so again with full knowledge that the other operators were out of band.

He's free to change his story or "set the record straight" at any time.

Don't get too carried away. While I admired the fact that they acted instead
of talked, I abhored the NCI tactics. As far as I am concerned, they put
down the no coders worse than any pro-code advocate ever did by pushing the
idea that it was too hard for average people to learn. They also touted how
much less power modes like PSK took but omitted including the power
requirements for the necessary computer and monitor, which more than wipes
out any power consumption advantage.

IMO Yes Iraq should break into 2 if not three states

I know why the US opposes it since of those states the Kurdish nroth
would likely redouble thier efforts to bring their fellows kruds in

turkey and Iran in the thier new state and that is a Can of worms that
the US is afraid to allow opened

|
| The last sequentially issued Group A callsign (as of 12:23 CDT 16
| Aug, when I post this...) was AI4LN, and that was on 01 August.

Looks like they are getting near the end of AA4AA-AL4ZZ. Will they go
with KA4AA-KZ4ZZ and NA4AA-NZ4ZZ and WA4AA-WZ4ZZ next?

|> Are there any 1x2 or 2x1 callsigns starting with W/N/K left, or is the
|> FCC reverting to AB#CD?
|
| They haven't recycled any callsigns for sequential use since 1978
| when the sequential program began. They do, of course, re-issue calls
| when they are available, for Vanity issue.

IOW, don't put much hope, especially in 4, of getting a cool call from
the sequential draw, when you upgrade. Just keep your old call and try
to see what you can get through the vanity program. Or just keep your
old call so everyone knows you.

It isn't a lie, Mark. I've told you. Others have told you. I'm going
to suggest to you the same thing I've often suggested to Brian Burke.
Take it up with the French PTT. They control the acts of French radio
amateurs who break their rules. They'll, of course, want to know which
French hams and on what dates and at what times and on which
frequencies. You'll be able to provide them almost nothing. They'll
figure that you're a goofball. They'll be right.

Again? You haven't been able to establish *one* lie, much less prove another.

> you look guilty by avoidng the question put to you in your "response"

You look guilty in your claims of military rank and draftee status when you would have entered the military after the end of the draft. That certainly makes your questioning of Steve's military service look as goofy as Windy Anderson's knowing what W4NTI did and didn't do in the military. You must be *guilty* of something.

>>>nope you are not very interting your post in the personals were more

Dee suggested, "Find a different club."

To which John thought, "How would I be of any use, if all I did was hang with those who agreed with me?"

The junior college here will offer a summer course which will count .5 unit towards an AA degree (in an appropriate field), as part of the final they will be given a general test, final grade will depend on passing that test. Hopefully, we will turn out tens of new generals per year... class has cleared most hurdles, fine points still open to being worked out, and will be instituted summer following the discontinuance of CW testing.

Let's prove those saying dropping CW will make no difference BIG liars!

Agreed he supports and Promotes poor Ham practice, which is just abit
defferent than I was believeing

... since the boundaries of Iraq were created by the british taking a map
and deciding how they would like the area divide... maybe, the Iraq gov't
(once established, stabilized and functioning) should raise that question
and decide themselves ...

# 2084. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-16 23:09:38 UTC
From: N2EY@AOL.COM
Message-ID: <1124233778.445764.248160@g44g2000cwa.googlegroups.com>
Source record: 116432

These are the numbers of current, unexpired
amateur radio licenses held by individuals
on the stated dates, and the percentage of
the total number of active licenses that
class contains:

As of May 14, 2000:

Novice - 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of August 15, 2005:

Novice - 27,910 (4.2%) [decrease of 21,419]
Technician - 270,309 (40.7%) [increase of 64,915)
Technician Plus - 47,392 (7.1%) [decrease of 81,648]
General - 136,083 (20.5%) [increase of 23,406]
Advanced - 75,435 (11.4%) [decrease of 24,347]
Extra - 106,964 (16.1%) [increase of 28,214]

Total Tech/TechPlus - 317,701 (47.8%) [decrease of 16,553]

Total all classes - 664,093 (decrease of 10,699)

Note that these totals do not include licenses
that have expired but are in the grace period.

They also do not include club, military, RACES
or other station-only licenses.

Note also that effective April 15, 2000, new
Novice, Technician Plus and Advanced licenses
are no longer issued.

Since April 15, 2000, FCC has renewed all existing
Technician Plus licenses as Technician. It is therefore
informative to consider the totals of the two classes,
since the Technician class includes a significant
number of Technician Plus licenses renewed as
Technician.

Maybe, maybe not. But he sure as hell won't expand on his original
slip-up.

No siree.

I'm just interested in clearing his good name. Hi!

And he's got a box full of medals. But they're his "collection," not
actually awarded to him.

I saw in a previous post where you mentioned "Pomeroy." There is a
Pomeroy in Ohio, the only one that I've ever encountered. And I happen
to have a field person with the last name of "Gilliland," the only one
of those I've ever encountered. Fair enough, Washington. Near Whidby?

A person posting with th[i]er name is anonymous?

Is that anything like being a jerk for >>>not<<< giving someone grief?

You can QRZed "Gilliland" and find Frank on there. But you'll have to
do the "leg" work yourself.

Indeed we techs have been taking care of our own quite awhile now

Not as other might like prehaps but I was taught my starting stuff by a Tech plus (now extra class friend) and I have my feldglings as well, some of whom since they had the talent for manual Morse 5 in fact some in the Fm repater zone some into other things too

these days been working with guy localy he is a bit slow (not stupid or anything just takes quite awhile to muddle through) and therefore been brushed aside by many trys my pataince at times. We met atthe club meeting after the NPRM day both having shown up to show off a shiny new radio, exactly the Same Model shiny new radio, the Icom 910 H with 23 cm module, he was having touble installing it I helped showing off the insides and such we chatt most days indeed thanks to him I remeber to turn my radio on more, but I also hear hecklers when he come the repteater to get my attenion they don't give their calls, but they are not nice. We then change freqs up to 1.2 gig simplex

I have encouaged several new licensees myself and most of thm have found niches in Ham radio to suit them a couple are even realy into CW as an interesting karmic turn

I heard this on the local NPR radio station this morning. They made BPL sound rosy. They did mention that the ham radio guys were against it but came up with some "notching" solution that would take care of ham radio guys concerns.

You can listen to the stream at:
http://www.npr.org/templates/story/story.php?storyId=4801446

If would be great if a qualified ham could respond to their article. They usually take listener comment and broadcast those comments the next day or so.

Len, we could apply the null hypothesis. It could have been a disgruntled NCTA trying to make the PCTA look bad. But there's two problems with that hypothesis:

a. The NCTA have nothing to be disgruntled about except a quarter century of arbitrary and unnecessary government regulation, and

b. The PCTA make themselves look bad without any help.

Hi, hi!

There's no problem with Hans calling others "DumpHuck."

I recall Hillary desiring a free Palistinian State and the violence
escalating (and Al Greenspan wanting to put the brakes on the economy).

I don't see her desiring a Free Shiite State, a Free Kurdish State, or
a Free Insurgent State.

Source record: 116507

. Grab a cheapo CB rig from a used store for $5-20 and get on the air directly to spread the word (don't be tempted to use illegal 10 meter equipment on 11 meters!)

.Run out flyers on your printer and hang them onboard college campuses, laundrymats, truck stops, libraries, gyms, ask quick stop stores to post them, email non-amateur friends, etc.

.Point out the URL's to fcc pages for them to comment on these issues.

.Tell co-workers, post a flyer at work, offer to assisted them with study material.

.Think up ways you think will be effective and share them with others.

.etc...

There are no 1x2 or 2x1 available for sequential issue in any of the
continental call sign sections. There are likely some available through the
vanity call sign system however. If you ask for a new sequential Extra
call, you will get a 2x2 beginning with A.

But why be so stubborn about using a spell checker? Is your ego more
important than your message? In every communications class that I have ever
been involved in, the instructors taught that it is the message that is
important. It is the responsibility of the person wanting to communicate
that message to be sure it is sent in a manner that the audience can
understand. If your audience tunes out because of the extra effort to read
or listen to it because of avoidable problems, it is your fault not theirs.

I didn't realize any call area was that far into the A's. They've only got the rest of the AI's, the AJ's, AK's, and AL's to go. It's a good thing a lot of people who upgraded kept their old calls or they would already be out. Would you happen to know how fast their going through the sequential issue?

I believe so. It has been the pattern that when they run out of the highest block that the license class is eligible for that they just drop down into the next category. Extras would certainly be eligible for 2x2s beginning with W, K, or N. The W 2x2 block is gone for sequential issue but I think there are some still left in the K 2x2 block. I would imagine that they will pick up at whatever point they are in that sequence. Of course there are Ws and Ks available in the vanity program and I know some Extras who opted for those as vanity calls they didn't like the A's or simply because a "cool" call was available that they liked.

One becuase it is made as a demand

Two, becuase in sending a message to someone that does not want to recieve it it takes special action. Have you not heard that the man that will not listen to the shout may strain to hear the wisper. Other are efectively shoutin gth message, in making Stevie and other strain for it you also make em think about it, It is simply one more tool in the aresenal

Three, It take alot of time and effort

Four in going and On about the message they help to reach the real audience which is the lurker gruop out there

In the NoCode movements various people are taking various parts My message gets out there well enough to suit me, but every voice need not reach all the listeners

Five producing prefectly correct spelling (I went to trouble for awhile some years back) will not stop the flaming from Stevie and Dave, and I prefer the flavour of these flames to the others I have seen

BTW I am totaly convinced that Stevie understand better than 95%, his complaints of Giberish are too well placed against the center of my arguements to beleive otherwise, that with the fact that the degree to which folks seem to have problems with my depends directly on the degree to which they oppose my ideas also leads me to conclusion I am comunicating quite well indeed

Any questions? You are being polite so I will try and answer you

AOF:

The people who are asking you about a spell checker probably got their
software (windows) with the computer. Or, they have purchased expensive
microsoft office, works, etc and it gave them the ability to incorporate
their spell checker directly into outlook express.

You, apparently, do not have that ability or have purchased the expensive
software just to gain spell check.

Am I close to correct?

John

Well I believe it was Alun who, for 15 years, "proved" he couldn't learn code. Then he found the right teachers. Part of the problem is that many people do NOT really know how to teach the code even though they may be proficient at using it.

Statistics over the next 5 to 10 years will tell the story one way or
another.

Actually it is most likely that they do include some expired hams. Unless a family member has thought to send the FCC proper notice that the ham has died, he will be carried on the current license list until his license expires due to non-renewal.

This, "You, apparently, do not have that ability or have purchased the expensive software just to gain spell check."

should have been, "You, apparently, do not have that ability or have [NOT] purchased the expensive software just to gain spell check."

... but then, you most likely guess that, and demonstrated a clear ability to read through typos ...

Well it is your choice but frankly I skip any message that takes extra effort to decipher. I keep my spell checker and grammar checker turned on at all times despite the fact that I received straight A's throughout elementary school, high school, and college in all the English classes (and related classes) that I took. Even with these aids turned on, I take time to look through my message and make sure that it is as clear as possible. I want people to read what I've written. Otherwise why bother to write anything?

Dee:

Yes, let us hope the future gets brighter... and if it doesn't, we take it upon ourselves to enact further changes so it may.

There are many, frequent and accelerated changes which lie ahead which amateur radio already has a late start on--it is already a game of catch-up...

Pretty close

My ISP does not provide a Usenet server and the software that could
spell check a usenet post (in my poscession) would require me to spend
money to aquire access to such a server. Google which I am using is
free but does not provide such a spell checker so you are very close
indeed

That's what I did. An extra with a "novice" callsign I've heard people say.... Got it in 1976, and I think that it was a recycled call. Someone in upstate NY had it before I got it.

You are of course free to do so

I want people to process what I write not merely read it, and judging
by Stevies behvoir I do a pretty good, which is likely why he goes into
such a frenzy since I am getting through to him, and others like him

AOF:

I will share something important with you, a secret I am rather ashamed of. In latter elementary school and most of high school, because of my height and speed, I was rather a bully.

I fear I made some other kids lives a "bit of hell" rather than just taking my insignificant (and rightly so) place in the scheme of things and attempting to make my teachers and parents proud of my caliber, I let them down--worse, and even worse--myself.

The good news is I learned better... I took what steps I could to apologize and set things right, after I had gained the common sense to see it for the insanity it was...

The bad news, I still think about it and feel sad... I suppose it will be like that to my grave, perhaps a lot longer...

If the lesson I learned is of value to anyone else, I summarize it here, "When you strike another person, the blow really lands upon you. You just don't see that it does you the damage, others do..."

I still would not back down from a fight, but the other clearly has to ask for it.

John

> that is you flinting with a striper

I'm ashamed of all the time I wasted flinting with a striper. *Guffaw*

Mark, isn't a big, steaming plate of crow waiting for you? Is there anything you'd like to clarify? Anything you'd like to mention? Are there any errors of fact for which you feel it is necessary to own up?

Why, if you'd make *these* errors, your understanding of my operating habits while in Tanzania could also be in error, couldn't they?

Is there anything at all you'd like to say in reference to your major error on this matter?

Dave K8MN

# 2133. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-17 04:31:07 UTC
From: LenAnderson@ieee.org
Message-ID: <1124253067.133797.320040@z14g2000cwz.googlegroups.com>
Source record: 116534

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of 8:00 PM, EDT, 16 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1598

Indeterminate/duplicates (note 1) 70

Unambiguously Against NPRM (note 2) 432 28.27%
Unambiguously For NPRM (note 3) 880 57.59%
Code test ONLY for Extras (note 4) 216 14.14%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 15 Aug 05 that would be 1528.

As of 8:00 PM EDT on 16 August 2005, there were no entries
into the ECFS indicated as received on the 16th of August.
Three additional documents were entered for 15 Aug 05 by
the FCC.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

but not

Well, anyone IN the military has to obey their superior
officers or face disciplinary action...at worst being in a
courts martial under the UCMJ (Uniform Code of Military
Justice...applies to ALL branches).

If your CO said it was okay, then you had to accept that. There
is NOTHING specific in the UCMJ or ARs or SRs (Army Regulations,
Special Regulations) that covers "amateur radio ops" while on
duty in an armor unit field exercise. However, there's a heap
of very pertinent ARs and SRs, plus directives, plus COMSEC
specific directives (COMSEC = COMmunications SECurity, a generic
term that came in later than 1972 but existed under other names
before then) that say one has to do Army business on Army time
and communications ABOUT Army business over unsecure civilian,

especially foreign, communications facilities can be taken as
a violation (see Treasonous acts under UCMJ) of national security.

But, something ELSE operative here. Note: Your CO gave you
permission to operate. On another thread in here, some time
ago, Brian Burke was given permission by HIS CO to operate
amateur radio from a foreign land. Now all the JAG-wannabes
in here (PCTAs all) jumped all over Brian's case on that,
citing absolutely NOTHING germane, one (a "seven-hostile-action"
hero) even implying that the UCMJ didn't apply, only the FCC
regulations applied (they don't but the shell-shocked murine
didn't understand that).

Under the terms of the Kangaroo Kourt of the PCTAs:

If Brian Burke is guilty of improper amateur radio operation,
then Dan Jeswald is EQUALLY GUILTY of doing so from Germany.

If Dan Jeswald is not guilty, then Brian Burke is not guilty.

It's the SAME SORT of "OFFENSE" as codified by the PCTA.

>I think you are in need of the "trank" Lennie, I have NEVER said, or
>thought, that Ham radio is "super-secret" stuff. I have no idea where that
>comes from.

It comes from YOU, Dannie. That first quote above (marked with
three right-arrows). You say that I "have no knowledge about
amateur radio other than what I conjure up in my distorted
mind."

Amateur radio knowledge, practice, communications are all very,
very PUBLIC knowledge. Magazines and books about it exist all
over the world. NOTHING of it is secret (with possible exception
of certain rooms in Newington). Tsk, tsk, even I was a staffer
on Ham Radio magazine without having an amateur radio license.
I know several licensed radio amateurs, one of which was the
Best Man at my wedding, have communicated with others over
amateur radios (as "third party" activity), sat in on a few
ham club meetings. NO national security laws apply to amateur

radio, no radio amateur is "sworn to silence" about any amateur
radio activity.

>>>A Handi Talky made by Standard Communications was available, its

>> for you?" :-)
>
>Of course it was a CIVILIAN model designation. I never said it was a
>military radio.
>As usual, you just assumed. You do that a lot Lennie.

No, I didn't "assume" anything. I simply pointed out a very old
FACT of U.S. military radio nomenclature. Why do you wish to
argue such old facts?

Was this ham HT purchased by yourself or was it given to you
by the U.S. Army?

>>>The German repeaters ALL operated with a "whistle up" tone access. Just
>>>whistle it up and start to talk. Of course a Amateur Radio license was

>>
>There you are showing your IGNORANCE AGAIN LENNIE. Why would I communicate
>Military information on a Amateur Radio frequency.

I don't know "why," Dannie...that's what MILITARY INTELLIGENCE
("M.I.") might want to know in interests of U.S. national
security. You certainly had OPPORTUNITY. You now display
considerable emotional volatility. I don't know your political
mindset...other than what appears in here as a staunch
conservative.

All of the above can be a COVER. :-)

>>>Not a problem at all. I showed my CO the German License, my US License,

>> didn't check up on you? [ASA was still in existance in 1972]
>
>No reason to Lennie. I was perfectly legal by both German and US Military
>rules and regulations.

Colonel Rudolph Abel, KGB, was living in NYC, being "perfectly legal
to outward appearances," posing as an artist who had "ham radio for

a hobby." Only thing was that he was NOT "perfectly legal" after
an investigation. He was arrested, tried, convicted...later
exchanged
for U-2 spy plane pilot Francis Gary Powers.

>>>Being close to "unfriendly territory" was not a problem at all. You NOT
>>>BEING a ham of course, would not comprehend these things.

>> and "Q") for the simple reason that I've been around longer than
>> you have. Don't try this Tuff Guy bullshit with me.
>>
>Starting to get defensive eh Loser?

No, just reminding you that I've DONE military communications
at a communications station...BEFORE you did...and with LOTS
MORE radio equipment. The ACAN-STARCOM-DCS worked HF around
the world without any big problem in "frequency assignments."

>> Wow, real Tuff Guy stuff. I'll bet you tell some dandy "field
>> action stories" down at the Legion hall.
>>
>Well I guess from your point of view, a commando of the commo room, you
>would think that was a war story. We call your type a REMF.

Tsk, tsk, tsk. "We" call your type just a MF. :-)

You forget one thing. ALL soldiers in the U.S. Army are trained
to, and expected to, "close with and destroy the enemy." Signal
Corps doesn't have fancy Tonka Toy tracked vehicles, but we were
expected to fight on foot if needs be.

The Defense Communications System never had any problem with
HF allocations...it ran 24/7 until all the HF message routes
were replaced by other, faster message routes. That was in
the 1970s to the 1980s...a transition time for all the U.S.
military getting the start to the DSN (Digital Switched Network),
the government's own Internet (as some call it).

>

>>
>Not even you believe you said that.

Tsk, tsk, tsk...you just said your CO got his own ham ticket
after watching you play with your KY-116 on your knee... :-)

>We were field units Lennie. We didn't have air conditioned vans and sit in
>parking lots in Heilderburg. All we had available was HF SSB/AM/CW/RATT,
>VHF FM Low Band.

heh heh heh...I'm familiar with Field Radio, Danny Disabled.
In my time, my battalion also was the keeper of two dozen
AN/GRC-26s ("a shack in the back" in a hut on a deuce and a
half)...HF, with the ONLY "air conditioning" in the hut being
simple fans for "cooling" and the radios' heat for "heating."

>No kidding, again you can't seem to follow along Lennie. We are talking
>about the ARMY in the 70s and your total ignorance of commo systems in use
>and everything about Ham Radio. Next.

Tsk. Take that trank, Dannie, you are getting all flustered.

"Total ignorance of commo systems in use?" :-)

Now, now, don't tell me you "worked" the entire DCS of USAEUR
out of your "shack onna track" and "knew it all." :-)

Sweetums, after being IN ACAN-STARCOM-DCS nearly 20 years
BEFORE you, I KNEW much more than any ordinary Field Radio
MOS out in some boonies. Not only that, I've kept up with
it from the 70s onward, have the public documentation, and
know what is used TODAY, not 33 years ago.

>>>The most reliable commo was usually on the 40 mhz range FM VRC-12 units.

[went OBSOLETE a long time ago...]

So did the AN/GRC-106A which went operational about 1969, being
replaced by the IHFR (Improved High Frequency Radio) AN/PRC-104

and its GRC, VRC variants using the same R/T in the period 1986
to 1990. There's still about 1700 or so GRC-106s at Tobeyhanna,
shipped out/exchanged for various old military/government uses
now and then.

>> Was YOUR unit so 'special that you "needed" comms direct with
>> SHAEF Hq? :-)
>
>Had no need whatsoever to communicate with Belgium. We were a field unit.
>We just followed instructions and did the job.

...using Ham Radio. Yeah, some "job."

>In other words you don't know a damn thing about what I am talking about.
>Why don't you just shut up and stick with what you know and quite trying to
>act like some know it all Lennie?

I don't know it all. I DO know more about the world's
communications
means than you do. <shrug>

>of all not me. I could care less about Tokyo, etc. WE are TALKING about
>GERMANY in the 70s.

"We?" You mean YOU. I could care less about Germany of the 1970s.

Well, maybe a little of the Berlin scene of now...like how has
the area around the Ku-damm changed? :-)

>Where do you get this crap from Lennie? Have you had the screw tightned on
>your head yet ?

Tsk, tsk...more "civil discurse" from Dannie Disabled...

>There is NO SUCH THING MORON. Tighten that screw a bit more, you need it.

Well, there ya go, making them civil discurses again...tsk.

>I would like to apologize to all those, except Lennie, reading this tripe.
>I am obviously dealing with someone (Len Anderson) that is not quite right
>in the head, and possible mentally ill. His ability to reason is suspect
>also.

Poor Dannie Disabled. Like Stebie da wundermurine, he calls all
who disagree with him "not right in the head." Not a good grasp
of reality, that.

>I see no reason in continuing this debate with someone that is so incumbered
>by his lack of knowledge and common sense.

Poor Dannie didn't get the reply he wanted. Boo hoo.

Prolly didn't get the Hero medals from defending the Fulda Gap
from onslaughts of Soviet armor, fighting heroically with his
ham HT saving the battalion (and his CO). [it's beginning to

sound like Dannie's prose is looking more like a very bad carbon copy of a Tom Clancy novel first draft...]

Learn it yourself. It's "English".

Now...who's Nick, and WHY are you LYING about KY4Z?

> > KY4Z belongs to a guy in Kentucky named James.
>
> realy

"Really".

> > Why are you lying?
>
> Not lying at all

Sure you are.

You stated that those comments were made by "KY4Z".

That was obviously false.

It could have been written off as a simple typo except that you
tried to perpetuate it, ergo it went from being a mistake to being a
lie.

> was inseltuig our obvious interests but you are too dumb to understand

It was WHAT...?!?!

"inseltuig"...?!?!

That's not even REMOTELY close to a recognizable English word.

> > > > > Actually, I consider lying to be one of the RUDEIST things you can

> > You are a Liar.

Nope.

> You threatned to kill me.

I didn't "threatned" to to anything of the like.

YOU are PARANOID.

> Your threat was idle, and shows you to be a bully

No threat to be "idle". And If I were the bully you insist I am,
you'd be typing with one hand.

> that you were dumb enough to risk your freedom by making that threat is
> not flattering

I didn't make a threat.

And now you flatter me by trying to mimic my comments about you.

> > Facts.
> >
> > InDeed but none on your side

All on my side.

(and it's "indeed")

> > > > > Personaly I think threatening Murder is pretty rude

> >
> > I've said nothing of the sort.
>
> you have claimed it often

Then cite the quote.

I've never said anything of the like.

> when told about your responiblities for you actions angainst Todd you
> blamed Todd said it was all his fault

"responsibilities" "your" "against"

What happened to Todd WAS Todd's fault.

I did not seek Todd out and drag him into this forum. he showed
up all on his own.

I didn't ask him to "confess" to his numerous violations of both
state and federal law. He expressed his previous violations of those
laws all on his own.

I didn't ask Todd to use the lind of childish, profane language
that he did, nor to insult the memory of my daughter.

I didn't drive to Illinois and twist his arm and force him to
violate the terms of his TOS with Consolidated.

He did it on his own.

> > > > Many, many issues.

But no Amateur ticket ever.

> I have WORKED ("workee") IN radio since 1952.

But you've not WORKED an Amateur Radio station as a control
operator...

> <yawn...so difficult to get intellects in the newsgroup
> these days...no matter how many times I repeat it some
> still can't get it right...>

Perhaps if YOU got it right and in the proper relevence, you might
be on the same sheet of music.

Until then, we're Top 40 and you're a funeral dirge.

> Why is Davie MAKING FUN of Asian minorities with bad
> vaudevilian stereotypical speech?

Perhaps for the same reason YOU have done it in the past...?!?!

Hypocritical putz.

THE SHITCAN MAN
With apologies to "Willy Wonka and the Chocolate Factory"
- as recorded by Sammy Davis Jr. with the Mike Curb Congregation

Who can take a Wiseman, sprinkle him with Joo
Cover him with shame and a Yiddish name or two
The ShitCan Man, oh the ShitCan Man can do
The ShitCan Man can 'cause he mixes it with truth and makes the world take note

Who can take a gay lame, wrap it in a sigh
Soak it in the sun and make a groovy Wiseman pie
The ShitCan Man, the ShitCan Man can
The ShitCan Man can 'cause he mixes it with truth and makes the world take note

The ShitCan Man makes every post he moves go away to shit can limbo
Now you talk about your childhood wishes, Woger's living with the bitches

Oh, who can take NIM Busters, dip it in a dream
Separate the trash and collect up all the cream
The ShitCan Man, oh the ShitCan Man can
The ShitCan Man can 'cause he tends to it with care and makes the board look good

The ShitCan Man makes every post he moves go away to shit can limbo
Talk about your childhood wishes, Woger's living with the bitches

Yeah, yeah, yeah
Who can take NIM Busters, dip it in a dream
Separate the trash and collect up all the cream
The ShitCan Man, the ShitCan Man can
The ShitCan Man can 'cause he tends to it with care and makes the board look good
Yes, the ShitCan Man can 'cause he tends to it with care and makes the board look good
a-ShitCan Man, a-ShitCan Man, a-ShitCan Man
ShitCan Man, a-ShitCan Man, a-ShitCan Man
ShitCan Man, a-ShitCan Man, a-ShitCan Man

What you are "getting through to (me)" is this:

(1) That you're a pathological liar that can't tell the truth
since it will disrupt your rants in this newsgroup. What a petty
excuse for not telling the truth.

(2) You exhibit significant paranoid behaviour. Your constant
rants of "stalking", "bully" and "attempting to kill me" are classic.
Wrap this up in your "I am a victim" personna and you have some pretty
lame stories.

(3) You probably are a fairly intelligent person, but you INSIST
on LOOKING like an idiot. Your excuses as to why you can't manage to
spell check your posts are transparent, baseless and are in direct
opposition to OTHER posts you've made about what great resources you
have at your disposal. Again...More stories that your OWN words
unravel.

Your spelling HAS been getting better...Now if we can just funnel
it into more coherent sentences based on some truth, you'll be well on
your way to getting better as a human being.

Steve, K4YZ

## 2145. Stevie still thinks the NG prehaps the world revolves around him

nope

pruning

you certainly are

>
> > You threatned to kill me.
>
> I didn't "threatned" to to anything of the like.

you certainly going on and on about being a marine sniper and then "one
Shot One kill ..."

You have the nerve to call me a liar at times for mere typos so you
made the threat wether you menat it or not

and No meaning it just makes you a bully

>
> YOU are PARANOID.

you know you are a bully and coward

You blew it by making the threat and are still trying to cover it 7
years later

>

You know MS Flint claiming that Morse Code is so different that specail
in Education In LD educatio who are ham themselves can't teach it
right, is pretty bad

You are starting to sound like Stevie, "he didn't work hard enough"
didn't have the right teacher etc

what was the point?

If effort was the point I put it in

If code was that manifextly import why does the ITU and the FCC disgree with you

Even if you happen to be right why should I spend more time on the off chance you are right

Pearl Harbour was an act of aggression by a sovereign state, 9/11 was an act
of terrorism, defeating terrorism requires a different approach to defeating
a sovereign state, which is why the British didn't invade Eire because of
the IRA, and goes some way to showing how co-operation and pragmatism led to
the disarmament of the IRA.

Which also incidentally shows what a wanker Tony Blair is as he knows very
well the current approach to Islamic terrorism is not the way to end
terrorist activity.

Everybody should be politically frustrated as it provides democratic
dynamism, better than being politically apathetic. As for the religious
component I am particularly comfortable in that department.

Don't see how your comments follow but thats a matter for you.

> there any errors of fact for which you feel it is necessary to own up?

no

as you requested I googled you posts I found those and more in the same
vien (online flirting)
but no posts that could identified as giving your side of the story on
Tanzania

>
> Why, if you'd make *these* errors, your understanding of my operating
> habits while in Tanzania could also be in error, couldn't they?

no errors at all

certainly not with anything you have said

>
> Is there anything at all you'd like to say in reference to your major
> error on this matter?

no error

they are your posts and quite a number of them from what I found not
that I bothered to read all of them

But nothing as promised on Tanzania

KY4Z didn't promise any "action".

As a matter of fact, KY4Z has not posted to this group at any time
I am aware of.

That's four times you've misrepresented facts, Markie.

Why are you lying?

> The best response so far is Stevie sugeesting that people are going to
> look at me funny in public and drive slowly by the house

No, that's not "the best".

> Stevie, Stevie, grow up and leave behind these stupid mind games

Markie, Markie, stop being a pathetic liar and deceiver.

> It would be nice for you point out your alleged action I would not want
> to miss it

Just look around, Markie.

Steve, K4YZ

"committed" "adultery" "amongst" "obfuscations"

He did nothing of the sort, Markie.

His copy of those posts VERBATIM proves it.

> > Mark, isn't a big, steaming plate of crow waiting for you? Is there
> > anything you'd like to clarify? Anything you'd like to mention? Are

Sure there is.

Anc considering what else you've admitted putting in your mouth,
some well-seasoned crow should be a breeze.

> as you requested I googled you posts I found those and more in the same
> vien (online flirting)

"vien"...?!?! You meant "vein", perhaps?

W H E R E was the flirting, Markie?

Where was the innuendo? Where were the suggestions?

> but no posts that could identified as giving your side of the story on
> Tanzania

He's done that ...over and over and over...

Seems we know who the BULLY is here now!

Provided with FACTS over and over, you continue to try and badger
and batter Dave Heil, a man of both persoanl and professional character
that you could never HOPE to achieve, in this life or the next two.

> > Why, if you'd make *these* errors, your understanding of my operating

>
> no error

Absolute error.

> they are your posts and quite a number of them from what I found not
> that I bothered to read all of them

Oh...You acknowledge that you didn't bother to read them, yet
claim you are making "no error" as it pertains to any statement of
Daves.

Idiot.

> But nothing as promised on Tanzania

Nothing that you haven't already been provided or yourself
acknowledged, Markie.

> I am aware of.

then why are you jumping up and down, if you ae not the person under
disucsion then you lack standing to complain
>
> That's four times you've misrepresented facts, Markie.

No misrepresentation
>
> Why are you lying?

not lying at all

Making a joke

after all you though it funny or something to to call me KB9EQZ

then refuse to apologize for it properly

>
> > The best response so far is Stevie sugeesting that people are going to

he asked for it I delivered

cuting more Stevie rambling

> > but no posts that could identified as giving your side of the story on
> > Tanzania
>

> He's done that ...over and over and over...

none found by the search
>
> Seems we know who the BULLY is here now!

Yes you are Stevie

Indeed Dave and Stevie both lazy folks that want other to do THIER work

>
> Provided with FACTS over and over, you continue to try and badger
> and batter Dave Heil, a man of both persoanl and professional character
> that you could never HOPE to achieve, in this life or the next two.

No facts provided by Dave

just Dave advocating that anything he can get away with is good
practice

I hold to a higher standard which isn't hard

>
> > > Why, if you'd make *these* errors, your understanding of my operating

More stevie distortion

I did not bother to read a lot of the post to Ms West virgina
but nO i did not try and read the text of all 2000 plus post looking
for a few scraps

>
> Idiot.
>
> > But nothing as promised on Tanzania
>
> Nothing that you haven't already been provided or yourself

> > have at your disposal. Again...More stories that your OWN words
> > unravel.
>
> I don't waste resources which Is why I have suffiecent resources

Obvioulsy you do NOT have "suffiecent resources".

Much of what you need is either freeware or very inexpensive
software.

You claim to be some sort of "professional" with "pool of typists"
at your disposal, but then you claim you can't afford less than $50
worth of software.

The lie is transparent.

> but here they would be wasted

No they wouldn't.

> Even in a post with nothing spelled wrong my post to the FCC you can't
> manage to say anything on point

The problem is you didn't! Your post was rife with spelling
errors!

The third paragraph was full of typos, and the grammatical
structure looked as though it was fired from a shotgun.

And WHAT were you trying to say about privileges before 1998?

It looked idiotic!

> > Your spelling HAS been getting better...Now if we can just funnel
> > it into more coherent sentences based on some truth, you'll be well on
> > your way to getting better as a human being.
>
> you are the liar

I am...?!?!

Your spelling's not getting any better?

And like it or not, until you learn how to USE the English
language like the rest of us, you'll still look like a pathetic idiot
trying to string words together with Crazy Glue.

Osric:

When we fought the british to secure america for the citizens here, we
became the original terrorists.

The british would march out on to the field to battle for honor and glory,
we would hide in the bushes and pick them off like vermin. Surprise
attacks were our specialty.

We should be darn prepared to go toe-to-toe with the tactics the
terrorists throw at us now. We get need a while to get sick and tired of
their tactics, then move to crush them for being the uncivilized dangerous
animals they are...

Nothing is guaranteed in this world, except their are brave hearts and
cowards, this is just time to separate those two...

John

You delivered nothing but more evidence of your foolishness

> cuting more Stevie rambling

"Cutting".

There was no rambling.

QUOTE:

> as you requested I googled you posts I found those and more in the same
> vien (online flirting)

"vien"...?!?! You meant "vein", perhaps?

W H E R E was the flirting, Markie?

Where was the innuendo? Where were the suggestions?

UNQUOTE

Markie, Y O U are the one who alleged that Dave was doing something
that violated either religious doctrine or his marital vows.

You've been asked to substantiate your claims.

Were these claims from the same "vein" as your "I am a Colonel in
the Army Chemical Corps"...???

> > > but no posts that could identified as giving your side of the story on
> > > Tanzania
> >
> > He's done that ...over and over and over...
>
> none found by the search

Sure there were. He's re-told them 1000 times over.

Seems you want him to "carry your freight", LiarBoy.

> > Seems we know who the BULLY is here now!
>
> Yes you are Stevie

Nope.

> Indeed Dave and Stevie both lazy folks that want other to do THIER work

The "WORK" here, Markie, is for YOU to prove YOUR assertions that
Dave acted improperly as control operator of an Amateur Radio station.

YOU made that assertion. Now it's YOUR "work" to prove it.

And you may add to that "proving" where Dave allegedly commited
the aforementioned "flirting" with "another mans wife".

> > Provided with FACTS over and over, you continue to try and badger
> > and batter Dave Heil, a man of both persoanl and professional character
> > that you could never HOPE to achieve, in this life or the next two.
>
> No facts provided by Dave

Sure he has.

> just Dave advocating that anything he can get away with is good
> practice

Let's see...Dave's name appears over and ovr again in Amateur
Radio periodicals over a 12-15 year period...I don't see KB9RQZ in a
one!

> I hold to a higher standard which isn't hard

YOU hold nothing except your own opinions in high regard,
Markie...

And by your own admission you are a prolific liar. Not to be
trusted to be truthful in ANY event.

> > > > Why, if you'd make *these* errors, your understanding of my operating
> > > > habits while in Tanzania could also be in error, couldn't they?

> >
> > Oh...You acknowledge that you didn't bother to read them, yet
> > claim you are making "no error" as it pertains to any statement of
> > Daves.
>
> More stevie distortion

Nope.

Here's your words AGAIN: "they are your posts and quite a number
of them from what I found not that I bothered to read all of them"

"...not that I bothered to raad all of them"

So...Whatever "opinion" you made was based on incomplete
information.

> I did not bother to read a lot of the post to Ms West virgina
> but nO i did not try and read the text of all 2000 plus post looking
> for a few scraps

And "scraps" would be all you could piece together. I could take
enough "scraps" from hacked-together comments you have made to prove

you an al-Queda member.

The WHOLE truth is what counts.

> > Idiot.
> >
> > > But nothing as promised on Tanzania
> >
> > Nothing that you haven't already been provided or yourself
> > acknowledged, Markie.
>
> Indeed nothing which mean I have to accept Brain's account as correct

How could his account be correct?

(1) Was he there?

(2) Was he party to the QSO's made?

(3) Does he hold licensure in France or Tanzania?

(4) Does Brain hold a degree in radiocommunication law, domestic
OR international?

> Dave is gulty of Poor Ham practice and of Promoting Same

Prove it.

From what legal source do you set this milestone?

From what PRACTICAL EXPERIENCE in radio communication to YOU draw
an informed opinion?

From what DOCUMENTARY EVIDENCE do you glean these insights? From
Brain's posts? Brain's almost as big a liar as you are, Markie, and
his "DX" saavy is even worse.

Brain overtly operated an Amateur Radio station WITHOUT LICENSURE
from a UN controlled zone. And you're going to take his "word" over
that of an internationally reknowned DXer and DXpeditionist like Dave
Heil...?!?!

Brain Burke is your "higher standard"...?!?!

Should Hams in their operator respect the intent of the rules or just obey the letter?

Should hams Hide behind the rules or stand up and say you know I think this is right and the rules are wrong

Are we self policing or not?

Should we be self policing?

AOF:

The fcc has an avenue where ideas for change, restructuring and progress can be introduced.

In the past, the ARRL seems to quickly leap to the forefront of this process, claim they represent all amateurs and lobby for the issues in the way they would them implemented... a vast influx of new people may be able to knock that strangle hold which a few at the bottle-neck were able to achieve--loose... change appears on the way, time will tell... after decades of decline and stagnation, cures are not to had over-night.

AOF:

You know, there is an experiment which was done in the pursuit of studying animal behavior and psychology: (and lets' face it, humans are animals)

A frog was tossed into a pan of water which was dis-comfortably warm--he jumped out immediately to seek a cooler spot.

A frog was tossed into a pan of water which as dangerously warm--same occurred, frog left for cooler areas.

Now, a frog is placed into a pan of nice cool water to its' liking, and the water ever so slowly warmed. Even when the temperature climbs to the point where the frog expires, rolls over, and becomes SK (no more croaks ever!) it remains within the pan of water. All of the biological safeguards which uncounted eons of time had given that frog to escape danger have been defeated, and all because it happened so gradually...

So is the saga of amateur radio... and it has taken decades... now comes the wake-up call.

I agree 100% with Dee's ideas expressed above. If something is worth
writing, it's worth writing clearly.

This doesn't mean we're all Shakespeares. It does mean we can at least
do what we can to use correct spelling, grammar, punctuation and
capitalization.

--

An analogy:

Suppose there are a group of hams who regularly QSO on VHF or UHF FM.
Although they use different rigs, all have signals with "good audio" -
clean, crisp, clear, easy to listen to and understand.

Then a newcomer shows up, with a signal that has really poor audio.
Muffled, distorted, very unclear. Not weak, off-frequency or
over-deviating,
just not clear. Varies from 'requires a careful listen' to 'completely
impossible to understand'.

Fortunately it is discovered that the problem lies in the microphone
being used by the newcomer. It's the original that came with the rig,
which is no longer made. Nothing wrong with the rig itself, it's the
mike which is the problem.

But the newcomer refuses to replace the microphone. Says it's too much
trouble, costs too much money, and a new mike wouldn't be as easy to

use as the old one. Plus he doesn't think his audio is all that bad in the first place.

Newcomer finally says that if the group can't understand him, it's *their* problem, not his, and he shouldn't be expected to spend money, time and effort to get a new microphone for his rig.

How should the group respond?

Where does it suggest in FCC rules that you are allowed to deviate
from the letter, Mark?

And who's going to be the arbitrator of what is "rule" and what is
"intent"?

Part 97 of the FCC Rules and Regulations are set up to do both,
but on a limited basis.

The "Basis and Purpose" of the ARS as defined in 97.1 establishes
"intent" for the deployment of the Amateur Radio service. But in that
"intent" does not set any "rules" for operating.

The remainder of Part 97, for the most part, makes specific do's
and don'ts, ie: operating bands, power limits, identification, etc.

The Constitution of the United States is a document drawn up in
such a way as to be intentionally susceptible to "interpretation" and
change as current needs dictate.

RULES are just that...rules. They usually specify certain things
you MUST do, things you MAY do and certain things you must NOT do.

Although not always successful, they are written so as to be as
unambiguous as possible.

> Should hams Hide behind the rules or stand up and say you know I think
> this is right and the rules are wrong

That's what the rule making process is all about, and people
already use it every day. As for "hiding", what are you talking about?
You either comply with what is written or you don't.

> Are we self policing or not?

To the degree allowed by law. Then the law steps in.

> Should we be self policing?

What's your alternative?

One you you try analogy that is valid

you could also be man enough to say what you mean

For example to addmto your analogy

It is only those that disgree with the newcomers views that find him so
impossible to understand

It it also truns out not to be his mike but his voice that has problem

and of course tell get off the air till you can fix your voice

and of course Ham operators are so accepting

IMHO, hams should respect the intent of the rules as well as the exact letter of the rules.

The trouble is that different hams have different ideas as to what the intent really is.

> Should hams Hide behind the rules or stand up and say you know I think
> this is right and the rules are wrong

If someone thinks a rule can be improved, they should say so. However, they should understand that simply because they think a rule isn't the way it should be doesn't make it 'wrong'.

I don't see how someone can "hide behind the rules".

> Are we self policing or not?

> Should we be self policing?

A lot depends on what is meant by "self-policing".

IMHO, hams themselves can do the following:

- Inform fellow hams of observed or suspected violations ("Did you know your signal is so wide it's bringing up the repeater on the adjacent frequency?"

- Set a good example in rules compliance

- Inform FCC of uncorrected violations

- Have nothing to do with those who commit repeated and/or serious violations.

But enforcement by FCC is still needed. That doesn't mean FCC is expected to do everything, however.

The "notching" solution is simple: Their BPL system does not use
frequencies that are also ham bands. Whether it works or not is an open
question.
>
> You can listen to the stream at:
> http://www.npr.org/templates/story/story.php?storyId=4801446

I did - interesting piece. What they neglect to mention is that:

- BPL is a "last mile" delivery method, not a complete system. Still
needs a 'head end'

- BPL bandwidth is shared between users on the same line, so as your
neighbors sign up and use the system, your performance degrades.

- There are several BPL technologies out there, not just the one they
profiled.

- There are other technologies (like Wi-Fi) which can do the same job
without all the fuss and bother.

- The big danger of BPL is that it turns the whole idea of spectrum
protection and allocation upside-down, and sets a bad precedent.

I wonder how rosy a solution they would think it was if BPL interfered
with FM broadcasting, reducing the utility and availability of that
mode of communications?

> If would be great if a qualified ham could respond to their article.
> They usually take listener comment and broadcast those comments the
> next day or so.

A qualified ham was part of the article. The rest of us should comment,
too.

---

One thing the piece proved was that the media, and particularly
National Public Radio, are not all a bunch of 'tree-hugging liberals'.
BPL is a
poster technology for the Bush Administration, who thinks BPL can do no

wrong. The best BPL analogies I've seen describe BPL as unnecessary spectrum pollution, and you'd think a bunch of 'tree-hugging liberals' would be against anything that pollutes half as bad as BPL has been shown to do. The article also accepts without question the idea that fast internet access is a necessity for all Americans and their communities - another Bush Administration bit of rightthink.

Thanks for posting the link. Anybody besides me and the original poster actually listen to it?

"Willy Wonka" <wonka.w@no.spam> wrote:
>
> THE SHI

Contestant Davies,

That has to be the worst song parody ever written. You have proved that in addition to your other numerous shortcomings, you are also bereft of talent. Your "songwriting skills" are as poor as your employability skills. You cannot write above a first grade level, and your "attempt" to integrate subjects you are familiar with onto a song is like all your efforts, you fail miserably. You should consider taking a "creative writing" or "poetry" class, since you obviously cannot do either one. Roger's song parodies are much superior than your efforts, but then everybody's efforts are superior than yours.
Just like you cannot go without making a homosexual reference in ever post. This is an obvious freudian slip on your part, since apparently, you want to announce to the world that the reason you are a 31 year old virgin is that you are a homosexual. You were too lazy and stupid to construct a decent parody with a decent presentation, similarly, you are too stupid and lazy to put forth the time and effort to learn morse code or the theory for a higher class amateur radio license. Whichever "college" or "school" you "claim" to have "attended" should be immediately contacted by you and asked for a full refund, since you obviously did not learn a thing. Your delivery in that falsetto voice, which by the way, sounded like Tiny Tim gargling razor blades, prove that people like you who are so gullible that they think they can enter a contest like this should be locked away for the public safety. "American Idol?"...you are more apt to be the winner of "American Assclown."
NEXT!

Get it straight, Mark. Don't lie or distort. The woman in question is
*not* a stripper or even a striper. There were no words of mine of a
flirtatious nature. I provided verbatim quotes. There was no
"personals newsgroup". To sum up: You look like an incredible fool or
a baldfaced liar.

>>Mark, isn't a big, steaming plate of crow waiting for you? Is there
>>anything you'd like to clarify? Anything you'd like to mention? Are
>>there any errors of fact for which you feel it is necessary to own up?

> Tanzania

You couldn't correctly identify them if they smacked you in the chops. All the material relating to your silly "charge" concerning my operations from Tanzania are there. There is no material on flirting. By the way, newsgroup postings are *not* online. It would appear that you owe an apology, bucko.

>>Why, if you'd make *these* errors, your understanding of my operating
>>habits while in Tanzania could also be in error, couldn't they?

> no errors at all

No errors? You have no facts at your disposal. Even after reading Brian Burke's recent postings on the subject, you've not acknowledged your own false charges. You can be seen as either a maladroit or as malicious.

> certainly not with anything you have said

>
>

Except for the facts that the material didn't come from a personals
newsgroup (as you claimed), did not reveal me flirting (as you claimed)
and that the woman you quoted isn't married (as you claim). We could
add that the exchange you claim I had with a "bisexaul" female didn't
take place at all. I guess that about sums it up.

>>>>Mark, isn't a big, steaming plate of crow waiting for you? Is there

Phil:

At the core of the "Radio Act of 1912", and grossly paraphrased here by me, seems the statement, "Here you guys sign up and get registered, then take this range of freqs and see what you can do with them. See if you can come up with ideas which advance the use of radio and we can use in the benefit of america and its' citizens."

Somehow, along the way, things got bogged down and an abundance of people came to the hobby who wanted a set of rules which they could religiously worship and practice and invoke for disciplinary actions to be taken on others not holding a religious reverence for such, this has been detrimental to the original purpose and goals...

This now lays at the extreme end where you must be careful what experiments you undertake, how you undertake them and why you can't undertake them... in someways there are "guards" on the bands as exist in prisons, and you are "allowed out in the yard" if you obey all the rules... strange for a hobby first created as a means to try new ideas which could possibly lead somewhere...

BPL is perhaps a very good example, where arrl and other "status quo" forces banded together and ended up having the effect of saying, "We already know that won't work! Don't attempt any experiments, don't do any testing, don't gather any data, don't lay any plans. Don't plan on being able to change and redesign hardware/software to attempt to make it work! Cease and desist immediately, we so command you!"

Entering dave heil (without the quotes) and tanzania returns 3470 hits
on the Google web search. The same brings 150 hits using Google Groups.
If k8mn and french are entered, you'd get 86 hits. If you try 5h3us and
french, you'll come up with 40 hits unless, of course, you are Colonel
Mark Morgan. In that case, you'll find nothing.

Dave:

If I enter "a" as a google search term, there is a good change google will not return all the results, as there will be close to eight billion, most likely!

However, in my search the intent was ONLY to return relevant pages to then search by "hand." Eight billion would take too long, but I am sure those 46 pages would be there... if you have the time, go for it!

Just why would I want to do that, "John"? Those items mentioned by me
were *directly* relevant.

The problem I have with some of the rules is that they are too vague.

N9OGL keyed in his worry of, "The problem I have with some of the rules is that they are too vague."

John thought, "Well, that beats those who don't like the rules because they don't demand what the person in questions believes "should be." Or, wants rules instituted which are conductive to that persons wants and personal desires."

John further hoped this was no ones intent here, control and establishing rules for personal likes/dis-likes of that person and/or his group of "good ole buddies"--but being of a naturally suspicious nature, John kept one eye open...

Hello, John

Unfortunately it is most likely that anyone who told the whole truth would loose support from his or her party.

I've been working temporarily at a sheet metal shop as my pension alone doesn't really cut it. I see machines with no guards. One gal had her finger crushed yesterday in a die stop. Not a pleasant thought.

Fortunately, I've had 3 calls from different companies. I start Monday at a new permanent job paying over 3 times what I am making now. Not too bad. I liked what I saw at that place; they truly seem to care. They also don't pay sick time until you are out for 8 days. That is an excellent idea which does protect the employee from disaster whilst protecting the employer from the idiots that like to call in sick on Friday and/or Monday ;)

I have little use for those type folks (folks that want to get paid but don't want to work).

Fine rhetoric, simplistic nonsense. Try looking at the tac-tics of succesful
anti-terrorist campaigns like Northern Ireland where the more the British
Army sunk to the levels of the terrorists the worse things got, until they
woke up and smelt the coffee. It was British repression in North America
that turned a tax revolt into a successful war of independence.

It will take an organized group to do this though. People have two choices. One is to join the ARRL and change it to pursue the policies near and dear to their own hearts. The second choice is to form a new group that is large enough and organized enough to lobby for what is near and dear to their own hearts. Just saying the ARRL should change won't do it.

Wasn't really a ''tax revolt''. It was a rising up of brave and very
smart humans against flaming assholes.

Hello, Jim

Yes, I listened to the link provided. It has possibilities - good possibilities - but we need to see a demonstration that showes little or no interference.

Ed Hare demonstrated a *ton* of interference. Yep, they put the blame on amateur radio operators for complaining, but fail to realize that commercial television (channels 2 and 3 in the U.S.) as well as other users fall into the spectrum used by BPL.

I think most folks would put up with a *very* small amount of interference, but what Ed Hare turned up was anything but small.

The speed sounds interesting, but I'm running between 4 and 7 megabaud currently on DSL ;)

Actually we have a ham right here in our area who does have a voice problem due to cancer, throat surgery, and artificial voice box. He goes the extra steps to make sure that his mike characteristics are the best possible so as to minimize adding distortion. He makes sure his deviation and modulation are set so as to minimize any additional distortion. The result is that he is perfectly understandable even though his voice is now harsh and grating with some distortion from his medical condition. We can all tell that he has his radio & mike as perfectly adjusted as it is possible to be. Naturally we talk to him. So the analogy still holds up since his mike and radio adjustments would be similar to using a spell checker/grammar checker in the written word.

I think it is a rotten idea. People will drag themselves to work when they are sick and spread it around. This results in even more people being sick and reduced productivity.

As a result of the past year, I am very sensitive to the issue of people coming around me when they are ill. You see I caught pneumonia in April 2004. Pneumonia was going around the area at the time. I may have caught it at work, from family (who may have caught it at work or school) or other public places. That dragged my resistance down and I ended up with a blood infection. The blood infection resulted in a hole being eaten in my heart valve. I had to have two surgeries, one of which resulted in another infection. I ended up spending 12 weeks on intravenous antibiotics altogether and lost over 6 months from work. When someone comes to work ill, I stay as far away as possible. With a replacement heart valve, I don't dare take any extra risks of infection.

I agree wholeheartedly with this but don't use the no sick leave to stop it. It's too hard on the rest of us. These people can be detected by behaviour patterns.

Oh I see, fair enough. We do get crossposted all over the place, I only
actually contribute to talk.politic.mideast directly but the amount of
crossposting makes trimming prohibitive and make the amount of contributions
on google seem enormous, but it does lead to some humerous responses from
people in places like soc.culture.homebrew. All part of the internet's rich
tapestry and who knows I might pick up something about short wave radio in
the process.

What on earth made "Concerned Citizen" think this thread would be relevant
to RRS is beyond me but there you go. Hopefully when this thread dies your
radio discussion group can go back to peacefully discussing bouncing radio
waves off clouds all the way to Rio de Janeiro free from the unruly masses
discussing butchering each other!

# 2211. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-17 22:52:33 UTC
From: LenAnderson@ieee.org
Message-ID: <1124319153.107603.156330@g47g2000cwa.googlegroups.com>
Source record: 116612

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of midnight, EDT, 16 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1612

Indeterminate/duplicates (note 1) 72

Unambiguously Against NPRM (note 2) 443 28.14%
Unambiguously For NPRM (note 3) 908 57.69%
Code test ONLY for Extras (note 4) 223 14.17%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 16 Aug 05 that would be 1574.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

bet off

Er, John, the FCC is the >>ONLY<< avenue to travel. :-)

>In the past, the ARRL seems to quickly leap to the forefront of this
>process, claim they represent all amateurs and lobby for the issues in the
>way they would them implemented...

Before about 1993 (give or take), the only effective
organization for anything before the government was the one
with a lobbyist or legal representative IN the DC area. The
ARRL has TWO, a legal firm and a lobbying firm (its on their
federal tax forms filed with the government...public documents,
not privileged).

The GPO printed up the Federal Register in the late night
before and in the wee small hours of the morning of the day
a Register was released. Wasn't like a magazine printed one
to two months before its issue date. Postal service was only
as swift as anyone could afford: USPS, FedEx, UPS all charged
more for overnight delivery...but otherwise were the same
speed for regular surface mail - at least three days. If you
didn't have anyone able to get into the FCC Reading Room then
you waited days and days to get news or information.

After the Internet went public in 1991, the U.S. government
jumped onto the Internet (with the help of leadership for that
from Algore) with all four paws. Suddenly the government AND
the military was all over the 'Net. What we got (in what seems
like "overnight") was something we did NOT have before: Instant
access to OUR government from our homes and businesses with none
of the (formerly) necessary middleman to go through like a
membership organization or special interest group. NO waiting
for days and days to get a response by mail, NO need to rack
up expensive minutes waiting for some long-distance telephonic
answers, NO possible distortion of news through anyone. The
information was now THERE...from the agency/office that created
the news! Remarkable stuff!

In one way, it was like the maritime world of 1900. Ships at
sea just did NOT have any way to communicate over the horizon

quickly before radio. Suddenly they GOT a means to do that
and it was ten kinds of wonderful, even if the average rate
was 10 words per minute (faster than signal flags and semaphores
in optical sighting to the horizon). In the same way, we
citizens (in many lands) can communicate DIRECTLY with OUR
governments. No "horizon blockage" from middlemen groups that
acted as quasi-governmental "representatives" (which weren't
government and thus without any security that they were honest).

> a vast influx of new people may be
>able to knock that strangle hold which a few at the bottle-neck were able
>to achieve--loose... change appears on the way, time will tell... after
>decades of decline and stagnation, cures are not to had over-night.

What MUST be done is to de-brainwash, de-toxify all that
conditioned thinking put there by special interest groups.
To those NOT of the congregation of the Church of St. Hiram,
we can see the fantastic propaganda opportunity of having a
combination PUBLISHING HOUSE and a membership organization.
It's a guaranteed built-in brainwashing attachment to have
almost COMPLETE control of that publishing output. The ARRL
has been doing publishing - with complete CONTROL of ALL
contents - since the end of World War One, roughly 85 years
or more than four generations and longer than most folks'
lifespan. With such a long-running TOTALLY CONTROLLED
information source, the League has established themselves
as a virtual monopoly on "what is good for amateurism."
[the League knows what is best for you...etc., etc., etc]

With such a fantastic environment for conditioned thinking,
it is NOT remarkable that lots of folks Believe in all that
the ARRL dictates. They became a virtual Big Brother for
U.S. amateur radio, a personification of Orwell's "1984"
novel of the 1920s. It's not a "conspiracy theory." It is
out in the open and has been for years. Before the Internet
went public in 1991 the ARRL was *the* interface for the
radio amateur and his/her government radio regulating agency.

Times have changed remarkably. First of all, the REST of
the radio world wasn't looking to any ARRL to advance the
state of the art of radio communication...they simply went
ahead and DID it. The REST OF THE RADIO WORLD pioneered
the "shortwaves", SSB radio, TTY-RTTY-RATT, FM voice, TV
and facsimile, microwave and orbiting satellite radio
relay, moon bounce...and international networks as public
access communications providers before the amateur "NTS"
became successful. The maritime world now uses SSB voice
and TOR data on open water...and VHF voice on inland,
in-shore communications...the "sparkies" are a memory.
Police departments were testing FM voice radios before
we got into WW2 and set the pattern for ALL public safety

agencies' mobile radio communications; they just didn't bother with any morsemanship (except in certain reported midwestern states) for 24/7 emergency communications (that happen every day across the country). The brainwashing that "CW is necessary for emergency comms" is TOTAL MORSE MYTH a la conditioned thinking in this new millennium; the Titanic tragedy happened 93 years ago, two years before the ARRL was ever formed (originally as a private group to hack telegraphic providers by doing their own "message relay" - from ARRL's own history).

The history of the REST of the radio world has been made and is documented fact for anyone who bothers to look... there's an enormous amount of it. The ARRL, if it bothers to mention any of it at all, will gloss over that and imply that "amateurs pioneered it all" which is patently untrue. But, the myths still exist in many minds who accept the conditioned thinking wash-and-scrub as "fact" because anything else is Against what they WANT to Believe.

Some want the amateur radio hobby to be something noble, glorious, and IMPORTANT...perhaps with TITLES so that they can be "better" than others. They are wannabe SERVICEMEN in some imaginary uniform "serving their country" by doing a radio hobby! [they are either on a round-the-world ego trip or need to rationalize all the money and time spent on the hobby] THAT sort of thinking can't be over-come by logic or normal reasoning...without having the medical psychiatric smarts to restore sanity. Ain't enough gray-cell soap in the world to make them come clean in a short time. Gonna take a lonnnnng period of scrubbing.

boo ego

Poor Lennie.

Can't stand it that there ARE other avenues "where ideas for
change, restructuring and progress" may be "introduced".

Means he can't remind us of how impotent he is.

Snipped 107 lines of ranting about the discussion procees and
Lennie's trademark swipes and insults at Amateur Radio.

Putz.

I disagree!

Power lines were never meant to carry HF communication signals.
They're lossy at HF because they radiate! The whole concept
is deeply flawed. By allowing BPL systems, FCC is setting
a very bad precedent by saying it's OK to pollute the electro
magnetic spectrum with noise, even if there are viable
alternatives to the noise-producing technology.

All the notching does is to promise that particular system won't
pollute the ham bands with noise. Maybe. What about harmonics and
other crud?

Some might say that FCC cannot ban BPL as such, but that's
simply a semantic runaround. All FCC needs to do is to set
very low radiated energy standards for BPL and other non-point-source
systems, and the problem is solved. But FCC refused to
see the difference between, say, a computer monitor that is
a point source, and a BPL system that involves miles of wire.

> Ed Hare demonstrated a *ton* of interference.

Ed and others. Carl, WK3C, did some measurements and
observations of the Emmaus system as well - to name
just one other.

> Yep, they put the blame on
> amateur radio operators for complaining,

That's like blaming the fishermen for
complaining that the sewage plant is
killing off the fish because the sewage
isn't treated right.

> but fail to realize that commercial
> television (channels 2 and 3 in the U.S.)
> as well as other users fall into
> the spectrum used by BPL.

Heck, the second harmonic of 44-54 MHz
falls right in the FM band. I wonder
what they'd say if NPR stations were rendered
inaudible because of BPL?
>
> I think most folks would put up with a *very* small amount of
> interference,
> but what Ed Hare turned up was anything but small.

Why should licensed radio services have to put up
with *any* unnecessary interference?

Is there no other way to deliver broadband internet
access?

> The speed sounds interesting, but I'm running between 4 and 7
> megabaud currently on DSL ;)

And that doesn't drop if your neighbor is doing big downloads.

Jim:

Well, I think we really need to think about dropping the workday to 4 hours (or 2-1/2 eight hour days), and demanding everyone in america have a job and giving them opportunity to have one. As machines take over there will not be work for everyone, obviously we cannot have people living in poverty, staving, etc. The time to do this is NOW... the computer has already made one heck of a dent in employment!

Probably the largest group of wage earners in america are attempting to glean a living from minimum wage or close, I think I would starve at minimum wage, I can't even fathom that! It is beginning to show in the city I am living in--in many ways it is taking on a "third world flavor." With every city/county ballot there are increased taxes for water/sewer/roads/public buildings/public benefits for the poor, etc... I am afraid I will drive into a pothole one day and never be seen again...

We have been distracted and torn apart by racial, political and just trying to stereotype people. Time to focus on the fact all american citizens have to eat, have housing, medical, secure old age, etc, etc... else, one day they get dangerous and one day come to steal ours.

It is crazy in calif, vast numbers of foreign people come it to take jobs and vast ghettos of unemployed, apparently unwanted americans just sitting there and finally falling to drugs and crime to survive--then end up in our prisons surviving! A women in my neighborhood writes a column for the paper here, she says there is not enough room to list all the crime in the newspaper--it just doesn't get published...

Still we have to move towards real progress, right now we are just treading water and "sweeping the dust under the rug", a day of reckoning will come, indeed, I see it as already being here, just still ignored.

Multi-million dollar housing erupts around me; yet, when I take a weekend bike ride I pass people with children living under bridges!

I have older friends once active and engaged in important industries now working at or near minimum wage. Sometimes they are forced to decide if it will be clothing, food or medicine that month. I am putting two sons through college (barely!!), I am so strapped I can't help anyone! I just wonder where my kids will work once they get a degree--McDonalds? My friends are all getting older with a lot less "clout" in industry... my oldest son is running his own business and has climbed into the black with profits--I want to quit and go to work for him! <grin>

There is a tremendous void between the very rich and very poor, a chasm
which widens daily. I "dress down" in some parts of the city
here, not wanting to look like a "wallet walking down the street!"
Already, me--myself, I am not so anxious to ask for a raise--those with
degrees more current than mine are knocking at the doors of industry--with
a hungry look... they will take my job at maybe 1/3 or 1/4 of my
salary--how secure should I feel? Probably if I didn't have seniority and
friends close I might be gone! Many under me are jealous, and I don't
trust in their loyalty or high moral standards, and they are younger...
luckily I have an excellent work relationship with my boss, but I don't
think her that secure in the corp., she shares many of my same worries.

I think other "old guys" like me may feel this pressure? I am there in
spirit with you brother, you are NOT alone!

I am not a "defeatist" in my attitude, but darn man, time to do something!

(knock-on-wood)

Hello, Dee

Liberal? Pushing for more money for power companies? Please forgive my
ignorance, but if I follow the money trail, it leads to big business
(monopolies, at that).

Hello, Jim

Well, by limited interference, I am suggesting that BPL be limited as any other unintentional radiator. I do hear your point and it is well taken. We do *not* need "only" a 10 dB increase in noise in general LOL

Also, as we are well aware, no filter is perfect, whether a notch filter or a bandpass filter or any other filter. Also, filters introduce distortion into the signal. So, it remains to be seen if the power companies can come up with a BPL with very limited impact on licensed services. I do have my doubts, but am only suggesting that *if* they can prove a system can produce very low noise in the airwaves, then it might be worth a try. That is a *big* if.

Dannie boy, you didn't see the big brouhaha in here on Brian
making a single comment about doing amateur ops from Somalia
and ALL the resident PCTAs in here jumping on his case? All
of those PCTA extras were ready to give Brian a necktie party
for that "offense" which all of them ruled on...

>Under my German Amateur Radio License I had FULL Privlidges any German
>National had. That included VHF on 2m FM withing the confines of the
>Federal Republic of Germany.

So...how do you relate that to the UCMJ that required you to
abide by Army regulations? Remember that you described using
your amateur HT "while standing on a command track." That
indicates you were in the field, on a field exercise for the
United States Army. United States of America. NOT the

Federal Republic of Germany ("west Germany" in 1972).

To whom did you owe the greater loyalty to? Ham radio? The
FRG? Or to the United States of America?

>> Was this ham HT purchased by yourself or was it given to you

Dee:

We do have sick leave, one day a month (with a doctors note your boss/super can approve more), you can accumulate up to 12 and no more, it is generally expected you will take them, many use them to "tack on" another week to their vacation.

Rather than "abuse" it is generally viewed as a "perk" or "benefit", it is not the same at your work? I have talked to state and federal workers here, it is generally the same for them... perhaps that is only california?

On 17 Aug 2005 09:55:16 -0700 N2EY@aol.com wrote:

| The "notching" solution is simple: Their BPL system does not use
| frequencies that are also ham bands. Whether it works or not is an open
| question.

What about MARS and SWL frequencies?

| - BPL is a "last mile" delivery method, not a complete system. Still
| needs a 'head end'

I've seen pictures of these units on primary (12 kV) lines, so by
"last mile" this must mean more than just the drop into the home.

| - BPL bandwidth is shared between users on the same line, so as your
| neighbors sign up and use the system, your performance degrades.

On what line? The primary (12 kV) or the secondary (120/240 V)?

| - There are other technologies (like Wi-Fi) which can do the same job
| without all the fuss and bother.

These are on 12cm and 5cm from what I have heard.

| - The big danger of BPL is that it turns the whole idea of spectrum
| protection and allocation upside-down, and sets a bad precedent.

It can also be susceptible to ham transmissions, which will unfairly blame
the ham radio operator as the cause of networking failures.

Is that how it was done in the former Yugoslavia?

Since the Clinton model of modern warfare and nation building is
perfect, shouldn't we follow it?

And lessee...

The 13 Colonies had independence in 1776. The 13 Colonies ratify a
Constitution in 1787 (1787 - 1776 = 11 years). Why must there be a
constitutional government in Iraq this week? Shouldn't Irag be allowed
the necessary amount of time to get it right?

|
| Actually this would be more of a liberal idea. It surprises me that a
| Republican administration would buy into this.

Bush has many friends who are energy company executives, board members,
and investors. He's doing his friends a favor by supporting their bad
ideas, even though in the long term, BPL is doomed to flop because it
simply cannot keep up with the coming fiber technology, or even match
what some DSL and cable/coaxial deployments are already doing.

BPL is a _waste_ of power company investment dollars, which will be
diverted away from crucially needed infrastructure updates to become
capable of handling new energy needs of the future, and to be secure
against terrorist attacks. BPL actually puts the nation at more risk
than it has now.

If power companies want to play "me too" in the information services
game, then what they should do is just trump everyone else by rolling
out fiber now in the right-of-ways they already have. They could kill
the rest of the market by deploying a gigabit fiber infrastructure.
Even Verizon's fiber offering wouldn't be close.

Dee, you do make a good point. Seriously. However, at Kodak, I heard from a reliable source that one gal (a member of a minority group) had used up her short term diability (26 weeks). Mostly sick on Fridays and Mondays. Amazingly, they "recharged" her sick leave and she wasn't let go. The rule was that once you exhausted your sick leave (short term disability), you were terminated.

Meanwhile, a supervisor in our group had a husband who had open heart surgery. He was also an employee at the big yellow box. They wouldn't even give him time to consider how to take his pension. He was gone.

I don't know the proper answer, but at the place I'm going, they don't pay for the 1st week (at any one time). Then they pay 60% of your check.

This may put a hurt on honest folks, but it does protect one if you are hurt in an accident and does protect the company from folks that just want to have extra "vacation".

I can see your point about folks who are sick that come to work anyways, but how does one balance the whole thing? My guess is not pay for the first two days and then pay at 60%. That might be one answer.

I can. More competently and with greater comprehension than you,
no doubt.

> "not lying making a play on letters"
>
> I am not lying I am as I have said severl times now making a joke

It was a joke the first time. (Not really...It was you screwing
up again, but for the sake of argument we'll LET you call it a
"joke"...Even though we know it isn't...)

> a joke of a type you feel no need to apologize for when you do it

You mean like when I typed "KB9EQZ" instead of "RQZ"...?!?!?

Unlike you, I immediately acknowledged my typo.

Since it WASN'T your callsign I wrote and no one presently holds
KB9EQZ, there's no one to "apologize" to.

The FIRST time was a "joke"...(yeah...sure...uh huh...more like
your billionth typo)

When it was pointed out to you and you perpetuated the error
despite having had it pointed out to you, it became a lie.

More than your billionth.
```

... I don't think that is anything more than a myth you are beginning,
perhaps you picked up that myth from some other place?

Fiber lines are owned by a specific entity, power lines can be leased for
such use by anyone... the costs are going to be very much different
between the two...

Source record: 116649

If you are running windows, and need to use a free news server with outlook...

1) Open Internet Explorer

2) Enter: news://excelonline.com into the ADDRESS bar and hit enter

3) Outlook express should open up and begin a dialog to get you signed up

... even if you use another news server you can use this one to create another identity.

... if you want to examine other free news servers, use "maxbaud" and "news servers" in google, make sure you pick one which allows posting, otherwise you will only be able to read posts...

Not the point. He made similarites between geonocide in Bosnia and WMD in Iraq. The former was true, the latter was false.

As to your point, Bush did not say we were going in to stop the genocide in Iraq. If he truly cared about such a topic he would have made it a priority when he got into office. He didn't. So the Bush apologists have to defend the war some way by saying how were stopping some genocidial maniac. Though he was one, it was only a reason given since the real reasons we went there have turned out to be false.

Liberal because it is being pushed as every having a "right" to broadband.
Yes follow the money and it leads to as many liberal business men as it does
```

conservative ones.

Normally I would have not commented except for the fact that he has also made the point several times that he is deliberately choosing not to in order to spite people. Even with Google, one could compose in a word processor and then cut and paste. Or a person could at least read through it a couple of times before hitting send.

However, it doesn't particularly bother me as I exercise my option not to read the garbled ones. If he wishes to waste his time writing stuff that people won't read, that's his prerogative.

It will also be susceptible to interference from natural sources such as
lightning and other manmade sources such as occur with many electrical
devices. It would be quite easy to have a case where the computer power
supply, computer monitor, television, fluorescent lights, etc could cause a
degradation of the service.

I don't hear that in the article at all. What *is* mentioned is
the idea that the town needs it for their economy.

> Yes follow the money and it leads to as many liberal business
> men as it does conservative ones.

Sorry, Dee, I don't see that at all.

BPL is basically bad science and bad engineering,
pushed by the promise of being a quick "high-tech"
fix. Fits right in with the current administration's
attitude towards science and technology.

The pollution angle alone shows it to be a bad idea.

She must have known where the skeletons were buried. At our company, they'd
have picked up the pattern real fast and she'd have been out before she got
to 26. The industry is too tight and competitive to carry dead wood like
this.

We get long term disability for a year after the short term so at least I
was in good shape then. Once you go on the long term though, you are not
guaranteed the same position when you return. It may be quite a different
position.

It "won't do it?!?" Oh, my, but you've been saying it WOULD!

Okay, the ARRL has been in existance since 1914 and they've
been a PUBLISHING BUSINESS as well since the mid-1920s. So,
the ARRL has had a bit over 80 years to publish its little
maxims (pun not quite intended) for all "good" hams to follow
for four generations now.

Note that INCOME from the publishing business supports more of
the ARRL activities than any amount of "membership dues" can
do. A few years ago the ARRL declared on their federal income
tax forms that their total income was $12.5 MILLION that year.
Note also that legal representation is NOT inexpensive...Chris
Imlay's law firm going to do all its ARRL legal work pro bono?
[inconceivable in American law practice! :-) ]

Do the math. The League would have to get EVERY licensed U.S.
radio amateur to join up at the current dues rates in order to
come CLOSE to that sort of income. All those ARRL Life Members
paid a one-shot fee and are no longer required to pay anything
more so their dues won't show up on the annual League budget
now.

Can ANY *new* amateur radio membership organization come close
to the ARRL's penetration of U.S. ham radio? Not at the grass-
roots level, not after the League has had an existance of four
generations just as a publishing business (91 years as an
incorporated membership entity). This *new* membership
organization MUST have some significant monetary support at

the START in order to survive. That's very, very difficult today. There have been several tries in the past three decades (give or take) and none have been successful in coming close to the League establishment.

Can one join the League and "effect change from within" (that's your repeated mantra stated several times before) ? I doubt that from the simple reason of reading all those ARRL BoD minutes, seeing all those same names showing up for so many years. The public does NOT see EVERYTHING going on in Newington nor at those aperiodic gatherings of wheeler-dealer junkets at various cities. What we do see are nice, formal gatherings of Good Old Boys discussing very, very little new that will affect a majority of American radio amateurs (remember that the ARRL says it "represents all amateurs"...ahem, koff koff).

ARRL membership figures show that only one out of five U.S. radio amateurs are members. 20%. They've almost had 25% at one point in their 91 years. The League keeps asking for more money...such as the "Spectrum Defense Fund." Ahem, it didn't get a whole BAND at 60 meters, did it? Guess they "didn't SPEND enough" lobbying for one? The IARU managed to press home a sort-of future solution for 40 meters that has been lingering since WARC-79 (that's now shown up in the Federal Register as the big WRC-03 Omnibus action that is an Order). The League keeps supporting all those olde-tymers of their core membership...the Lifers, the Belivers...and ignores the 48% of all U.S. amateur licensees who are Technician class.

Of course, you will trumpet "join the League, start changing from the 'inside'"...which means PAYING to get in...which means all joiners will be on Address Lists they can sell for more INCOME. Lovely legal scam-equiivalent. <shrug>

No problem, Dee. You aren't reading this anyway. Others do. Others have already known about it for years. That may be one reason the membership doesn't reflect a greater percentage of the total licensees...

now pay

I'm not "poor," little Stebie, rather reasonably well-off,
NO liens at all, wife and I just bought a new car, we both
have income other than Social Security. We own two houses,
one in Los Angeles, the other in Kitsap County, WA...no
mortgages on either.

> Can't stand it that there ARE other avenues "where ideas for
>change, restructuring and progress" may be "introduced".

Incorrect. There are MANY avenues for change, restructuring
and progress. For civilian radio there is ONLY ONE and that
ONE is the Federal Communications Commission for U.S.
citizens.

In recent amateur radio history, FCC 99-412 was the Report
and Order that ordered the latest "Restructuring" of U.S.
amateur radio regulations. That was commented on by over
2300 documents from citizens under WT Docket 98-143. More
recent were the EIGHTEEN Petitions for Rulemaking, some of
which were DENIED in FCC 05-143 and the International Morse
Code test element 1 elimination being THE singular topic of
WT Docket 05-235. As of midnight EDT 16 August 2005 there
were no less than 1646 documents filed in WT Docket 05-235.

Amateur radio regulations were NOT a topic of discussions
at a neighborhood meeting of our City Councilwoman two
weeks ago at the All-Saints Church parish hall. They
won't be at Congressman Brad Sherman's Town Meeting next
week in Northridge, CA. Do you think amateur radio regs
SHOULD be discussed there? If so, state WHY.

> Means he can't remind us of how impotent he is.

BWAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!

Not to worry, LITTLE Stebie, in a real discussion of real issues affecting the community, I can "get it up" (so to speak) on DISCUSSIONS with relevant facts and figures to support my views. I'm used to it, can do it effectively.

One thing I do NOT do is - like your sexual innuendo misdirection - try to divert the discussion into some mean-spirited self-frustrated ATTACK on other personalities. While that serves to temporarily HIDE YOU on your lack of facts and logic on the SUBJECT under discussion, it is by no means any sort of positive attribute for yourself. It is rather a negative attribute that shows how shallow and ignorant you are with all that emotional instability of hatred manifesting itself at every opportunity.

No kidding?!? From whom did you pick up that factoid? :-)

>> They're lossy at HF because they radiate! The whole concept
>> is deeply flawed. By allowing BPL systems, FCC is setting
>> a very bad precedent by saying it's OK to pollute the electro
>> magnetic spectrum with noise, even if there are viable
>> alternatives to the noise-producing technology.

A couple of points here: First, the FCC does NOT "allow"
Access BPL existance. Access BPL systems are (note
carefully) UNINTENTIONAL Radiators.

Secondly, the FCC has never ever established any "radio
service" about or for any Broadband Over Power Lines
concept. BPL is a WIRED system; i.e., NOT an intentional
radiator of RF.

Thirdly, the FCC DOES CONTROL RADIATED RF LEVELS AND TO
ESTABLISHED SPECIFICATIONS NOW IN TITLE 47 C.F.R. That
radiation level HAS been quantified and put into an Order
that did appear both in the Federal Register and at the
FCC website under the Office of Engineering Technology
link. It wasn't under the Wireless Telecommunications
Bureau page nor the Amateur radio page under that (there
hasn't been any new link on the amateur page there since
2002).

The NOI (Notice Of Inquiry) of the FCC that caused this
recent flap and furor was NOT about the existance of BPL
as any service...IT WAS ABOUT MEASUREMENT METHODS TO
DETERMINE ACCEPTIBLE WAYS TO MEASURE THE RADIATION.

The OET knew damn well that BPL would radiate. But, they
could NOT LEGALLY STOP BPL from existing. All they could
do is establish a legally-acceptible MEANS OF MEASURING
THAT EXPECTED RADIATION.

>Well, by limited interference, I am suggesting that BPL be limited as any
>other unintentional radiator.

It IS. One has to scrounge around the FCC webiste a bit to
find it, but it IS there.

> I do hear your point and it is well taken.
>We do *not* need "only" a 10 dB increase in noise in general LOL

Nobody does, but it has happened. Listen to the "ISM" bands
and the DSSS and stuff there does raise the noise floor.
However, the occupancy of those ISM bands is nearly ALL that
mode and those users coexist peacefully.

>Also, as we are well aware, no filter is perfect, whether a notch filter or
>a bandpass filter or any other filter. Also, filters introduce distortion
>into the signal.

Irrelevant. Those "notch filters" can't erase MOST of the
frequencies on HF. The "licensed users" and the UNLICENSED
listeners are spread over most of the HF spectrum.

> So, it remains to be seen if the power companies can come
>up with a BPL with very limited impact on licensed services. I do have my
>doubts, but am only suggesting that *if* they can prove a system can produce
>very low noise in the airwaves, then it might be worth a try. That is a
>*big* if.

Many, many things ARE possible. The last 109 years of the total
existance of radio have shown that.

However, TRANSMISSION LINES of signals are technology that goes
back BEFORE the "birth" of radio in 1896. Lee de Forrest, the
inventor of the three-element vacuum tube, was studying
transmission lines academically before his "audion" experiments.
As far as our present-day technology knows (and that is
considerable), transmission lines with lots of discontinuities
will radiate; the TEM field won't be nicely contained. Given
that the ordinary 60 Hz power distribution lines are chock full
of discontinuities and changes in conductor size and spacing
(thus a change in characteristic impedance where that step is a
discontinuity), those power transmission lines WILL RADIATE RF.
That is inevitable.

IF and ONLY IF the electric power distribution system was
designed and REBUILT to known transmission line standards at
HF-VHF could such a wired BPL system be tried out for minimum
interference.

was not

Your analogy is broken, Jim.

The newcomers microphone is analogous to Marks computer keyboard, which works
just fine.

As you well know (unless you just fell off the turnip truck) the reason for
Marks difficult-(sometimes impossible)-to-read posts is a medical condition.
Give your newcomer a medical problem (speech impediment?) and rewrite the story.
Then we'll answer your question "How should the group respond?"

Not at all, Hans.

You snipped off the rest of the analogy, in which
it is revealed that although there is a way to
fix or at least improve the situation, the
newcomer refuses to do anyhting about it.

That's the central issue: the *refusal* to use
an available tool to fix or at least improve
a problem.
>

Allegedly.

Mark has claimed a lot of things in the past that simply did not add up. Like claims of a 248 IQ...

Perhaps his condition is real, perhaps it isn't. That's not the issue at all - the issue is what he does about it.

He says the use of a spellchecker would slow him down too much and that we're not worth the effort.

> Give your newcomer a medical problem
> (speech impediment?) and rewrite the story.

How about a person with a speech problem who refuses to go to speech therapy, even though the cost is low and improvement is clearly possible?

> Then we'll answer your question
> "How should the group respond?"

Who is "we"?

Only 50/50. Not bad percentage.

Of course my percentages soar when scoring my hits against your
stories and fantasies, Brain.

Ya can't win 'em all!

I'm not a ham, nor do I use a cb.
Now, right now, is when I'm deciding not to get involved with radio at
all. If this is the "community" my friend keeps talking about, well,
I'm just going to stick to computers.

Such as?

True, I won't discuss my seervice in the Corps, however they pale
against such heroics as illegally operating from Somalia and such
outrageous stories as the ones you've cooked up vis-a-vis ARES, MARS
(mostly trying to diss me on it), emergtency comms planning, etc, etc
etc.
>
> > > > Hey, I do it myself.

What lies, Brain?

You keep making these insinuations about all of these "lies" (the infamous '29') but you never detail them or substantiate them.

> > > Thankfully it's not been a contiguous seven years. Markie was

Your "incorrect" is untrue.

That there are discussions in THIS forum for those very issues
disproves your assertion.

SNIP

> Amateur radio regulations were NOT a topic of discussions
> at a neighborhood meeting of our City Councilwoman two

> weeks ago at the All-Saints Church parish hall.

Why shoud they be? Why COULDN'T they be?

But does that make "untrue" my claim that there ARE other avenues
for change of Amateur regulations?

That it eventually winds up in the FCC's lap is a certainty, but
is it your contention that the FCC's NPRM/R&O is the ONLY forum for
those changes?

> They won't be at Congressman Brad Sherman's Town Meeting next
> week in Northridge, CA. Do you think amateur radio regs
> SHOULD be discussed there? If so, state WHY.

Why not?

Is Congressman Sherman NOT elected for the purpose of representing
your issues and concerns to the government? Is there some list of
topics somewhere that says you can't discuss federal regulations with
your elected representitive in a public forum?

We have exactly that case locally. And I've already described how the group responds and how the individual deals with the problem. It's a two way street. The individual is responsible for taking the steps necessary to minimize the problem and the group accepts that.

THE SHITCAN MAN
With apologies to "Willy Wonka and the Chocolate Factory"
- as recorded by Sammy Davis Jr. with the Mike Curb Congregation

Who can take a Wiseman, sprinkle him with Joo
Cover him with shame and a Yiddish name or two
The ShitCan Man, oh the ShitCan Man can do
The ShitCan Man can 'cause he mixes it with truth and makes the world take note

Who can take a gay lame, wrap it in a sigh
Soak it in the sun and make a groovy Wiseman pie
The ShitCan Man, the ShitCan Man can
The ShitCan Man can 'cause he mixes it with truth and makes the world take note

The ShitCan Man makes every post he moves go away to shit can limbo
Now you talk about your childhood wishes, Woger's living with the bitches

Oh, who can take NIM Busters, dip it in a dream
Separate the trash and collect up all the cream
The ShitCan Man, oh the ShitCan Man can
The ShitCan Man can 'cause he tends to it with care and makes the board look good

The ShitCan Man makes every post he moves go away to shit can limbo
Talk about your childhood wishes, Woger's living with the bitches

Yeah, yeah, yeah
Who can take NIM Busters, dip it in a dream

Lardass, poor Lardass aka "Digital". He cringes every time the "40 Year Old Virgin" movie is mentioned, especially when he knows they used him as an example of one of these kinds of people. The kind that play with Daleks and never get lucky.

> He doesn't recall the day, but his Bar Fly mom said that when she brought

Why would he, his mom weasn't a bar fly, nor did his daddy really want a puppy. Sounds like you are jealous because Roger was wanted unlike you. However, "Digital"'s Mommy wasn't sure which "John" (and that isn't his first name) fertilized her egg for that $2........

> <sound of a door slamming>

"Digital" has familiarity with hearing doors slamming, especially right after he was kicked out of his rented duplex (he stayed in the basement) and when he tried to beg to come back home.

Most of what currently fills this newsgroup up is the work of a small group of psychopaths who for some strange reason enjoy insulting one another in a public forum (I suppose that way they have an audience as opposed to taking it to email). They do not accurately represent the 'average ham' in any way, shape, or form. While you will find a few nuts on the bands (e.g., jammers who do not identify themselves) the vast majority are friendly folks who love radio, comply with Part 97, and love a good ragchew.

I highly recommend you ignore the childish ad-hominem attacks in these groups. Most newsreaders have filtering capabilities. Use them.

Message-ID: <Ie0Ne.37133$084.32934@attbi_s22>
Source record: 116489

I just passed all exams (up through Extra) this past weekend, and my paperwork was submitted to the FCC. After checking the FCC database, I see that I have been issued a Technician license and callsign. I'm surprised it was issued so quickly, but more surprised that a Tech license/call was issued instead of Amateur Extra.

Should I call the FCC # on the CSCE form or wait a few days and see if it gets "fixed" in the database?

It's not likely to get fixed by itself. It could be an error at either the
FCC or the VEC. Call both.

KY4Z that mighty Murine has promised action that would do than anoy me.
He promised that days

what has he deliveried.

Nada.

of course This is hardly Stevie's fault, nothing is Stevie fault
accoding to him, but in this case he realy does have an excuse, the
powers that be don't take Usenet very seriously, as I could not get
much action out of Stevie death threats, Stevie has failed to achhieve
his results.

I did think he manage to spin together enough Bullshit to cause a some
socail worker drop by, it isn't too hard to get such action, but it
seems that stevie mentioned the word "gay", or made a reffernece to my
religion, or something that got him written off as a crank

But how long will that last? Here in Israel we call it the "boiled lobster"
effect. A live lobster placed in a pot of cold water is happy. As the
water gets hotter it falls asleep. It never realizes it's being cooked.

This what will happen with BPL. By the time you realize that it's taken
over the ham bands, it will be too late. That's why I'm boycotting
Google, they with two other companies invested $100,000,000 in BPL.

Geoff.

membership in the sates was a few thousand(Bill, or Carl any numbers)
was more or less organized here on RRAP, much smaller than the ARRL

Indeed NCI makes a good case that any wel organized group with a clear
and convincing idea can effect change, and with far smaller numbers
than ARRL

# 2307. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-18 18:52:00 UTC
From: LenAnderson@ieee.org
Message-ID: <1124391119.936926.245060@z14g2000cwz.googlegroups.com>
Source record: 116759

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of midnight, EDT, 17 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1677

Indeterminate/duplicates (note 1) 75

Unambiguously Against NPRM (note 2) 448 27.97%
Unambiguously For NPRM (note 3) 926 57.80%
Code test ONLY for Extras (note 4) 228 14.23%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 17 Aug 05 that would be 1602.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

not yes

>>
>> Incorrect. There are MANY avenues for change, restructuring

>> and progress. For civilian radio there is ONLY ONE and that
>> ONE is the Federal Communications Commission for U.S.
>> citizens.
>
> Your "incorrect" is untrue.

The Communications Act of 1934 as amended by the Telecommunications Act of 1996 is LAW and establishes the Federal Communications Commission as the ONLY civil radio regulating agency in the United States of America. What I wrote is TRUE.

> That there are discussions in THIS forum for those very issues
>disproves your assertion.

NOTHING in this forum carries any weight of LAW. Try to keep a sense of reality however unstable that seems to YOU.

The LAW of the United States of America is established. It is ALSO law that the same Constitution that established the laws of this nation carries with it the mechanism for changing those laws at the will of the people of the United States of America.

> But does that make "untrue" my claim that there ARE other avenues
>for change of Amateur regulations?

The ONLY OTHER "avenues for change" are revolt, insurrection, and an overthrow of the government of the United States of America. Are you advocating such revolt, insurrection, and overthrow of the government of the United States of America?

> That it eventually winds up in the FCC's lap is a certainty, but
>is it your contention that the FCC's NPRM/R&O is the ONLY forum for
>those changes?

In regards to a change of regulations as ordered by the Federal Communications Commission under a Notice of Proposed Rulemaking of that very same Federal Communications Commission, YES.

If you would take the time to read Parts 0 and 1 of Title 47, Code of Federal Regulations, you would understand the organization and the methods of change of regulations that makes it possible and lawful to effect a change in those same regulations.

>> They won't be at Congressman Brad Sherman's Town Meeting next
>> week in Northridge, CA. Do you think amateur radio regs
>> SHOULD be discussed there? If so, state WHY.
>
> Why not?

You did not state any "why."

> Is Congressman Sherman NOT elected for the purpose of representing
>your issues and concerns to the government? Is there some list of
>topics somewhere that says you can't discuss federal regulations with
>your elected representitive in a public forum?

Sigh...one has to repeat very basic Civics to those who only
wish to argue...

Hello? The Communications Act of 1934 was passed by the Congress
of the United States of America. That Congress is composed of
two "houses," the Senate and the House of Representatives. A
Congressman is a member of the House of Representatives. That
Communications Act of 1934 (and as amended by the
Telecommunications Act of 1996) made the Federal Communications
Commission an independent federal agency with the capability
to establish rules and regulations pertaining to all civil
radio and certain other communications means...and to have them
enforced by the federal government. The Congress of the United
States does NOT NORMALLY micro-manage the duties it granted to
the Federal Communications Commission by the Laws it passed to
create that Commission and that Commission's sphere of authority.

Try, TRY to understand that NPRM 05-143 and WT Docket 05-235
is NOT a concern for the general public nor is it a topic for
banner headlines in major newspapers. Yes, it could be, but
then amateur radio is NOT a major public topic for citizens
such as the "deregulation" of the telephone infrastructure
that began about four decades ago.

TRY to understand that a Notice of Proposed Rulemaking put
forth by the Federal Communications Commission is FOR such
rulemaking as established by the same Federal Communications
Commission. The mechanism of such changes has been established
by law of the United States of America through the Congress of
the United States. Congress has, through a law, granted the
Federal Communications Commission certain powers of regulation
of civil radio services in the United States. Congress did
NOT grant any such powers to the ARRL or any other private
organization nor did the Telecommunications Act of 1996 grant
any powers to Internet discussion groups to change any Law.

The Federal Communications Commission has created, by
regulation, the mechanism by which the citizens of the
United States of America may discuss, seek changes to,
amend, or propose regulations established by the Federal
Communications Commission. That same Commission also
has established the report of any Report and Order which
formally establishes any change in its own regulations.

Tsk, little Stebie trying to sound like Tom Paine and winding
up a Paine in the ass...

> That you can "baffle 'em with BS" doesn't make it true...It just
>means you baffle well.

I understand the LAW of the United States of America enough
to work within it, using those means lawfully available to
me to support or seek changes to laws of the United States
of America. That is NOT any sort of "bafflement" and
certainly no "lie." The basics of that are guaranteed by
the Constitution of the United States of America and
maintained by the Congress of the United States, overseen
by the Supreme Court of the United States.

>> One thing I do NOT do is - like your sexual innuendo

> THAT'S ONE OF YOUR MOST OUTRAGEOUS, ABSOLUTLEY IDIOTIC AND
>TRANSPARENT LIES >>>E V E R<<< LENNIE ! ! ! ! ! ! ! ! ! ! ! ! ! ! ! ! !
>! ! ! ! ! ! !

This thread began on "issues" of concern over the policies
in regard to amateur radio. As usual, little Stebie has
turned it into his own "battleground" wherein he is only
concerned with his hatred and frustrations against his
"opponents" on anything.

>> While that serves to temporarily HIDE YOU on your lack of
>> facts and logic on the SUBJECT under discussion, it is by
>> no means any sort of positive attribute for yourself.
>
> READ WHAT YOU JUST WROTE THEN TRY TO LIVE IT, LENNIE ! ! ! ! ! !

You have been reminded of the structure of laws of the
United States of America. That may be reviewed by yourself
from documents established by the government of the United
States of America.

The common problem with the egocentric opinions of some,
such as evident of yourself, is that they cannot abide in
ANY opinion contrary to their own personal fanciful
interpretation. They, like yourself, become frustrated,
angry, and seek to denigrate, humiliate, and insult the

persons who do not agree with them. That is NOT debate, NOT discussion, NOT even any civil argument. It is simply the puerile schoolyard-bully tactics of the sociopath, the maladjusted, those frustrated by everyday life who take out their aggressions on others for purely personal reasons.

It is clearly evident to any reader of this newsgroup that YOU exist solely to heap abuse on all those you hate, all those who do not agree with you. The SUBJECT is just something you use as a springboard to begin more personal attacks on others. You cannot discuss anything civilly without launching into yet-another-attack on the persons who do not agree with you.

you hat

I'd call the VEC first since they are the ones who filed the
paperwork.

In the mean time, I assume they issued you a CSCE (Certificate of
Successful Completion of Examination) for all applicable elements. You
didn't mention the 5WPM code test but I assume when you said "all
exams" you meant that too.

If you didn't do the Morse part, Technician is all you will get
for now unless you pass Element 1 within 365 days of the CSCE date, or
unless the FCC rules on 05-235 to allow you to operate without it since
you passed the writtens.

As long as you have the CSCE showing successful completetion of
ALL elements for Extra, and the FCC has issued you a callsign, you can
legally operate with your Extra privileges using the Extra
"identifier", for example "KZ4ZZZ / AE" in Morse or teleprinter, and
"KZ4ZZZ Stroke Alpha Echo" on voice.

Congratulations!

73

Stevie I said I would addreess you correctly whan and if you agreed to
do that same

You don't like you know what to do

Own up to your mistakes and apologize for that

as I said before If KY4Z shows and askes I'll aplogize to him not to
you

meanwhile back the the Subject Stveie KY4Z

KY4Z that mighty Murine has promised action that would do than anoy me.

He promised that days

what has he deliveried.

Nada.

of course This is hardly Stevie's fault, nothing is Stevie fault
accoding to him, but in this case he realy does have an excuse, the
powers that be don't take Usenet very seriously, as I could not get
much action out of Stevie death threats, Stevie has failed to achhieve
his results.

I did think he manage to spin together enough Bullshit to cause a some
socail worker drop by, it isn't too hard to get such action, but it
seems that stevie mentioned the word "gay", or made a reffernece to my
religion, or something that got him written off as a crank

Thanks... I called the FCC and the paperwork was filed electronically. The
personal I spoke with at the FCC did mention a "modification" that she
though had to be filed after the original Tech application was submitted.
I'm not sure if this is the case, but I'm in process of contacting the VEC.

Yes, I passed elements 1, 2, 3 and 4 same day. Was hoping for a shorter
callsign since I'd like to do some QRP/CW work as my Morse skills progress
beyond 5wpm. Perhaps a new call will be issued with the license "upgrade",
or maybe I'll have to go the vanity call route. Remains to be seen. I knew I
could use the AE privileges with a Tech license (it was a question on the
exam) with a CSCE and proper ID... now I just need a transmitter.... heh.

> Congratulations!

Many thanks :)

I think that what may have happened is that since you're a totally new
licensee, they may have issued the Tech as the first action, then input
the
Extra as an upgrade (which FCC calls a modification). In that case,
the licenses could arrive days or even weeks apart.

Welcome to ham radio!

--

This raises a question about "new licenses" numbers. If in Design Guy's
case,
FCC first issued a Tech and then modified it to Extra, even though he
passed
all four elements at one go, the numbers may show his new license as
Tech
rather than Extra.

I wonder how many others who went straight to General or Extra have
been classified that way.

Heck, agreement was/is a condition of membership!

It's interesting that NCI was and is so secretive about its numbers. Last
I heard, it amounted to less than 7000 members worldwide.

--

I think that crediting NCI for the code test reduction/elimination is
a bit like crediting the rooster for the dawn. Look at the history:

1975: FCC first proposes a nocodetest ham license in USA.

1983: FCC again proposes nocodetest ham license in USA.

Early 1980s: FCC "waives" (eliminates) code sending test, allows multiple
choice and fill-in-the-blank code tests as well as 1-minute-solid-copy
test.

1990: FCC creates medical waivers at White House
request, to do a favor for a foreign head of state.

1991: FCC creates a nocodetest ham license in USA by simply
eliminating code test from Technician.

1996: NCI formed

2000: FCC reduces code testing to 5 wpm for all classes requiring
a code test despite majority of comments supporting 2 or 3
code test speeds. States that treaty requirement is only
reason 5 wpm was kept. Also reduces written testing.

2003: WRC-2003 eliminates treaty requirement for code test.

2005: FCC proposes complete elimination of code testing, as proposed
by several petitions.

The trend to nocodetest, and to less testing overall, was clear long
before NCI appeared on the scene.

They don't accurately represent the CBers either. I use both Ham and CB. One thing is for sure, No one is being attracted to either hobby by those actions. Pretty soon, people may also start turning away from the news groups as well - due to it. I know one ISP who refused to carry them - partially for just that reason. It is a shame.

Just me

> | needs a 'head end'
>
> I've seen pictures of these units on primary (12 kV) lines, so by
> "last mile" this must mean more than just the drop into the home.

What is typically done is that fiber or other highcapacity
communications is brought to a point (the injector) near a bunch of
customers. Then the signals are converted to the frequencies used by
the BPL system and put on the medium-voltage distribution line. (Note
that a distribution line and a transmission line are not the same thing
to powerco people).

At each stepdown (service) transformer, there's a coupler to take the
signals around it, because such transformers are very lossy at BPL
frequencies. They're
intentionally designed that way to keep noise and surges off the
service drops.

Which means that the couplers will bring HF noise and such into
customer's houses.

The distance from the injector to the customers served is typically
measured in hundreds or thousands of feet, not miles. The MV
distribution lines are not used forlong- or even medium-distance BPL
transmission - too lossy.

>
> On what line? The primary (12 kV) or the secondary (120/240 V)?

Both. Let's say you have an injector site that feeds a few thousand
feet of MV line, and there are a dozen or so transformers on that

line, each with its own coupler, and customers.

The available bandwidth is shared by all the customers on that
injector.
If there's (say) 5 mbd available from that injector and only one
customer
is active, s/he gets all 5 mbd - 100 times the speed of dialup! But if
there are 20 customers active, they all have to share, and may get only
250 kbd each. Which is only 5x the speed of dialup!

(Numbers are only for the purpose of illustration)

It's like the situation experienced by people with a DSL or cable modem
connection and multiple computers in the house all online at the same
time,
except that you have to share with the whole neighborhood, not just
Junior
upstairs gaming.

> the ham radio operator as the cause of networking failures.

Once word of that gets around, hams may be blamed even if they're *not*
the cause!

Ultimately the rise and fall of BPL will depend on whether it can
compete
in the marketplace with DSL, cable, and other methods. Hopefully it
cannot.

While hams, ARRL, IEEE and others were not able to completely stop BPL,
neither were BPL proponents able to get the rules changes they wanted,
either. And actions by groups like ARRL spread the word of the BPL
threat early on, rather than waiting until the systems gained a
foothold.

There have been several instances where test BPL systems were shut down
as being impractical. Some municipalities that were looking at BPL
eventually said "No thanks" due to the issues raised.

Meanwhile, the competing broadband solutions become more available
and more affordable.

"lurker???"

"honcho grande????"

"beavering?????"

Such kind words you choose to describe Carl.

Is the point. The former is true in both cases. If it was good enough
for one invasion, it's good enough for the other.

Except for "Here you guys sign up and get registered", that's not what
it was about at all.

What the 1912 act did was to organize what had been a haphazard system.
While the Titanic disaster gave them the impetus to act, the
legislation had been
developed and discussed for years before.

Amateurs (meaning stations that were not commercial, government or
maritime) were pushed to 200 meters and beyond, because those
wavelengths were
considered to be relatively useless by the professionals. Licenses were
made
mandatory to keep tabs on all transmitting stations.

But the "200 Meters And Down" spectrum was not limited to amateurs. Any
radio service could use it - all they needed was a station license. Few
except amateurs even tried.

Amateurs did not have free reign, either. Back then a station's
wavelength
was specified on the station license. If a ham wanted to try, say, 110
meters,
s/he needed a license specifying 110 meters.

That's just nonsense.

What happened was that the regulations evolved over time, driven by a
number of forces.

> This now lays at the extreme end where you must be careful what
> experiments you undertake, how you undertake them and why you can't

> undertake them...

How?

What experiments are you kept from undertaking, and by whom?

> in someways there are "guards" on the bands as exist in
> prisons, and you are "allowed out in the yard" if you obey all the
> rules...

FCC makes the rules. Are you advocating ignoring those rules?

> strange for a hobby first created as a means to try new ideas
> which could possibly lead somewhere...

So what's your proposal?

> BPL is perhaps a very good example, where arrl and other "status quo"

> able to change and redesign hardware/software to attempt to make it
> work! Cease and desist immediately, we so command you!"

The interference provided by BPL systems has been observed and
demonstrated.
It's a fact. One doesn't have to be a radio genius to see that power
lines
with HF on them will radiate like mad and interfere with licensed radio
stations.

Would you rather that nobody opposed BPL?

Did you also pass the code? If not, all that they will issue is a
Technician no matter how many writtens you've passed. If you did pass the
code, you should contact the VE team that administered the test and quite
possibly the VEC as someone did not enter it correctly. You should contact
them immediately. The FCC has no way to correct the situation until the VEC
submits the proper entry.

> Many thanks :)

Once they have issued the call sign, they won't change it as part of
correcting the database. You don't have to go the vanity route though.
Once the database is correct for license class, you can get a new Extra
class sequential callsign simply by submitting a request for a sequentially
issued call. However, it won't be much shorter than what you have now as
all that is available this way are the 2x2 calls beginning with A. If you
want a short call, you'll have to search for ones no longer used and submit

a vanity application.

It's not that common an error. I only know one person to whom that has happened. Normally they will issue a license at the highest level earned and issue the appropriate call sign. i.e. if you test all the way from nothing to Extra at one session, they issue an Extra class license from the get go.

N2EY:

I don't imagine any can argue amateur radio has "evolved", sometimes
faster, sometimes slower. Now is just another step in that evolution...

Amateur history can be read on the web, or a book from amazon, your local
library, etc, a few authors give a few different viewpoints also...

HH&E typed, "Hi! I don't think Iraq is going to be as democratic as we think it might be."

I consulted my crystal-ball, it just said, "... stay tuned ..."

I drug out the tea leaves, brewed a cup, examined the leavings, the cryptic message, "$ OIL!" seemed to be represented by the leaves--strange...

So I emailed Sylvia Browne, maybe she can shed some light on this mystery...

They can believe what they want, including that the moon is made of
green cheese, but if the operator is in compliance with the rules
there is no violation.

Mere holding of a ham license (or in specific cases, not holding a
ham license) does not make one an expert in interpretation of the
rules. I love to take on such "barracks lawyers"...like shooting
fish in a barrel.

Case closed. Next case.....

LLOYD'S A VIRGIN

(Madonna/Billy Steinberg and Tom Kelly/Les Paul)

LLoyd made it through 12th grade
Somehow he made it through
Never had a forum for his views
Until he found radio newsgroups

Lloyd is the the freak of the week
Everybody avoids that fatassed geek
But everyday's a brand new day
Yeah, it makes him feel
Shiny and new

Lloyd's a virgin
Hasn't had pussy for the very first time
Lloyd's a virgin
Never tires of jacking off all the time

"I'm gonna post about you, boy
My Bible's on my side"
Lloyd's been bashed around
Because his stupidity is hard to hide

He's bald, obese and round
A weeble-wobble that won't fall down
Oh, when he went to the retreat
Yeah, he stepped on his own feet
What a fucking fool

Lloyd's a virgin <GAY!>
Hasn't had pussy for the very first time
Lloyd's a virgin
Never tires of jacking off all the time

Oooh, oooh, oooh

He's bald, obese and round
He'll just follow you around
Because you make him feel
Yeah, you make him feel
He's got something to do

Lloyd's a virgin
Hasn't had pussy for the very first time
Lloyd's a virgin
Never tires of jacking off all the time

Lloyd's a virgin, ooh, ooh
He'd rather slurp nutsack goo
Lloyd's a virgin
What's a loser like him to do

Oh, oh, oh, oh, oh, oh, oh, oh, oh
Ooh, Lllllloyd
Can't you hire a whore
For the very first time?

Such discussion is futile unless the parties involved are educated
in the specifics of the field under discussion. I and a lot of my
counterparts have had to educate more than one elected/appointed
representative (local, state, Federal) about what professional and
proper radio regulation is all about to avoid them embarrasing
themselves in public.

Yes, I passed the code and all written exams (elements 1, 2, 3 and 4). I did
contact the VEC and he's on the case :)

I'll post any follow-up info I receive back under this thread.

Maybe you'll find the "Kruds" in the ARRL DXCC Countries List, Mr DXer.
Or maybe you won't. In any case, it doesn't excuse your ridiculing an

entire ethnic group in an attempt to bother me. You one helluva ambasador in the amateur community, Mr. A1 Op!

There is a lot of money to be made - even if it doesn't work very well.
Democrats have *not* cornered the market on bad ideas! 8^)

That is why I call it "faith based engineering". It *sounds* like a
great idea to use all those electrical lines to run the signals.

Reminds me of when I was a little kid, and though that we could fill
the cars gas tank by driving in reverse..... 8^)

I submit that there is no ethnic group called "kruds", despite Colonel Morgan's best efforts to introduce them. I find your indignity over a non-existent ethnic group to be very amusing.

How does one insult a group of non-existent people?

I'm afraid to say now. I wouldn't want to offend an entire ethnic
group. Perhaps they're nomadic!

I submit that there is no ethnic group called "kruds", despite Colonel
Morgan's best efforts to introduce them. I find your indignity over a
non-existent ethnic group to be very amusing.

How does one insult a group of non-existent people?

Dave K8MN
.....

Liberals are bred to be super sensitive to minority groups, whether real or
perceived. They learn at an early age how to wring their hands and take on
an air of condescending patience with us, the Great Unwashed.
They are, after all, in their minds, morally superior to the rest of us.

You're the logs, huh? Well, you looked pretty wooden-headed in your

I've seen no sign of an apology for your outright fabrications.

It requires an active imagination on the part of the offended. Are the
kruds from Alabamastan or Kentuckystan?

-=jd=-
--
Many kruds (note no use of caps) seem to hail from the costal regions. Many
live sheltered lives, work in academia or the media and are entirely
clueless. There is likewise quite a generous smattering of kruds in the
Democrat party.

We should initiate an effort to design an "adopt a krud" week. Ted "the
swimmer" Kennedy will most likely throw his considerable weight (no pun)
behind this effort. Toss in a case of Vodka and he will most likely try to
make a national holiday of it.

>
>Heck, agreement was/is a condition of membership!

Oh, my, watch out everyone, Jimmie is tossing them old
red herrings around again! :-)

>It's interesting that NCI was and is so secretive about its numbers.

Why? You sound worried.

Tsk, tsk, tsk, Jimmie, you were all a-twitter about that
back in the days of "No SSB International" and "Know
Code International"! :-)

I'm a member of NCI. Carl Stevenson is a mamber of NCI.
Bill Sohl is a member of NCI.

>Last I heard, it amounted to less than 7000 members worldwide.

You MIGHT try the entire International Amateur Radio Union
as far as no-code-test advocacy. Remember them? IARU?
ALL the REST of the amateur radio organizations in the
world?

Tsk, tsk, tsk, the IARU came out in favor of DROPPING the
morse code test about two years BEFORE WRC-03. Really!
It was on their website and everything!

Ya know what, yanno, S25 got REWRITTEN at WRC-03 and
S25.5 had the compulsory everybody-gotta test for morse
for privileges below 30 MHz licenses.

By the way, the membership of the ARRL is or rather was
149,583 as of 30 June 2005. Ya wanna know how easy it
was to find that out, yanno? NOT easy. The ONLY place
it was in was the "Publisher's Sworn Statement" under
the Advertising page of the QST page of the Services

page. The ARRL can't be up-front about it. Even so,
those "Publisher's Sworn Statement" numbers come out
only twice a year.

Based on www.hamdata.com statistics of a month ago
(18 July 2005), about as close to 30 June as anything,
the total INDIVIDUAL U.S. amateur radio licenses then
were 721,953 (731,543 with the 9,590 "club" licenses
added on). That means that only 20.72% of all U.S.
licensees are League members...roughly one out of five.

>--
>
>I think that crediting NCI for the code test reduction/elimination is
>a bit like crediting the rooster for the dawn. Look at the history:

Yawn, Jimmie crack corn and I don't care... :-)

Tsk, tsk, tsk...forgetting that the rest of the world
"didn't do anything" are you? :-)

>1990: FCC creates medical waivers at White House
> request, to do a favor for a foreign head of state.

Tsk, tsk, tsk...UNVERIFIED urban myth, Jimmie. You
FORGOT one very important little detail: The NPRM
on creation of the no-code-test Technician class was
released.

>1991: FCC creates a nocodetest ham license in USA by simply
> eliminating code test from Technician.

"Simply?" :-) It was called a REPORT and ORDER.

That no-code-test Technician class accounted for
about 200 K *new* amateur licensees in its 14 year
span...many, many more than any OTHER *new* class
licensees.

>1996: NCI formed

By Bruce Perens, a 20 WPM code-tested Extra.

Tsk, you really ought to credit "No SSB International"
and "Know Code International" for something, shouldn't
you? :-)

>2000: FCC reduces code testing to 5 wpm for all classes requiring
> a code test despite majority of comments supporting 2 or 3
> code test speeds. States that treaty requirement is only
> reason 5 wpm was kept. Also reduces written testing.

Oh, my, "the majority wanted lots of code testing"
urban myth surfaces again! Maybe you ought to look
at LeRoy (Larry) Klose III exhibits back in 1999

again? I have them. Need a copy because you can't
find them on the ECFS?

2001: The IARU comes out against compulsory amateur
radio code testing, wanting to rewrite S25 to make it
optional for any administration.

2002: The IWG 6 group handling amateur radio matters
for the WRC discusses the S25 revision and Carl
Stevenson, then-chief of NCI was present at those
discussions (plural, you can find the minutes on the
FCC website under International Bureau documents).

>2003: WRC-2003 eliminates treaty requirement for code test.

Tsk, tsk, TSK! You FORGOT the IARU input to WRC-03,
Jimmie. Best you read the FCC International Bureau
REPORT on WRC-03 again (if you ever did). The report
was written by the leader of the U.S. Administration
team that was there.

ALSO in that year marked the first of the 18 Petitions
for various "restructurings" of U.S. amateur regulations,
the majority of those Petitions favoring No Code Test
either entirely or in part.

2004: The rest of the 18 Petitions show up with the
VEC wanting NO CODE TEST whatsoever.

>2005: FCC proposes complete elimination of code testing, as proposed
> by several petitions.

...and you see "NO" influence of NCI at all, do you?
Tsk, tsk, tsk.

>The trend to nocodetest, and to less testing overall, was clear long
>before NCI appeared on the scene.

Yawn, yanno. What next? Dropping code testing was
controlled by the Trilateral Commission or the
Illuminati?!? :-)

>Compassionate No-Codism? I'm good with that.

Heh heh. Expect the ARRL to get in on the act, maybe the
"Pro-coder Compassion Supporter (or Truss?) Fund" or some
title like that...

On the ARRL's "poll" for 5 Aug 05 and an opinion on NPRM
05-143, of the 9,484 votes cast: 48.5% said it was a fine
idea, 47.1% sait it was a terrible idea, and 4.4% had no
particular opinion either way.

Nah...let's just pick up the 2x4s and beat them over the head
with the issue...just like they used to do it to no-coders
in the last 50 years or so. I think they deserve it... :-)

two for

Tsk, tsk, TSK! Every member of the United States military is
subject to the UNIFORM CODE OF MILITARY JUSTICE (UCMJ) anywhere
he or she is. The UCMJ >>OVERRIDES<< every other civil law
as long as they are IN the U.S. military.

That applied to YOU. That applied to Brian when he was in
active duty. That even applied to me long ago.

>> Dannie boy, you didn't see the big brouhaha in here on Brian

>under the Status of Forces agreement the US had with Germany at that time.

Sweetums, it doan matter when it comes to COMMUNICATING anything to M.I. and the JAG. COMMUNICATIONS by any means of sensitive/classified military information is an offense under the UCMJ.

>You are spinning off on a dead end tanget Lennie.

Not at all. When IN the U.S. military, all are under the UCMJ first...everything else is secondary.

>> To whom did you owe the greater loyalty to? Ham radio? The
>> FRG? Or to the United States of America?
>
>My loyalties have NOTHING WHATSOEVER to do with operating my ham radio
>anywhere or anytime.

So, as long as you are operating your ham radio, you HAVE NO LOYALTY to anyone? Tsk, tsk, tsk.

>Again Lennie, its a a dead end and I'm not falling for it.

No. The UCMJ is NOT a "dead end." It applied just before my Army service time began in 1952...it applied 20 years later when you were in your shack-onna-track...it applies TODAY to EVERY member of the United States military.

>Hey Lennie the loser....I'm shaking in my boots.

Call the VA's nearest medical facility to ease that trembling, Dan Disabled. They will fix you up.

>All you were was a broom pushing tube puller. That once
>in a while pushed a button or two.

Now, now, you are getting all ANGRY again. I was a "soldier first, signalman second." We were all reminded of that often...along with a yearly reading of the UCMJ (true).

Operations and Maintenance Supervisors of Microwave Radio Relay Systems facilities (MOS 281.6, the "0.6" denoting the supervisor part, E-5 or higher) did MORE than "push brooms and pull tubes." :-)

On the real side, none of us were too proud to refrain from such routine tasks when there was a need. Yes, we all "pulled tubes" on those 9 microwave radio relay terminals...they had over 250 vacuum tubes in each one and those didn't last forever.

There was NO "Fulda Gap" in Japan or Korea. Jimmie Noserve could have told you that; he is a renowned military expert for having read so much about it. Brain Kellie might have told you, too, but he is having some personal problems right now on spelling of others' names.

>Take your best shot idiot.

Not necessary. I qualified Expert on personal small arms shooting but I won't have to shoot anything. You've already shot yourself in the foot more than once. "No loyalty owed to anyone anywhere!" Tsk, tsk, tsk.

non loy

Davie will make fun of anything/anybody if he can make message
points. He does. Diplomacy was NOT one of his strong suites
in da "foreign service" and it sure as hell is MISSING in here.

But, a point in his favor: He knows Hunnish, speaks krud
and probably has his Capital One credit card all paid up...
he can go get new clothes to replace the barbarian costumes
he wears.

## 2378. Re: The Majority

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-19 10:42:29 UTC
From: N2EY@AOL.COM
Message-ID: <1124448149.452456.137190@g43g2000cwa.googlegroups.com>
Source record: 116679

Recently there have been some claims about "what the majority wants" in regards to FCC NPRMs.

Here's what happened wrt 98-143, the last big restructuring NPRM, and commenters' views on code testing.

http://groups-beta.google.com/group/rec.radio.amateur.policy/msg/bd661a50825a37f3?dmode=source&hl=en

http://tinyurl.com/7t3te

It was posted Mar 12 1999, by WA6VSE. Here's a relevant quote

BEGIN QUOTE:

Here's a summary of how the numbers came out ... more detail will be available from the NCI website soon ... special thanks to Larry Close

[Larry Klose, KC8EPO]

who put in a herculean effort to read EVERY record in the ECFS database and do a very comprehensive statistical analysis of the body of comment.

Code Exam Proposal Summary

Position Supported # %
No Code Comments 711 43% (favoring 5 wpm MAX or NO code test)
Pro-Code Comments 607 37% (status quo, including rants for faster code tests)
ARRL Comments 331 20% ("I support the ARRL proposal" or supporting 5/12/12)
---
TOTAL COMMENTS 1649 100%

END QUOTE

(the bit about "rants" is from the poster of the results, not KC8EPO)

Larry eliminated dupes and responses that did not address the code test issue.

It's clear that:

43% is not a majority, yet they got what they wanted.

57% of those who commented on 98-143 wanted 2 or 3 code test speeds. That majority did not get what they wanted.

57% of those who commented on 98-143 wanted 12, 13 or 20 wpm for Extra.
That majority did not get what they wanted.

57% of those who commented on 98-143 wanted 12 or 13 wpm for Advanced.
That majority did not get what they wanted.

80% of those who commented on 98-143 wanted 5 wpm for General
That majority did get what they wanted.

But only 43% of those who commented on 98-143 wanted 5 wpm or less code
testing. That's a minorty, but that's what FCC did.

57% is a clear majority, but FCC ignored it and went to 5 wpm for all
license classes requiring a code test.

If someone thinks 43% is a majority, they're either lying or they
don't understand what the words mean.

KY4Z, Stevie why don't you give up the lie that you have any real ability to harm me in the real world.

You promised Action action that would more than anoy me.

Where is it?

I see nothing Nada from your claimed "action"

You seem to be proven a braggard unable to deliver on his bold words.

A coward unable to admit his mistakes

Bully able to dish our abuse but unable to satnd it being returned in kind

Now where it seems

becuase of course there was nowhere to take it

What was Michigan going to do Arest me for Lying on your say so

Comit me to a mental ward on your say so

They have more folsk than they can keep now, and people that are realy
sick too

Not people suffering from the Illness of oposing the great Stevie

All Stevie can do is running around screaming He said a bad word

Grow up

Admit you can't deliver on your promises

That the world does not think that higher of an LPN as to take action
at every little whining LPN's furstartion

You called no doubt you in trying to pile up enough bullshit you showed
yourself to be the hate fill SoS we all know you are, and they wrote
you off

Exactly.

> Here in Israel we call it the "boiled lobster"

> water gets hotter it falls asleep. It never realizes it's being cooked.

There's a similar story on this side of the pond about a frog. Says
that
if you put a frog into hot water it will jump out, but if you put one
in
cool water and warm it up slowly, it will not.

Except that's not what happens at all - real frogs jump out when the
water gets hot enough.

www.snopes.com
>
> This what will happen with BPL. By the time you realize that it's taken

The ARRL and others have made a lot of noise about BPL, and they're not
letting up.

> That's why I'm boycotting
> Google, they with two other companies invested $100,000,000 in BPL.

Does boycotting Google help? I don't pay them any money.

in the Above Stevie claims that He may lie if someone else makes him

But he will not allow that after He goes on about being a Marine Sniper
and on about his kills and finishes off with "One Shot, One Kill, even
in Illopolis) I decided to lie about my rank to cause you some
confusion Until I could get back to protect my family

But here again we have Proof of Stevie Double standard

# 2404. AB5S WT 05-235 Comments to FCC

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-19 17:04:53 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <43061123.8020007@ix.netcom.com>
Source record: 116705

Comments submitted to the FCC,
advocating ARRL administration of
Morse license endorsment:
---

18 Aug. 2005
Re: WT Docket 05-235,
Amateur Radio Morse Code Testing Requirement.

I respectfully submit that we can relieve
the FCC of the burden and expense of administering
Amateur Radio Element One (Morse Code),
while preserving a skill which has both
a direct bearing on our nation's security
and a "global heritage" aspect.

We should maintain some level of incentive to
preserve and develop skill in Morse Code:

* Morse Code is still in use for covert
and intelligence operations throughout the world,
and will remain so for the foreseeable future.

* Morse code transmitters and receivers
are simple to make and operate,
needing only a handful of low-tech, inexpensive parts,
making them available even in less-developed
areas of the globe, where expensive and complicated
"hi-tech" systems are unavailable and, if present,
are subject to multiple failure modes.

* The only ready and sizable reservoir of trained
Morse operators is the Amateur Radio community.
If we remove any incentive to develop Morse skill,
this valuable asset will quickly cease to exist.

There is also a global historic and "Heritage of Humanity"
aspect to this issue. Morse Code has served as a
reliable means of communications for one and a half centuries.
It has been a primary tool in life-saving and part of
the great communication web that has knit us together,
first spanning neighborhoods, then continents, and
finally the world. As a tool in the evolution of
the global community, it ranks with the sailing ship,
steam ship, railroad and telephone. We preserve early
examples of these other means of connecting with

the larger world; Morse Code surely deserves at least
a modest effort at preservation, just as we preserve
these other "touch-stones" of our progress.
Without some form of incentive,
this important skill will be lost to us.

We can accomplish this while removing the burden
and expense from the FCC.
I respectfully suggest the following steps be adopted:

1. Drop the Element One (Morse Code) testing requirement
from Amateur Radio regulations. The FCC would
no longer be responsible for, or need to allocate
resources to, this task.

2. Reallocate the bottom 10 kiloHertz of each Amateur Radio
spectrum allocation to exclusive Morse Code use.
This is a small window, but is easily sufficient bandwidth
for skilled Morse operators.
It provides an "historic preserve," protected from
new and wider-bandwidth modes and will have
no impact on the development and use of new techniques.

3. Authorize the American Radio Relay League (ARRL) to
administer and issue, through the Volunteer Examiner
program, a license endorsement, attachable to any class
of Amateur Radio license, awarded for demonstration
of Morse skill at 5 WPM or better. Only those Amateur
operators with the endorsement could operate their stations
in the 10 kHz "historic preserves." The ARRL could
establish premiums for contesting and skill certifications
earned within the "preserves."
Continue to allow Morse Code use throughout
the remaining Amateur spectrum, subject to present rules
and/or future reallocations.

These modest steps will preserve this valuable and historic skill,
while removing the administrative burden from the FCC.
I respectfully submit them for your consideration.

Kind Regards,
David L. Stinson AB5S
Field Engineer
Wylie, Texas

Just why would there need to be a test in order to use this specturm
set aside

One can either USE Morse Code or not

But still the plea that Morse Code needs welfare in order to endure

Yes, just as the U.S.S. Constitution needs "welfare," and
the U.S.S. Arizona memorial, and the local steam train
preservation societies, and WWII Warbird museums,
and The Grand Canyon National Park, etc.
All important historical things need some assets to
preserve them. It's too bad that some people let
their personal bigotries and unwillingness to
work for a goal get in the way of good sense...
D.S.

Well if you think Morse Code needs this aid to suvive then it isn't the usefull mode that you describe

Morse Code either needs aid to survive or not If it needs such help to survive it isn't the usefull mode you describe

Your comments are better than most, but they still have this slipshod logic

Of course you come back with those that oppose you are lazy and unpatriotic

It is amazing that the blindness that results from not examing your beliefs

Walking was developed way before man ever thought of riding a horse,
camel, oxen, donkey, etc. Indeed, the automobile is only a very recent
development in mankinds' history, even predated by the bicycle...

Yet, few keep horses today as a reliable means of transportation...

Covert operations are mainly don't via the web...

But, nice bit of inaccurate obfuscation... CW will die with ancient
amateurs, however, there is always some faction which will use it, people
still ride oxen...

Band allocation should be allocated on long term statistics generated in
regards to the modes used... (past year or two)

As CW continues its' drop, it needs less and less allocations... as
no-coders now enter CW will have to shrink to accommodate the new users
and their modes...

And yet His comments are some of the best I have seen in defense of
Code testing

He addreses the reasoning to the Public Good tries to relive the FCC of
the Burdens involved

all in all a decent defense of the indefensable

AOF:

One thing for sure, this group sure has a lot which do not value
having anyone respecting their credibility... after a sufficient length
of time it becomes obvious, the vast amount dis-information which flows
off their keyboards... I think it is deeper than just them stating
falsehoods they know to be untrue, it really is a depiction of their
ignorance...

That is a very U.S.- centric comment.
Horses are still very much a "reliable means of transportation"
over a great deal of the world, as are oxen.
Your comments indicate you place no value on the
large segment of humanity that lacks your wealth.
There is no "web" in ItchyScratchyStan, nor
money for $250,000 portable sat downlinks
in other such places; if they have one, it stays
broken most of the time from one of dozens of
failure modes. But one can usually get
hold of a few parts to piece together a CW rig,
*if* they have been wise enough to encourage
the preservation of the skill.

The United States is not the whole world,
and it's past time we remembered that.

It's not a matter of them "wanting it;"
that is also a U.S.- and Western-centric attitude.
People do not generally choose to ride oxen,
have high infant mortality and suffer from disease.
They do so because they do not have access to the wealth
of the West. You indicate that you think everyone can
just run right down to Wal-Mart and buy a new cell phone
anytime they like. Since they don't have the wealth to do this,
should we discard them as human beings?
These people need to communicate
just as you do, and there will be need for intelligence
operations in these communities. Morse is simple,
reliable and- despite the protests of indolent
and spoiled rich Westerners- easy to learn.
My suggestion will preserve only a small cadre' of
operators, but that will be enough.
The scorned few have always carried the fire
for the lazy many.

D.S.

David:

Then your argument must be centered on such as:

. since parts of the world don't have out hospitals, we should abandon
them for simpler medical practices.

. americans need more rickshaws.

. we are going digital tv, we should abandon this, as it will be years or
decades before some of the world updates.

... get real ... no one should design the world on the least of available
technologies. Instead, at every turn of the road, the bar needs
raised--challenging those lagging to catch up...

Difficult, but not insurmountable. Remember, compassionate no-codism
serves both faith-based modes as well as all of the other modes.

Looks like a concensus. Those numbers were flipped when we were told
that we had to keep the code.

> Nah...let's just pick up the 2x4s and beat them over the head
> with the issue...just like they used to do it to no-coders
> in the last 50 years or so. I think they deserve it... :-)

Please, no.

Remember that compassionate no-codism is tolerant of faith-based modes.

In order to be fair and balanced, we looked at each side of the issue.
Unfortunately, the rationale does not go with the PCTAs.

I like this compassionate no-codism when applied to faith-based modes.

# 2428. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-19 22:01:46 UTC
From: LenAnderson@ieee.org
Message-ID: <1124488906.610729.303390@g47g2000cwa.googlegroups.com>
Source record: 116729

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of midnight, EDT, 18 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1720

Indeterminate/duplicates (note 1) 80

Unambiguously Against NPRM (note 2) 454 27.68%
Unambiguously For NPRM (note 3) 952 58.05%
Code test ONLY for Extras (note 4) 234 14.27%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 17 Aug 05 that would be 1640.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

not yet

[whut yu mean "we," white man?] [Tonto not hear dat...]

NCTA super-extras like Jimmie Noserve will come out with the
standard disclaimer that the website poll is "not scientific."

They are so forking predictable that one doesn't have to
think twice about what kind of rationalizations they write.

>> Nah...let's just pick up the 2x4s and beat them over the head
>> with the issue...just like they used to do it to no-coders
>> in the last 50 years or so. I think they deserve it... :-)
>
>Please, no.
>
>Remember that compassionate no-codism is tolerant of faith-based modes.

Geez...TUFF requirement! Not even a little 1x1 piece of oak?

Difficult. One SO wants to get a Hasty sling, a good sight
picture, BASS, and apply just a few ounces of pressure...

There's "compassion" on the prarie, the badlands, and the great
West for horses that can't make it. A gun or a knife solves
their problems, provides time-tested "compassion." So it is
with the coders. They can't make it without that TEST...so
we should "do the right thing" and end their suffering.

I'll have to consult with Pastor Midtlyng on that and get back
to you...

bye bye

"Stevie"

Nope...Took the blame myslef, Markie. Where'd you get that
"blames others" gig?

And why do you continue to lie about "KY4Z" being involved in this
forum?

Steve, K4YZ

HAM RADIO IN SPACE; AMATEURS INVITED TO LISTEN FOR MARS ROVER

Post-launch checkout of the Electra software-defined UHF radio aboard the Mars Reconnaissance Orbiter will be conducted on or about September 26th ad ham redio is invited to take part. That's because the tests will include CW transmissions during spacecraft turns to verify the UHF helix antenna pattern.

Interested radio amateurs and amateur and professional radio-astronomers in North America with sensitive receiving capabilities at 437.1 MHz can attempt to receive the UHF signal from MRO during this test. Please note that this is advance information and is subject to change. (ASR)

I actually agree with you on this one. Even today....well actually for
many years....the 80 meter band is a classic example of wasted space.
Mostly dead air in the "CW" allocations. In particular from 3.5 to 3.6.
Lots of open space from 3.6 to 3.750 if you want to be open minded on this
subject.

40 is another case and it is gonna be real tough to put that mess straight..
hi.

20/15/10 could all use some "CW Trimming" today.

I still like my suggestion......bottom 25 of ALL HF bands....CW ONLY. No
digital, etc. That way those that want can.

Those that don't.....won't.

Why so little? Should be at least this much:

Morse Code Only Subbands:

1800-1830
3500-3575
7000-7050
10100-10115
14000-14050
18068-18083
21000-21075
24890-24905
28000-28100

Why not?

I think it is an excellent solution (except for the 10KHZ only part) to the
situation.

Knowing the FCC, if it takes it off their hands they will jump on it. If
they have time to write up the NPRM that is.

Ackshully, one ought to go to the SOURCE which is easily
accessible by anyone with Internet access. Just go to the
FCC ECFS and for WT Docket 98-143, look under 25 and 26
January 1999 for postings by LeRoy Klose III. Include the
attachment links.

That gets one into Larry Klose's remarkable summary of ALL
Comments on 98-143 up to 25 January 1999 (the official
cut-off date was 15 January 1999).

Brian, Jimmie wants to have everyone look at "second-hand"
information, an encapsulated form. It is better to look at
the REAL stuff, FIRST-HAND, which is readily available.

>>
>> 57% of those who commented on 98-143 wanted 12 or 13 wpm for Advanced.
>> That majority did not get what they wanted.
>

>Lessee, 57% + 57% + 57% = 171%, a clear majority.

Jimmie has a wonderful way with numbers... :-)

Jimmie is also stuck firmly in the PAST. 1998 was SEVEN YEARS AGO and the Internet was in its 7th public year.

FCC 99-412, ordered in December, 1999, established the "Amateur Restructuring" which took place in mid-2000.

AT THE TIME (1998-1999), it was IMPOSSIBLE to eliminate the morse code test for ANY U.S. amateur radio license having privileges of operating below 30 MHz. The barrier was S25.5 of the ITU-R...colloquially known (or mis-known) as "the treaty." [there is NO specific treaty on morse code, only the honor system whereby all administrations are supposed to adhere to ITU decisions on standards and allocations]

Conveniently missing is that the FCC's reasons for 90-53, of 1990, 15 years ago, was that it did not feel that any manual morse code skill test was any sort of qualifier for the Commission to grant an applicant a license. That established the reason-for-being of creation of the no-code-test Technician class license.

Also conventiently omitted is EIGHTEEN Petitions, nearly all varying in general "re-re-structuring" having none-some-all code testing. Absolutely NO CONSENSUS could be gained from reviewing all 18 Pentitions...even though the Commission had stated publicly several times that it wanted a consensus. The "amateur community" is highly polarized on the subject of code testing and remains so seven years after 1998.

This year, 2005, is SEVEN years from the 98-143 Docket. It is also the 14th year of public access to the Internet (it went public in 1991). Far more citizens have access to the Internet in 2005 than they did in 1998. In 2003 the Census Bureau reported that one in five Americans had some form of Internet access then. Nearly all the Comments on WT Docket 05-235 are electronic rather than written on paper. So far, in the 23rd day of Comments on WT Docket 05-235, there are 1720 documents on file, about 75 a day on the average! Compare that to the 2300+ Comments of WT Docket 98-143 whose commentary period was extended for nearly six months after release. There's far more "traffic" on 05-235 than there was on 98-143.

At time NOW, in 2005, the MAJORITY are very adamantly showing they ARE a majority. Unambiguous opinions (95.3% of all filings) show a 4:2:1 ratio of For:Against:Extra-Only on elimination of the code test. There is easily a 2:1 ratio of those favoring NPRM 05-143 versus those opposing it.

The IARU, helped/nudged/influenced by international membership of NCI, was the main operator in wanting S25 of the ITU Radio Regulations re-written. [it was more than just S25.5 covering code testing] It was done in mid-July, 2003, over two years ago. Since then TWENTY-THREE other countries have dropped morse code testing for their radio amateurs licenses having below-30-MHz operating privileges.

Summary: The FCC wants to drop code testing, the IARU wants to drop code testing, 23 nations already have done so, and a CLEAR MAJORITY of WT Docket 05-235 Commenters want it dropped. That CLEAR MAJORUTY is 2:1 for dropping it versus those wanting it retained. That CLEAR MAJORITY is 58% of those who have unambiguously commented.

Jimmie wants to crawl back seven years and live there... :-(

>>to Somalia. Fix your logs with a script of "-2" in the year column.
>>Best of Luck.

> Didja fix your logs??

So, if we do it per your instructions, would it be:

10/25/92-2 1916Z N0IMD 28 MHz SSB

or

10/25/-2 1916Z N0IMD 28 MHz SSB ??

Perhaps the 1993 QSOs should read 93-2.

At any rate, I don't think I'll be changing the logs.

I love code, too, but we are going to change, like
it or not. We need to work toward a "win-win" for
both sides of this argument, instead of ending-up
with a "lose-lose" by an "all or nothing" attitude.

One of the chief arguments against Code is the large
slice of spectrum needlessly allocated to it.
The new digital modes are a fact of life we
must accept, and they require spectrum.
That most hams want their CW freqs to end in "0" or "5"
is a matter of convention and laziness, not necessity.
10 KC will handle 15-18 CW QSOs at once with even
modest equipment, and it is rare during non-contest
days to hear that many in the present allocation on
any band at any one time.
After the Code requirement is dropped,
there will be far less CW operators- not more,
and they will need less dedicated spectrum.
Moreover, a request for a 10 or 15 kHz "preserve"
is much more likely to be granted, given the arguments
against the current CW spectrum alocations,
than asking for needless and wasteful swaths of
50 and 100 kHz. A compromise that gives
exclusivity and premium incentives in exchange
for the current wasted spectrum is a good deal
for both the digital and CW communities.

well in the eyes of those that see CW under attack they do see still
see a need for a coded reservation, and they fear that they will lose
everything out side of it

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.homebrew,uk.radio.amateur

What is Ham Radio?

Ham Radio is a technical pursuit for those who
are interested in the science of radio wave
propagation and who are also interested in the
way that their radios function. It has a long-standing
tradition of providing a source of engineers who
are born naturals.

Ham Radio awakens in its aficionados a whole-life
fascination with all things technical and gives
an all-abiding curiosity to improve one's scientific
knowledge. It's a great swimming pool, please dive in!

This excitement causes a wish to share the experience
with ones fellow man, and shows itself in the
gentlemanly traditions of Ham Radio.

Radio Hams are in a unique privileged position in that
they can construct and operate their own equipment! No-one
else has this privilege. Users, such as broadcasters,
the po lice and armed farces, CBers and mobile phone
users have to purchase ready-made gear. Manufacturers
are not licensed to operate their gear. Radio Hams
are qualified to design, build and then
operate their own pieces of equipment. They do this
with gusto, and also repair and modify their own
equipment. This is a privilege well worth the effort
to gain, and one to be jealously guarded.

The excitement that drives a Radio Ham starts with
relatively simple technologies at first, perhaps making
his own Wimshurst machine and primary cells. Small pieces
of test equipment follow, possibly multimeters and signal
generators. Then comes receivers and transmitters. It is with
the latter that communication with like-minded technically
motivated people takes off. The scope for technical
development grows with the years
and now encompasses DSP and DDS. There is also a great deal
of excitement in the areas of computer programming to
be learnt and applied.

The technical excitement motivates Radio Hams to compete
with each other to determine who has designed and manufactured
the best-quality station. This competitiveness is found in DXing,

competitions and fox-hunts.

-----OOOOO----

However, beware! A Ham Radio licence is such a
desirable thing to have that there are large
numbers of people who wish to be thought of
as Radio Hams when, in fact, they are nothing
of the kind! Usually such people are a
variation of the CB Radio hobbyist; they buy their
radios off the shelf and send them back to be
repaired; they are not interested in technical discussion
and sneer at those who are; they have no idea how
their radios work inside and have no wish to find out;
they are free with rather silly personal insults;
they have not satisfied any technical qualification
and their licences prevent the use of
self-designed-and-built equipment.

These CB types engage in the competitive activities
with their Cheque-Book-purchased off-the-shelf radios
in a forlorn effort to prove that they are Radio Hams.

No _REAL_ Radio Hams are deceived by such people!

Even though its true that only amateurs are allowed to make their own stuff, I don't see the relevance of bringing the armed services, police etc into the argument. This FarceAQ becomes increasingly bitter and bizarre with each passing week.

Perhaps it is that those who respond in a negative style,
or those who respond with Childish Broadcasts (CB), are
from the very group of CBers that are
warned against in the FAQ?

I just hope that we have not left it too late to
prevent Ham Radio from becoming a gangrenous
degeneration of such non-technical CBers.

> level shows just how sick you truly are

Why?

I consider all of them equally offensive.

Each of them harm society in thier own right.

For example, look where lying has got you!

> > Seems to me he made some on-the-head comments.
>

"really" "requires" "test"

It's not boneheaded. It's real.

I think the change will be far less than some expect.

Back in 1991 we got a nocodetest license for all of VHF/UHF. Did we get lots more new hams in the 1991-2000 time period than we got in the 1982-1991 time period?

In 2000 the code test was reduced to 5 wpm only and the writtens cut almost in half. Yet we have almost 10,000 fewer hams now than in 2000.

> We need to work toward a "win-win" for
> both sides of this argument, instead of ending-up
> with a "lose-lose" by an "all or nothing" attitude.

Here's the win for Morse Code loving hams: Free space

Here's the win for non-Morse-Code loving hams: All the rest.

> One of the chief arguments against Code is the large
> slice of spectrum needlessly allocated to it.

*WHAT* large slice of spectrum?

There is currently *no* part of the HF/MF ham bands for Morse Code only in the USA. Not one kHz. All of the bandspace not allowed to voice/image is open to digital/data modes like PSK31, MFSK, RTTY, etc.

The technical advances we keep being promised will be in those modes, not in SSB.

> The new digital modes are a fact of life we
> must accept, and they require spectrum.

And they have it! Take 80 meters - from 3500 to 3750 is wide open to every digital mode you can imagine, as long as it isn't digital voice.

> That most hams want their CW freqs to end in "0" or "5"
> is a matter of convention and laziness, not necessity.
> 10 KC will handle 15-18 CW QSOs at once with even
> modest equipment, and it is rare during non-contest
> days to hear that many in the present allocation on
> any band at any one time.

Maybe where you are, but I hear a lot more than that on 40 meters at
night.

> After the Code requirement is dropped,
> there will be far less CW operators- not more,
> and they will need less dedicated spectrum.

I would not be so sure.

Hams in Germany report *more* interest in Morse Code
among new hams, not less.

Without a test, new hams will learn Morse at a reasonable
speed (13-16 wpm) from the beginning, sending and receiving, rather
than just the bare minimum to pass the test.

> Moreover, a request for a 10 or 15 kHz "preserve"
> is much more likely to be granted, given the arguments
> against the current CW spectrum alocations,
> than asking for needless and wasteful swaths of
> 50 and 100 kHz.

That's not how FCC works.

Look at the history - every time a compromise has been offered, FCC
goes way beyond it.

Back in 1990, when FCC was pushing a nocodetest license, ARRL
and others suggested a limited-privileges VHF/UHF license. Low
power, no 2 meters, etc. FCC took that as an endorsement of
the nocodetest idea and simply dumped the code test for
Technician, which was not what was wanted at all.

In 1998-1999, various compromises were offered, like the 5 wpm General
and 12 wpm Extra. FCC just went to 5 wpm across the board.

The nocodetest folks don't offer any compromises. I say that
15% of each HF/MF band as Morse Code only space is perfectly
reasonable. The Morse Code using hams will flock there, and
leave the rest of the bands to other modes.

What possible reason is there not to? The voice and digital modes all
have more than 15%.

> A compromise that gives
> exclusivity and premium incentives in exchange
> for the current wasted spectrum is a good deal
> for both the digital and CW communities.

What wasted spectrum?

I think you meant "3.6 to 3.7"

> Lots of open space from 3.6 to 3.750 if you want to be open
> minded on this
> subject.

All of 80 meters is open to digital modes. You know, the
modes all those new, young, modern hams are going to use
when Element 1 goes away.

If there's so much room, then what's the problem making
3500 to 3575 Morse Code only?

> 40 is another case and it is gonna be real tough to put that
> mess straight..
> hi.

Not really. The mess is due to the rest of the world wanting
7100-7300 for SWBC. That's going away, even as we speak, and
more and more of the rest of the world is letting their hams
have 7100-7200. Eventually 7000-7300 will be worldwide
exclusive amateur.

So what's the problem with 7000-7050 being Morse Code only?
>
> 20/15/10 could all use some "CW Trimming" today.

Let's cut to the chase. It's about more room for 'phone and
less for Morse Code and digital modes. Some folks talk big
about "new directions" and "modernization" and "fresh ideas",
but what they really mean is more bandspace for SSB.
>

"its".

> > drop, it needs less and less allocations...

Who says CW is dropping?

> > as
> > no-coders now enter CW will have to shrink to accommodate the > > new users and their modes...

You mean SSB, right? Because there's no Morse-Code-only subbands
on HF-MF in the USA.

Works for me. Such is the case already
with ARRL bandplans for USA already.
I'd have no problem with the bottom 25KHz
each HF band being CW only.

Cheers,
Bill K2UNK

It seems true that many, if not most, CW fans fear that other modes will "over-run" them if the ARRL's "plan" for regulation by bandwidth goes forward in its present form. I have always stated truthfully here that I would never support any proposal to ban or restrict the use of CW in any way, shape, or form and that position still stands. I *also* firmly believe that CW and other modes should NOT be "squeezed out of existence" or "over-run by Winlink/PactorIII robots" as many fear will happen if the "plan" adopted by the ARRL BoD in July were to become FCC regulation.

As a candidate for the ARRL Atlantic Division director's position, I have gone on record publicly (on the QRP-L reflector and on qrz.com and now here on r.r.a.p) that, had I been on the ARRL BoD in July, I would NOT have voted for "the plan" because I believe that the fact that virtually NOBODY seems to like it indicates to me that it's broken and needs to be fixed if it's to go forward at all.

Bandplans and band usage are complicated issues where the ARRL or anyone else is highly unlikely to be able to please everyone - the objective needs to be to work with the different interest groups towards compromises that allow us to get to something that at least a significant majority can accept and say "I can live with that." If I become a member of the ARRL BoD I would work with all of the interested parties in an effort to forge that sort of result.

In addition to significantly improving the general level of technical knowledge and skill of hams, growing our numbers (both licensees and ARRL

members), protecting our spectrum, and getting more people trained for and involved in emergency communications, one of the MOST pressing problems we face is to reverse the trend of "compartmentalizing" ourselves into "factions" whose whole world revolves around one mode or one activity, because the resulting "turf wars," suspicion/mistrust/paranoia, in-fighting, and attacks on each other divide us in ways that both are bad for the ARS as it's seen externally and bad for the ARS internally as we get along with (or don't) each other.

We should ALL be "hams" (period) and work together cooperatively and constructively going forward into the future on the truly important issues facing ham radio and the ARRL. ALL hams should treat each other with respect and courtesy, regardless of license class or operating preferences. Experienced hams need to welcome new hams with the spirit of patience and helpfulness that "Elmering" embodies, rather than treating them as some inferior form of life.

As far as "dumbing down" goes - I don't buy it - as Ed Hare, W1RFI (someone who I think most here respect), has recounted ... the "beginner's test (novice)" in his day had a 3-1/2 page study guide, the general study guide was 16 pages (I had mis-remembered and stated 12-14 pages in a couple of presentations, but that was an honest mistake and doesn't really alter the point). Today, the "Now You're Talking" - the study guide for the "beginner's test (tech)" is on the order of 200 pages or slightly more and covers MANY more topics than the study guides of Ed's test-taking days ever covered.

The point is that things have NOT been "dumbed down" ... there is more to study and learn than ever before - just to become a "beginner." I was licensed long enough ago to have been a member of QCWA for some time, and I am FIRMLY convinced that those who complain about "dumbing down" of the testing are either being disingenuous, or more likely simply remember the tests that they took many years ago as being MUCH harder than they actually were. Besides, the test isn't a proof that you "know all there is to know," nor SHOULD it be.

I'd ask older hams with higher class licenses to think back to the mistakes that they made when they first went on the air many years ago - and how the more experienced hams of the time (generally) were patient, tolerant, and helpful. Show the newcomers the way in polite, respectful, and constructive ways, rather than slamming them and telling them they're no good!

If anyone (particularly from the Atlantic Division) wants to see information on my background and qualifications and some issues material, it's available on my personal website at http://home.ptd.net/~wk3c. Questions and comments via direct e-mail are, of course, welcomed (again, particularly from ARRL Atlantic Division members).

Carl - wk3c

# 2470. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-20 17:11:27 UTC
From: LenAnderson@ieee.org
Message-ID: <1124557887.528015.319280@f14g2000cwb.googlegroups.com>
Source record: 116820

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of midnight, EDT, 19 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1743

Indeterminate/duplicates (note 1) 80

Unambiguously Against NPRM (note 2) 461 27.72%
Unambiguously For NPRM (note 3) 966 58.09%
Code test ONLY for Extras (note 4) 236 14.19%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
midnight of 19 Aug 05 that would be 1663.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

end off

Nor would I, per se, but since narrow modes like PSK31 take about the same bandwidth, does it make sense to keep them out?

However, whichever way that question is answered, there is a problem is that in some bands the bottom 25 kHz is for Extras only.

Would the Extra CW ops be willing to share their "exclusive playground" ??? Would they be willing to share with, e.g. PSK31???

(I should point out here again that I do NOT favor expansion of the phone bands to allow SSB to "run roughshod" over CW and the digital modes any more than I think that Winlink/PactorIII "robots" should run roughshod over CW, PSK31, etc.)

See my other, longer post for more on this issue and others.

Define "new, young, modern." Did you mean the kind of
electronics typified by all-vacuum-tube, state-of-the-
art, designed by yourself in 1990" new, yound, and
modern?

>If there's so much room, then what's the problem making
>3500 to 3575 Morse Code only?

What makes you think that a MINORITY has any "right" to
an exclusive radio playground?

>exclusive amateur.

Bad "analysis." The "40m issue" has been going on since
1979...for 26 years. The RESOLUTION of it came about in
2003 at WRC-03. 40 meters will be resolved as to who gets
what in 2009...as outlined in the resolutions made in 2003.

That was adequately explained in the WRC-03 REPORT as
written by the U.S. delegation leader and appearing a year
ago on the FCC International Bureau pages.

>So what's the problem with 7000-7050 being Morse Code only?

What makes you think that a MINORITY has any "right" to
an exclusive radio playground?

>but what they really mean is more bandspace for SSB.

...and some folks talk big about "exclusivity for Them,"
"old directions" and "archaic conservatism."

Cutting to the chase, the PCTA insist on EXCLUSIVITY for
their "nobility" as if they were Gods of Radio. They
consider themselves some kind of Elite, a rationalization
for being able to evolve, to cope, to interact with the
rest of the "amateur community."

>> I still like my suggestion......bottom 25 of ALL HF bands....CW > ONLY. No

Irrelevant. WT Docket 05-235 is NOT about license classes
or the rank/status/privileges of the "ruling class." :-)

Do you have a "5-Year Plan" for the Party, Commissar?

>(Does this guy know what a sunspot cycle is?)

Does Commisar Miccolis realize that RADIO itself is only 109
years old? Almost "10" in "Sun Years."

Of course, to a 14-year-old, waiting 11 years until 25 seems
like a virtual eternity. It's a mental state, very subjective.

>> > As CW continues its'
>

>"its".

Sister Nun of the Above has a bottomless drawer of rulers.
[she should empty out her drawers...ugh!]

>> > drop, it needs less and less allocations...
>
>Who says CW is dropping?

Tsk, tsk. As in the old saying, "if all you have is a hammer,
everything looks like a nail."

Coders who play in their almost-exclusive radio playground
just can't seem to keep count or recognize the territory.

>> > as
>> > no-coders now enter CW will have to shrink to accommodate the
>> > new users and their modes...
>
>You mean SSB, right? Because there's no Morse-Code-only subbands
>on HF-MF in the USA.

Feeling disenchanted, Jimmie? Contact KH2D and seek to open
up "No SSB International." Technically well-done website of
the past, but stuck in its little Guamian territory in the
middle of the Pacific, totally surrounded by water (it was
all wet in thinking).

Coders ALREADY have TOTAL EXCLUSIVITY for OOK CW in 6m, 2m
bands. They can move on up to those bands and "work" ALL
the "CW" they can, undisturbed by the unwashed masses doing
(hack, ptui) Voice or Data. ALL THEIRS! Think of the
glorious possibilities to "advance the state of the art" of
morse code! [first used in 1844, 161 years ago]

You don't like that idea? Awwwww. It is JUST LIKE CODERS
DID for the no-coders and anti-morse heathen many years ago.
BANISH them to "the world above 30 MHz" in a perfect example
of elitism, gross class bigotry. But, you Coders consider
yourself "above" the mundane, better than best, the "extra"
of the radio world, superior to all others through beeping.

Hang onto your "extra" license obtained through morsemanship,
Jimmie. It may be all you'll have in the future to show
your "greatness" in AMATEUR radio.

Being of course the only regular ham poster who is memebr of the Tech Class. I frankly don't undersatdn the "Problem" being discussed with Pactor.

Are Pactor stations not obeying the rules?

Or is it that the rules are so loose as to permit very bad usages of the Mode?

please forgo the flaming after all as Far as I know Pactor is little used (if at all) at VHF, and of course VHF with its wider bands (generalyly shorter ranges) and fewer users at any given momnet doesn't have these "problems"

The concern/fear/issues being raised by many are that the ARRL "regulation by bandwidth" proposal will result in practically all of the HF CW/data bands being "over-run by Winlink/PactorIII robots," that those stations don't "play nice" with real-time human to human modes, that PactorIII takes a lot of bandwidth for a non-proportional gain in throughput, and that Winlink and PactorIII are closed, proprietary modes that are only available through the purchase of some rather expensive, sole-source hardware and software.

There seem to be rather widely held views that "robot" stations that "don't play nice" with conventional human-human modes should be restricted to limited sub-bands because otherwise they will cause considerable interference problems, that they don't need to be able to take over huge swaths of the bands, and that closed, proprietary systems should not be "pushed" in the ham bands. (conversely, the feeling seems to be widespread that modes used in the ham bands should be "open source" - both h/w and s/w)

I hope that answers your question about what's the (at least perceived) "problem with Pactor."

73,
Carl - wk3c

Carl:

Exactly, why would arrl back such a system?

Amateur radio should not allow any PROPRIETARY hardware/software to become
a standard. We are not about supporting monopolies, we are about the free
experimentation, development, testing, construction, use, etc. of equip.
and methods/protocols, even that equipment encompassed by the homebrewer.

We need some more linux people in amateur radio for the software and more
computer hardware people for the hardware... it would be a mistake to
support companies holding a monopoly, there are already commercial
stations for that... besides, windows software just ends up enriching
bill g.

I don't think that will work any longer. Just listen to the low end of 40
meters. Lots of digital types moving down the band. They probably can't
copy cw, or not much, and giving them the benefit of the doubt "may not"
know they are interfering.

Gentleman's agreement wont work.

Here is a cool Linux thing for Hams:

http://hamshack-hack.sourceforge.net/

It is a hack of the Knoppix Linux distribution. Lots of Ham radio
goodies. Make a disk image, and you can boot your computer up in Linux.
then switch back to Windoze. Works prefect on my desktop 8^), but needs
a few tweaks on my Laptop.

I've been an Extra for 20 years. A ham for 44. I have no problem with
dropping the silly "Extra exclusive CW subbands". I answered the PSK issue
earlier.

No I didn't....I don't consider 5 CW stations in 100 KC over use of a
segement. Or should I say "Use of a segement". Nets are there for sure,
but not for long. Then the band is dead again.

>> Lots of open space from 3.6 to 3.750 if you want to be open

I no longer care to waste my time with you Lennie. You are Anti-Amateur Radio. You have no reason to be in this group. Other than to sew hate and discontent.

You don't even have a license or any experience in Amateur Radio at all. Thus your comments and input are of no interest to me. Nor should they be to any other person here.

In other words I no longer give a rip what you say or think.

Have a nice life.

Dan/W4NTI

> abuse, and yet he lies.

"is AN evil"

And no lies.

> when are you going to come clean and admit your lies

Had a real nice hot shower this morning before going to the Huntsville Hamfest. Didn't need one to admit any lies as I haven't lied.

You have, however.

Mostly to yourself.

And your "day-by-day" accounting adds up to more paranoia. Methinks I have had more effect than you care to admit.

Wherever the bee in Lennie's bonnet came from, David, it must have
been a big one.

My whole theory is that he never achieved the "recognition" that
he thought he deserved from his professional colleagues. He was never
professionally published nor was he the recipient of any award of any
importance.

Seeing a possible light at the end of his dismal tunnel, Lennie
tied his fortunes to "Ham Radio" magazine where he did enjoy getting
some bylines, however he still did not get the "recognition" he felt
entitled to.

That only further incurred his wrath since we are "mere amateurs",
incapable of understanding the complexities of RF theory and practice.

The result has been a near-decade long rant against anything and
everything that is "Amateur Radio" related. Nothing done by/with/for
Amateur Radio/Amateur Radio Operators is "worthy" or "valid". Anyone
with an Extra class licesne is a "thug", "jackboot", "Nazi", "elitist",
etc etc etc.

He IS a putz.

Alas, Steve; the world is full of people like that, who don't understand
why they should not be *given* that for which they have not worked
and which they have not earned. They become bitter and hateful adults
(being forced to give up taunting and pitching fits
after about 16... one would hope).
They have other sociopathic characteristics, as well.
Probably raised by "Dr. Spock" parents.

While I have experience with linux I am forced by the need for a number of
applications to use Windows XP on most of my machines.
I think there are a lot of people in the same boat, so I don't think that
you're going to get an overwhelming majority of hams to abandon the Windows
OS and move to linux exclusively ... HOWEVER, open source ham APPLICATIONS
can be ported to both operating systems so the users don't have to be locked
out by their choice (whether they're "forced" to use Windows for other
reasons or not) of OS.

Carl:

I can't say the lack of anything in linux forces me to use windows... however, the lack of commercial video games written for linux forces me to revert to windows to run them... "Neverwinter Nights" is an exception, and is ported to linux, however, the game is now a few years old and I went on to others and this is the main reason my private computers sport windows also...

The only factor truly forcing windows on me is other windows users, and I am paid 85%+ of the time to develop on the windows platform because of them, and almost exclusively for NT these days (thin clients like cell phones are an exception)...

Anything windows can do--Linux can do, Linux can just do it better... windows on the other hand cannot do all which linux can--mostly this is because of MS having to hold the source secret and pursue proprietary ends... what is good for MS pockets is not good for the consumer--generally...

you noticed Stevie caginess Now if they were combined with bit of
caution elsewhere I could understand them Indeed thanks to folks like
Stevie ia void anything in here that can be pinned down

As to prostate exams well that would fit with Stevie obsesstion about
male body parts that he clearly displays

>

I used to trumpet the same thing about IBM's Warp-OS/2 OS, which
remains my main system. If and when my favorite text editor gets
released in a version for Linux (it's allegedly in beta) and I find
a mailer and newsreader that I like, I may migrate the whole shebang
to Linux and bid Warp a reluctant farewell.

For ham use, I'm running XP for APRS and Win 98 for Packet (the DOS
program that I use doesn't run well under XP). Those "data" modes
which don't run on a TNC are on the XP machine. Three machines
next to my operating console - don't need to turn the heat on in
this room during the heating season.

Phil:

I never could figure IBM dropping os/2, they dropped the ball twice, once when they didn't purchase DOS directly from bill, second when they let bill out-market 'em with windows (an idea he stole from apple.) OS/2 was a much superior os to windows, warp was a true contender to linux.

Shows you that the power of marketing can beat any superior product...

Heyo, John, off the subject but "BASS" was Breath-Aim-Sight-Squeeze
acronym in the U.S. Army of the 1950s.

If you search through past posts of Stebie da Wundermurine (K4YZ)
you will find his implied "threat" of "a few ounces of pressure"
which was, of course, in reference to the squeezing of a trigger.

Hence my remark that you quoted. :-)

In his emotional volatility he forgot to look to see if anyone
could shoot back, hence his continuing anger and frustration
at those who CAN and DARE to do such a thing! :-)

>and which they have not earned.

David, you are relatively new to THIS din of inequity and haven't
been exposed to the Wrath of Stevie when you have Opposed his
personal opinions! :-)

Robeson has seldom, very seldom argued a SUBJECT in here, choosing
instead to launch a series of Personal Attacks on anyone daring
to oppose him on anything. Some Google searching will show that
in sufficient quantity (thousands of postings insulting others)
to bear that out. [the best referene on his personal frustrations
anguish, and hatred displayed for all to see]

In the last eight years in here, I've written (and opined) that
United States amateur radio activity is interesting and fun for
those who take a real part in it, for their personal enjoyment as
an avocational pursuit. Having BEGUN HF radio communications in
1953 and NEVER having had to use/operate/know morse code then or
at any time in a successful career as an electronics design
engineer (I am retired - from regular hours), I feel that morse
code testing for a radio AMATEUR license is unwarranted and the
mystique around it ridiculous.

If you wish to see where I began in communications 52 years ago:

http://kauko.hallikainen.org/history/equipment/stations/My3Years.pdf

> They become bitter and hateful adults
>(being forced to give up taunting and pitching fits
>after about 16... one would hope).

David, you are free to think anything you wish of me, but in the
reality of the newsgroup, it won't matter a great deal to me. I
will remain as outspoken as ever. :-) All that nastygrams do is
to take up space and a tiny amount of time in showing just how

vacuuous and puerile such commentary is...

>They have other sociopathic characteristics, as well.

Robeson's long history of postings in here reads like a Psych 101 introductory precis on Sociopathy. :-)

>Probably raised by "Dr. Spock" parents.

Not in my case. :-) I was raised by naturalized citizen (born in Sweden) parents in the 1930s and 1940s. Benjamin Spock probably had not yet entered college yet...and certainly hadn't begun any PhD Dissertation. :-)

David, you were born in 1957 and are 48 years old. I have MORE years as an adult working for a living than you have in total life experience. Now, I've read your Comment on WT Docket 05-235 and agree with you that morse code testing has no place in federal amateur radio licensing examinations. On the veneration of morse code itself, we differ markedly. We can confine any public discussions on WT Docket 05-235 to that and avoid personal squabbling such as demonstrated by Robeson and Jeswald...or not. Your choice. But, "ya gotta know da territory!" first... :-)

Oh, ohhh...now begins another tirade of Stebie against the world.

>After parsing your posts I got suspicious because you revealed some
>details but nothing verifiable -- almost like you were very careful
>not to declare anything that could be proven to be a lie.

Welcome to the club, Frank. :-)

Stebie gonna shout, "CALL THE VA!" :-)

Of course, if one isn't a personnel person in a business or a
family member/relation, DETAILS will be null, zero, none. It's
a matter of a LAW passed (in the 70s?) by Congress forbidding
free and open release of data to just anyone about military
records. <shrug>

> So I emailed
>several of my old Marine buds (a couple are still active duty). None
>of them remember any avionics tech named Robeson, although two of them

>giving unnecessary prostate exams. You wouldn't be him, would you?

Stebie wouldn't admit it if he was... :-)

Stebie now gonna shout, "YOU ARE AGINST HAM RADIO!" or other,
unrelated to the subject personal insults in response. It's
predictable from past puerility of his.

>BTW, one of them wants to follow up with this because apparently it's
>a crime to impersonante a military officer -including- non-coms,

> reasons or not) of OS.

Right. The huge majority of us don't "choose" our operating systems, we
choose our apps for our own particular purposes and use the O/S needed
to run the apps. As is the case in just about all fields, including ham
radio, Gates has a virtual hammerlock on us because the vast majority
of the apps we need are written for Windows and not for Linux or OS X
or O/S2. Yes it's a vicious circle, the momopoly from hell. Reality is
what it is.

Take my own primary operating interest which is HF dxing and dx
contesting and the current leading edge software used by the tens of
thousands of us dxers and contesters. Writelog, DX4WIN and TRLog and
others, almost all Windows apps. There are a few legacy DOS loggers
like CT which are still widely used and a few MAC and rudimentary Linux
loggers floating around but they're all but invisible in competitive

contesting.

Consider the N1MM contest logging program which is very much a collaborative, open source program. It's *huge*, the manual alone is 350 pages. It does stunts like variable speed keying CW via the printer port, a mouse click on an onscreen 2M packet spot will bandswitch just about any brand/model HF xcvr to a specific freq on any band almost instantly and on and on.

Maybe it can be ported to Linux, I wouldn't know. What I do know is that I utterly fail to understand why anybody would even think about porting this beast over to Linux when it's obviously so much easier to simply run it in Win 98 or whatever in some surplus $100 Winbox and be done with it.

Many here have "opposing" opinions.

MOST don't find it necessary to respond with the adjectives and
diminutives that you have, Lennie.

You eap what you sew, little man.

Actually you have gone to great lengths to harrass, intimidate, deceive and disparge Amateur Radio at every turn.

> If you wish to see where I began in communications 52 years ago:
>
> http://kauko.hallikainen.org/history/equipment/stations/My3Years.pdf

And "52 years ago" was the last time you had anything to do with "radio" that even closely approximates anything "Amateru Radio"-ish...And even then you were only a radio mechanic at a rear-area radio station in the Army...

> > They become bitter and hateful adults

That means that regardless of how effectively he might be able to otherwise express his opinions, he will ALSO take every opportunity to be as foul-mouthed and deceitful as possible, never missing an opportunity to misrepresent the reality of what is MODERN-DAY Amateur Radio.

> All that nastygrams do is
> to take up space and a tiny amount of time in showing just how

Well, "Frank", you have the same OFFICIAL resources at your disposal as I do, so I recommend you use them instead, rather than making foolish statements that land you squarely in the "running my mouth off without adequate substantiation of my position" behind them!

Several of my "buds" (with whom I still stay in contact with) from the MCAS El Toro Aero Club were tracks and armor guys from Pendleton. What are the odds if I say "Who's Frank Gilliland and what did he do for the Marines?" that they'll shrug their shoulders and say "Frank who...?!?!"

> BTW, one of them wants to follow up with this because apparently it's
> a crime to impersonante a military officer -including- non-coms,

Whelp, all I can say is use some of those same OFFICIAL sources to keep from looking like a fool, Frank.

But I'd also say "hurry" because your credibility is slipping.

Steve, K4YZ

> through the purchase of some rather expensive,
> sole-source hardware and software.

I'd state the first part somewhat differently:

One concern is that the proposed rules would/could
unleash "robot" stations of all kinds anywhere in the
non-voice/image parts of the bands. There would be
no way for the typical PSK31, RTTY or Morse Code
operator to know they were on a frequency used by
a "robot" until the robot fired up on top of their
QSO.

A human operator who fires up on top of an existing
QSO can be in violation of the rules. What gives
robots an exception?

PactorIII and Winlink are indeed proprietary, which
goes against the grain of open-sourcing and freeware.
Compare those modes to, say, PSK31, with its wide-open
software and hardware.

To most of us there's nothing wrong with hams using
propietary software or hardware - until it becomes
an endorsed standard. IOW, 'buy this particular
piece of hardware and software from this particular
company or you cannot play the game' doesn't sit well.
>
> There seem to be rather widely held views that

> should not be
> "pushed" in the ham bands. (conversely, the feeling seems
> to be widespread
> that modes used in the ham bands should be "open source" - both > h/w and s/w)

Exactly.

It is my understanding that Winlink has become the method of
choice for some folks with boats to send and receive their
email. This raises the question of commercial/pecuniary content
as well - how are such things filtered?

Add to the mix that it's ARRL pushing the Winlink/PactorIII
thing and you can see the opposition rising...

What's your take on such 'robots' on HF, Carl? Should they
be treated just like any other station, or should they have
some special restrictions based on their unattended nature?

Should ARRL endorse/standardize/push modes requiring the
purchase of proprietary hardware and software from specific
providers?

>What are the odds if I say "Who's Frank Gilliland and what did he do
>for the Marines?" that they'll shrug their shoulders and say "Frank
>who...?!?!"

You never know. Quite a few friends from boot camp ended up at Pendleton (including one of the Marines currently on active-duty that I contacted), and I was with 2nd AAV for almost a year. I also used to hang out with some of the tankers at Stumps. Don't forget that there weren't too many Marines in garrison after Viet-Nam, and techs were an even smaller group. If you know a radio tech from tanks or amtraks at the same time I was in then there's a real possibility he knows me or I know him (or her, although most WM techs were sent to 4th or 5th echelon stations). Heck, I even know a couple that got stationed in Hawaii, the lucky bastards! But it might help to mention that I went to GRRC at Stumps with the late Cpl. Moses Arnold -- the "class clown", and truly one of the nicest guys you could ever meet (yeah, people say that casually about a lot of people but Moses earned it). To make things even easier for you, would it help if I provided a list of recruits from my platoon at MCRD? Or the Marines from the BE and GRRC classes at MCCES? Or from the Comm Platoons at 3/8 or 2nd AAV? It's not a problem since I remember almost all their names. Most Marines do, which is why I don't think you will have much of a problem finding at least one or two that remember me. So feel free to check with your fellow Marines (assuming, of course, you are telling the truth).

And if you happen to doubt -my- service in the USMC, feel free to check the front desk register (late Spring to early Fall, 1984) at the US/UK embassy in Beirut. Or you could email Ollie North (then a Major) who's office was on the 4th floor at the end of the hall opposite to the ambassador's office. He might remember me as the tech from the Nassau who put his sat dish back up after the mortar round bounced off the roof, and replaced the power supply for his URM-201 with the shop's ugly-but-reliable supply with the plywood bottom. (BTW, if you -do- get into contact with Lt. Col. North, ask him if he knows who owned that mint 1961 Chrysler 300 in the back parking lot!)

>> BTW, one of them wants to follow up with this because apparently it's

I'm not worried about my credibility. On the contrary, -you- have yet to give a direct answer to any specific question regarding your cruise in the USMC.

> Your choice. But, "ya gotta know da territory!" first... :-)

A careful reading of my post
(and it was written carefully, just because of this)
will show that I did not aim it specifically at you,
though it was easy to imply, I suppose. I said
"people like" those he mentioned.
Though I do admit your first post within the tread read
"tart" to me, so I added a little lemon to mine, as well ;-).

I don't know you, Mr. Anderson, any more than I know
Steve, but it's a good bet you have both halo and horns
at the same time, just like everyone else on UseNet.
Some have more one than the other, and at different times.
But we can discuss this issue despite harps and pitchforks.

I believe that Morse Code deserves preservation on two counts:

1. It has proven simple, practical and useful for 160+ years.
That *you* have not used it, or that I have, is irrelevant.
A very great many have, and successfully, over a long time.
Bicycles are also "old technology," but that does not
invalidate them as a simple and reliable means of transportation.
A large fraction of humanity uses them, because they
do not have the luxury of expensive automobiles and gas.
Continuing within the context of such a society
(or what an more wealthy society can certainly become,
as anyone in South Africa can tell you):
One must practice and develop skill in using a bicycle,
if he wants to get around faster than walking.
If one is unwilling to do the work and take the occasional
fall needed to become a proficient bicycle rider,
then they must accept walking.
It is foolish and futile
for those who have chosen to walk
to curse those riding bicycles and the bicycles themselves.

It is also foolish and short-sighted to take for granted that,
once one has an SUV, that the need to ride a bicycle
will never come again. On such a day,
If *all* have forgotten how to ride,
than all of us shall walk.

If even a few are rewarded for remembering how to ride,
they can teach the many.

2. Historic preservation.
There are some who place no value on spending assets to
preserve touch-stones of humanity's progress.
Most of us do, which is why we spend money and labor
preserving "obsolete" ships, aircraft, telephones,
steam engines, etc. All of them take money and work
to preserve. Morse Code has been at least as important
as the development of the telephone, radio and even
the internet, having been the first "real-time" means
of knitting-together the globe. I submit that is a
valid reason to incentivize its preservation,
and that my proposal is an inexpensive, efficient
and reasonable means of doing so.

But most of the money we spend are rasied form private sources with occasional expenses of public money. you want to set aside of the few things we can't buy or make any more of

Spend your effort effort if you like

but frist show that Morse is in any real danger before expecting to me to chip in for something that is

what is the Value of the Spectrum you propose to set aside soley for Morse Code, without of course vacating its use from the rest of the ARS spectrum

How is that different from anything else In a strnge place I don't know
when I start an FM simplex QSO that this area uses that simplex freq
for packet links

and why is it a problem I thought CW always got through, yet it needs
protecting from Pactor?

Assuming the robot listens before sending well it looks like anything
else I hear about in HF

>
> A human operator who fires up on top of an existing

David:

No where in amateur radios mission statement is anything mentioned about a purpose to be "amateur museum-ists."

CW will stand or fall upon its own merits. If there are amateurs who wish to collect ancient forms of communications (african messages drum, indian smoke signals, message arrow, morse code, etc) they should do so on their own.

Geoffrey:

Lean to edit your "hosts" file if you use windows. You can stop windows
from accessing the ads, and thereby anyone from receiving revenue from
those ads. (will also work in linux)

K4YZ:

Personal attacks are catching. If someone pulls a personal attack on you,
you are certainly tempted to return it.

However, when studying what advantages a person pulling personal attacks
receives--loss of respect, loss of credibility, loss of self-respect, loss
of anyone taking them seriously... some have pulled these "tricks" for
such a long length of time, it is doubtful they have any shred of dignity
left to recover!

One is soon placed back on a more conventional road...

No, CW does *not* "always get through".

> Assuming the robot listens before sending well it looks like anything
> else I hear about in HF

No, robots do *not* listen before transmitting which is against the
regs and is the crux of the problem.

A human operator causing QRM is either lousy operating practice or an
accident, a robot blindly causing QRM via it's inherent design is
illegal. One solution might be to come up with a robot which tunes
around it's frequency before transmitting. There's one for you
code-writers to chew on.

No mode always gets through. There are some times when Morse Code gets through and other available modes do not. This plain, simple fact has been misquoted and perverted by some.

> > Assuming the robot listens before sending well it looks like > > anything else I hear about in HF
>
> No, robots do *not* listen before transmitting which is against > the regs and is the crux of the problem.

There's also the issue of what constitutes "listening". A robot may listen for another Pactor III signal, yet not for a PSK31 or Morse Code signal.

How much of a listen is long enough, and on how much on either side of the frequency?
>
> A human operator causing QRM is either lousy operating practice > or an accident, a robot blindly causing QRM via it's inherent
> design is illegal.

There's also the 24/7 nature of the robots.

> One solution might be to come up with a robot which tunes
> around it's frequency before transmitting.

Yup. And maybe sends "QRL?" in Morse Code before it opens up.

> There's one for you code-writers to chew on.

The situation is somewhat like the dawn of the FM repeater era on the ham bands. A typical ham FM repeater essentially takes over two frequencies (input and output)in its coverage area.

There was a time when a ham repeater required a special license with special callsign, and the application for it involved a pretty detailed description of the setup, its operation, etc., with things like HAAT specified. Even today we have repeater

coordination.

But VHF/UHF coverage is fairly predictable and consistent. A typical ham VHF/UHF repeater covers a few hundred square miles except during unusual conditions. Even a moderately powered HF station can cover millions of square miles.

The "regulation by bandwidth" proposal has some good basic concepts, but it needs some serious work before it is ready for prime time. The fact that so many different groups are opposed to it, and so few in favor, shows that it needs rework.

He does that with his threats, too. "Bricks through windows, slashed tires, and terrorized wives." I think he's a creep.

So I emailed
> several of my old Marine buds (a couple are still active duty). None

Steve has almost total fixation with Len's "putz." He frequenly used phrases like "bunk-buddy" "in bed with" when referring to two men.

> BTW, one of them wants to follow up with this because apparently it's
> a crime to impersonante a military officer -including- non-coms,
> active -or- retired. So what should I tell him, "Gunny"?

I'm still waiting to hear Steve's war stories about his claimed "seven hostile actions." The Stolen Valor investigators might be interested.

Regardless of who Dan Jeswald is, I operated legally. I had the
permission of my commanding officer.

David Heil/K8MN, worlds greatest DXer, claimed that a commanding
officer cannot give those priveleges. I proved him wrong with a quote
from the ARRL website.

Needless to say, I'm ALWAYS wary of the expertise of Extra's. They
just get it wrong so much of the time.

That is a guaranteed inevitability. Instead of the neighbors saying,
"he was such a nice man," they'll be saying, "I knew the VA should have
kept him on his meds."

ALL public postings are OPEN for comment, any newsgroup. ANY
kind of postings as you will gather with some experience in
here. It's been like that even before ARPANET spun off the
newly-created University Net (USENET).

> I said "people like" those he mentioned.

"People like" turns into whatever your reaction is to
certain posters. To repeat, you WILL notice the "flavor"
of Robeson's "style" in this newsgroup...which is little
more than a frustrated, angry person's wanting to turn
every single thread into some personal vendetta.

>Though I do admit your first post within the tread read
>"tart" to me, so I added a little lemon to mine, as well ;-).

Not a problem to me. :-) That's the "territory."

>I don't know you, Mr. Anderson, any more than I know
>Steve, but it's a good bet you have both halo and horns
>at the same time, just like everyone else on UseNet.
>Some have more one than the other, and at different times.

Irrelevant, really. The SUBJECTS are not quantified or
qualified by personal attacks against others. Yet, they
are colored and flavored and chopped into meaningless
puerile babble by a few who must vent their aggressions,
caring little for anyone but themselves.

>But we can discuss this issue despite harps and pitchforks.

Absolutely! [but...:-)...the harps will be discordant
and the pitchforks jabbed by others in their obsessive
need to fight]

>I believe that Morse Code deserves preservation on two counts:
>
>1. It has proven simple, practical and useful for 160+ years.
> That *you* have not used it, or that I have, is irrelevant.
> A very great many have, and successfully, over a long time.

Also true is that morse code has been SUPPLANTED, displaced, replaced by more efficient means of communication by humans in all radio AND wired venues...except in the avocational activities of radio hobbyists.

Insofar as WT Docket 05-235 is concerned, that issue is solely about Test Element 1 of the U.S. amateur radio license examination. Anything other than elimination or retention of Test Element 1 in regards to morsemanship skills can be regarded as personal polemics that reach far beyond the subject.

A closer examination of the history of Al Vail's contribution to the "morse code" shows merely that it is a representation of the English language characters used in a PRIMITIVE technology. One can only describe the original Morse-Vail Telegraph System as Primitive (with a capital P). One can only describe the OLD radio of 1896, the one without any active amplification devices as PRIMITIVE. At the time, some 109 years ago, about the ONLY practical means of using this new communications medium called "radio" (later description) was by ON-OFF KEYING. Since this landline morse code was then mature, past the 50-year mark, and had spread throughout most of the earth, is was practical to ADAPT it for radio communication. ADAPTATION is all that it was, not some "magick" conjured up by techno-wizards of the century before last.

That "many used it" in the latter half of the 1800s is more due to it being BETTER THAN WHAT WAS USED FOR COMMUNICATIONS BEFORE. The ONLY other means of instantaneous communications farther than audible means was optical, by semaphore vanes or flags, those being rendered ineffective by bad weather occluding the optical path. The Morse-Vail Telegraph System, patented largely through the "relay" part of their invention, was practical (for its time) and "efficient" (relative only to all other means of very-fast communications) despite an enormous (then) infrastructure of WIRE...wire that had to be strung on poles above ground due to as-yet undeveloped long-lasting insulation material. Expense was large for this infrastructure then but, the public it served was willing to pay for services rendered. It was BETTER THAN WHAT WAS USED FOR COMMUNICATIONS BEFORE. As the Morse-Vail Telegraph System spread throughout the globe, a great many operators became proficient in this "morsemanship" skill. The period of 1844 to 1896 encompasses nearly three generations of "operators." That is certainly sufficient time to develop a set of skills on par with any other craft of that time, but a specialized one. It has no qualifications of being "better than"

or "lesser than" any other skill of humans then.

What did the Morse-Vail Telegraph System displace? The various optical means used in Europe and Great Britain, all of which required a heavy burden of infrastructure support. The horseback courier, a most common means of surface communications well before the overly-storied Pony Express (a short-lived system). The common paper letter postal system in part, those postings being carried by any means available. The then-cheap Morse-Vail Telegraph could reach about 100 miles maximum for a single circuit of one operator at each end. A much more expensive version (through underwater cable) could increase that distance ten times, but at only a slight reduction in throughput (rate of communications transmission)...still faster than by ship surface transport. The telegraph was BETTER THAN WHAT WAS USED BEFORE.

Enter "radio" as demonstrated in Italy and Russia in 1896. It was telegraphy WITHOUT wires. No expensive infrastructure of wires on poles and the unattended relay stations, no squabbles over rights-of-way of the telegraph lines. Even better, it could be used on water! The maritime world loved it...it was something THEY NEVER HAD BEFORE...a means of instant communications BEYOND the horizon! Incredible invention embraced whole-heartedly by navies and deep-water shipping then. A miracle of the times. RADIOTELEGRAPHY WAS BETTER THAN WHAT WAS USED BEFORE.

However, all was not as wonderful with land-based telegraphy at the turn of the last century. Manual telegraphy itself was being displaced, replaced by the PRINTING telegraph, the teleprinter. Teleprinter circuits were as long as the manual telegraph circuits, still required the wire-pole infrastructure, but the specialist telegrapher was NOT NEEDED at each end. The native written language was conveyed directly, could be read by any literate person, no need for translation into dots and dashes to send, then re-translation back to the written language on receipt. Telegraphers were being "downsized," displaced by something BETTER THAN WHAT WAS USED BEFORE.

Manual telegraphers turned to this new "radio." They could use their skills and craft in a new medium with minimal adaptation. The technology of "electronics" was then sufficiently primitive that the manual telegrapher specialist could generally learn this new "technology" and to operate the primitive controls. Early radio was a godsend to the displaced telegrapher specialist.

However, technology did not stop with this magical new means of communication. The invention of the vacuum tube now made radio of far greater sensitivity, thus longer range, clean power amplification in transmitters, and it enabled VOICE transmission! Voice, nearly as clear as the land-line telephone, instantaneous, understandable to anyone speaking the language. New modes of

communication opened up. The land-line teleprinter was adapted
for use over radio. Those new modes were BETTER THAN WHAT WAS
USED BEFORE (radiotelegraphy).

"Radio" has been in CONTINUAL EVOLUTION over its quite-short
lifespan barely over a century of time. Those who worship the
beginnings of anything may embrace the first mode of radio,
telegraphy, but that is solely on emotional, subjective terms.
Radiotelegraphy came about ONLY because the on-off nature of
telegraph transmission was suited to the primitive technology
of ealy radio. EVOLUTION is a natural course of events, a
sort of "Darwinism" applied to technology, humankind adopting
what is BETTER THAN USED BEFORE.

> Bicycles are also "old technology," but that does not
> invalidate them as a simple and reliable means of transportation.

The general sublect of TRANSPORT is not involved in WT Docket
05-235. In the subject of transport, HORSES were used as a
simple and reliable means of transportation for CENTURIES
before the evolution of metalworking and machinery made the
bicycle possible. See two-wheeled chariots of the Roman
Empire time, centuries past, all "powered" by horses.

> A large fraction of humanity uses them, because they
> do not have the luxury of expensive automobiles and gas.

Horses can graze off the land, avoiding cost of feed. They
can also reproduce themselves, thus avoiding costs of
manufacturing.

> Continuing within the context of such a society
> (or what an more wealthy society can certainly become,
> as anyone in South Africa can tell you):
> One must practice and develop skill in using a bicycle,
> if he wants to get around faster than walking.

In trying to get back to "radio," the invention of the manually
wound spring generator radio receiver happened in South Africa.

For that matter, while few written records exist to verify it,
middle Africa had the "jungle telegraph" of drum rhythm
representation of spoken native languages for centuries...

> If one is unwilling to do the work and take the occasional
> fall needed to become a proficient bicycle rider,
> then they must accept walking.

Not a problem. Walking is as natural to humans as speech.
We learn that as infants and progress in such things as we
grow up.

> It is foolish and futile
> for those who have chosen to walk

> to curse those riding bicycles and the bicycles themselves.

[that's beginning to sound like some Sunday School morality
lesson...:-) ]

Is anyone "cursing" riding bicycles? Other than on streets,
that is? I think not. The parable of the bicycle is overdone.

> It is also foolish and short-sighted to take for granted that,
> once one has an SUV, that the need to ride a bicycle
> will never come again.

While I've never driven an SUV nor do I own a bicycle, I was as
fully qualified to drive an ancient "SUV" called the "Jeep" plus
the "three-quarter-ton" truck and "deuce-and-a-half" (2 1/2 ton)
truck in the military...as carrying a 70-pound field pack with a
AN/PRC-6 handheld transceiver and personal weapon in the Army.

I have never "sat" a horse nor do I intend to, yet horses have
been used for human transport for centuries. [there are more
horses in all of southern California than there are in the country
of Sweden...as my late father used to remark with some humor]
I do not venerate horses - which were there and used LONG before
the bicycle - but can appreciate the feelings of horse lovers.

> On such a day,
> If *all* have forgotten how to ride,
> than all of us shall walk.

Not a problem. Walking is fine, healthy personal transport.

> If even a few are rewarded for remembering how to ride,
> they can teach the many.

"Always begin with the left foot" is a basic instruction in
military close-order drill. Not a problem. :-)

I must have learned walking as an infant, not remembering
the empirical data derivation method of self-teaching since
it has always been very natural. Humans ARE capable of
self-learning a great many things.

>2. Historic preservation.
> There are some who place no value on spending assets to
> preserve touch-stones of humanity's progress.

I support the IEEE History section and regularly receive their
bulletin/newsletter (containing "Static from the Editor"
editorials). Marconi and Popov are given their rightful
place in electronics history as are all the greats, the
innovators, the inventors, the true pioneers of the electronics
world such as James Clerk Maxwell and Heinrich Hertz and
Lee de Forest and Edwin Armstrong (the troubled genius) and
many, many others.

> Most of us do, which is why we spend money and labor
> preserving "obsolete" ships, aircraft, telephones,
> steam engines, etc. All of them take money and work
> to preserve. Morse Code has been at least as important
> as the development of the telephone, radio and even
> the internet, having been the first "real-time" means
> of knitting-together the globe.

I prefer the Morse-Vail Telegraph System rather than just
the manual telegraphic code used ON it. Without the "relay"
of that invention, it would bave been limited to relatively
short distances on land.

> I submit that is a
> valid reason to incentivize its preservation,
> and that my proposal is an inexpensive, efficient
> and reasonable means of doing so.

The Federal Communications Commission is NOT chartered by law
of Congress as a "historical preservation agency." There
ALREADY exist a number of museums containing artifacts and
recorded history of telegraphy all over the world. There exist
at least a half dozen computer programs that permit self-learning
of cognition of the "morse code' sound patterns, three of which
are in use at the Military Intelligence School at Fort Huachuca,
AZ, to train military intercept operators.

I see NONE of that "incentivization" as being ANY reason for
the retention of a Living Museum of Archaic Radiotelegraphy
through federally-required radio operator licensing, commercial
or amateur. I see the above as merely a desperate attempt to
preserve a purely personal desire for a mode which is evolving
out of practical existance...and has done so in every other civil
radio service in the United States of America.

Much of the "incentivization" by others on WT Docket 05-235
has been nothing more than transparent rationalization of their
desire to maintain their PERSONAL rank-status-privileges, to
keep the status as much quo as possible out of fear that
changes in regulations will reduce their rank and status. May
be fine for a clubhouse environment but NOT for federal laws
and regulations applicable to ALL citizens.

bit bat

You are quite right in your suspicions, Frank.

You will note that Robeson, when challenged, will immediately go
into deliberate misdirection with his hyena laughter or the
accusations of some sort of personal perfidy. It's almost SOP
for him.

>>> After parsing your posts I got suspicious because you revealed some
>>> details but nothing verifiable -- almost like you were very careful

More SOP responses from Robeson. He avoids the direct response,
trying to imply that anyone who challenges him is a "fool" or
worse. It's an old tactic in pubs-newsgroup word warfare. :-(

>I'm not worried about my credibility. On the contrary, -you- have yet
>to give a direct answer to any specific question regarding your cruise
>in the USMC.

Robeson has only ONCE made ANY reference to radio or electronic
equipment name, nomenclature, or familiar name. That one time
was in regards to MARS radio equipments. Eighteen years as an
avionics MOS and he can't name a single piece of equipment by
formal or familiar name? Unheard of in my service days, in my
work, including field trips to the military installations and
being around servicemen IN radio-electronics.

Earlier on, Robeson tried to avoid naming anything by stating
"he couldn't give away any secrets." A rather stupid remark in
iteself since the NAMES of radio-electronics equipment has NOT
been secret, has been published in Defense Electronics trade
magazine, been on the various branches' procurement IFBs
(Invitation For Bid), government reports, and so forth. Their
names, general function, all have been on public documents
for a half century. Brochures and pamphlets have been released
for publication about many forms of communications, done by
military units themselves...one of which is the main part of:

http://kauko.hallikainen.org/history/equipment/stations/alphabetsoup.pdf

Robeson couldn't even name the very common all-service small-unit
radio of his early time, the AN/PRC-25 or PRC-77. Only an eighth
of a million of those two types were produced. He couldn't recall
a single airborne radio name, not even the venerable AN/ARC-27
(before his time, really) or the (after his time) AN/ARC-210.
He didn't know the SINCGARS family of all-service small-unit
radios even though a quarter million sets were produced between
1989 and 2004. Radios. Military radios. "Not known" by someone
who had been in the Corps for 18 years, claiming to be "in"

radio communications? Highly unlikely. None of the "military radio experience" posters in here knew the military designation of the Collins KWM-2 transceiver, often used in MARS operations in Vietnam. A ham, an Extra, who isn't familiar with Collins Radios? Highly unlikely.

In much earlier newsgroup postings, Robeson stated he had a medical discharge to explain not completing a full 20 years, "due to an accident." Then, after several days, he changed that to "honorable" claiming it was "changed later" by some unspecified authority. Medical discharges are given for a variety of reasons, not always due to physical disabilities. [that's in Google archives]

Robeson has consistently tried to make fun of others' military assignments, claiming his (classic) been in "seven hostile actions." First of all servicemenbers don't have any choice of what they do, they go and do whatever they are assigned, wherever commanded. Only one out of about seven military land forces, Army or Marines, are IN any combat zone or actual fighting territory during a "hostile action." Second, Robeson has NEVER DEFINED HIS "hostile action" in any specifics as to WHEN and WHERE. He has glossed it over in generalities "explaining" that he "knows it and need not explain it to us." He usually remarks that HE has the "documentation" for it but it remains unseen by the rest of us. He postures and preens, implies greatness but without details. In other words, BS.

A classic case of Robeson's word-twisting is his "dishonoring" charge that I "embellish my military career" by honoring the 19 members of my Signal Battalion killed in a transport crash on 1 July 1950, three years before I was assigned to that Battalion. "My" battalion lost 4 more afterwards. I have a list of all those names, even their ASNs (Army Serial Numbers) and honor them especially every Memorial Day when I join other veterans in Memorial Day ceremonies, even for simple things like putting flags on their gravesites. That sort of word-twisting has become common to Robeson's postings in here, an extreme sensitivity (or volatility) to anything negative against his words spat out in a flurry of personal insults.

Take his use of the word "Putz" above his message signatures. He isn't of a Yiddish ethnic group, isn't a Jew, yet he uses a Yiddish pejorative freely as if he were. [as a pejorative it means "penis head" in reference to one who can only think with his penis] That four-letter word is "acceptible" yet if another poster is quoted using four-letter words they are octothorped-out (the octothorpe or # symbol replacing the letters). This fierce warrior, self-promoted "seven hostile action" implied hero can't even swear like a Marine among other veterans? Highly unlikely. :-)

Phrases and euphemisms identified with the USMC are easy to get in literature and from TV and movies (tons of that material). Using such things is also easy enough to do...in generalities. Imposters slip up when confronted with DETAILS or specific-time/era-use phrases that weren't familiar to the pharse-user's time. Robeson is big on generalities, very short on specifics.

Robeson wants to be a Big Name. Any which way he can. He is military-minded, with any photo of him on the 'web IN UNIFORM of some sort, green scrubs to CAP-patched flight suit. He is an amateur extra, yet never worked IN military radio comms. He bragged of having a civilian private pilot's license before joining the Corps yet never became Air Crew in the Corps. He uses phrases like "pilot in command" of a general aviation single-engine aircraft like he was the commander of a 747. :-)

He gets what he probably wanted all the time - ATTENTION. He manages to cuss out every one of his opponents in any thread, turning that thread into a running battle of Stebie FIGHTS The World...heaping abuse on his "opponents" as if his life depends on it. Maybe it does.

Don't forget the "...just a few ounces of pressure" classic, or
"I will be up your way soon [and confront you]" impled threat, or
"I only have to pick up a phone and my authority will have you
picked up!" (which I think is the topper of them all).

Maybe we could get the producers of "CSI" to do a special episode
on the resolution of all this? Get him on the stainless steel

"bed" and do a Y-cut to check his innards? Or maybe the Home and Garden TV Channel for a special Lawn Order show? :-)

[I find more entertainment in watching my hard disk defrag...:-) ]

What amazes me is how he can sit there and make all these unwarranted assumptions. Example; TS clearance. Does he think he is the only one in the world that had a TS clearance?

I was a COMMO NCOIC. Does he think I didn't get a Security Clearance?

Yep...he is a PUTZ.

Dan:

At this point, all I see which has been "proved" is that in humanity there is a need to set ones own image as being "special", the things they use as as qualifications to these ends are preposterous--even resorting to flashing a hobby license at you in pursuit of those ends...

... grab a chair and view this "circus" of performers out there, and just to think, they have no clue on the opinions of others viewing them in their silly performances... indeed, even if you attempt to explain it to them, it just doesn't make it though that image they have constructed for themselves.

It is much like watching a "lotus blossom eater" and unable to fathom what visions must dance before their eyes obscuring the reality which lies about them... the term "glorified CB'ers" pops to the forefront of ones mind...

"Fondness" is a bit strong for me... :-)

A GOOD tall tale is fun. Too many tales in one place and you've
got a conclave of coders.

> Secret agent types who the gov't has
>hidden away in secret and strategic positions on this planet--posing under
>the guise of amateur radio operators with hobby permits...

In an "undisclosed location" (next door to Dick Cheney).

Ready and waiting to SAVE THE WORLD from terrorists!!!

>Diabolical, don't ya think? Those stupid terrorists probably don't even
>have a clue!!!

Machiavellian in concept. :-)

Of course, those terrorists are already stupid, so the whole thing
is just a sequel to "Dumb and Dumber." :-)

Actually, I should stay with HGTV. I can drive over to the Media
Center studios (its on the same street as the Hill Street Cafe)
and talk to Carol Duvall on it. She could have all these cut-ups
on her Arts & Crafts show! Ah, something to do on Monday!

Has possibilities! :-)

...or a heroic cold warrior keeping the commies contained in
the Fulda Gap! :-)

John, you should have been here around 1997 or so and the
(unidentified) "reserve colonel" telling us all about how
"his son was 'behind the lines' in Iraq" during the First
Gulf War, "sending intelligence reports by morse code!"

In 1990-1991. NO military occupation specialties called for
radio ops with morsemanship skill training then. Besides,
the U.S. Army had the AN/PSC-3 that handled TEXT at 1200
BPS on the military aviation band of 225 to 400 MHz...with
capability to bounce off relay sats or to orbiting Joint
Stars aircraft for relay. Three antennas with that set, two
of them directional to avoid unfriendly DF on the position.
PSC-3 went obsolete soon after and the current model is PSC-7.

>> I was a COMMO NCOIC. Does he think I didn't get a Security Clearance?

Irrelevant. Thirty-one Charlies probably get the lowest level
now as they did for us back a half century ago...CONFIDENTIAL.

BFD. It's all paperwork, name and Confidential form goes
through a few agencies, is checked against computer listings
and that's that. Fail the Confidential check and it's OUT
of that MOS school into something else. The Uniform Code of
Military Justice rules all military.

Standard three levels, least sensitive to most sensitive, is:
Confidential, Secret, Top Secret. [the forms get longer, the
more sensitive the clearance...the FBI gets the fun task of
having to interview friends and family and neighbors for a
"Top"...which they grudgingly do] I've had them all. <shrug>
No big deal.

The FCC specifically FORBIDS ANY communication "intended to
obscure he meaning" in Part 97, Title 47 C.F.R.

Dannie has now become fascinated with my "Putz." We'll have
to wait and see what he do about dat. [strange stuff!]

put zen

You operated with the tacit approval of your "commanding officer".
Since you were only an enlisted guy, it might have gotten the pressure
off of you and onto him/her had the REAL authorites decided to say
something about it.

> David Heil/K8MN, worlds greatest DXer, claimed that a commanding

> just get it wrong so much of the time.

But not THIS time. Nor any other time that one of your rants has been involved. YOU just can't get it right. You were, for all intents and purposes, bootlegging. You got away with it, but it was bootlegging nonetheless. That's why T5/N0IMD cards are no good for DXCC purposes.

My I draw your obviously tainted opinon to SSGT selection board of
1983, Precendent number 60A. You may also refer to the Gunnery
Sergeant selection board of 1987. To be truthful, I forgot my
precedent number on that one but it was high due to the overlap with
the previous years promotions.

> And if you happen to doubt -my- service in the USMC...(SNIP)

No...but I doubt your understanding of the motto "Semper Fidelis".

I also question your motives in this forum. So far, nothing
relevent, other than catching the back of guys who are archived chronic
liars.

Len:

Just about the time these guys have me believing I accidentally stumbled into rec.radio.amateur.secret.agent, someone says something sane and I switch back to thinking I am still in rec.radio.amateur.policy--then it happens all over again...

I really suspect we are in rec.radio.amateur.merry.go.round...

... but I am afraid one of these guys will one day produce a "secret decoder ring" from the 1960's (and bestowed upon them from a god in a cheerio box), then the theme from the x-files will startup in the background, and I will feel, once again, like the carpet has been pulled beneath my feet--I hate when that happens! Usually when that happens, I see a vision of art bell and wayne greene discussing colloidal silver and burying locomotive piggy-back containers in your back yard to protect you from "The Big One!"

... course, once I remove the wool from over my eyes, things do start looking better ...

John

> worse. It's an old tactic in pubs-newsgroup word warfare.

Nope.

It's the "tactic" of truth. Mr Gilliland insinuates that I didn't
serve in the Marines because he allegedly spoke with a couple of "buds"
who are in the Air Wing. He furthermore drops the name of LtCol
Olivere North, and further insinuates he has significant resources at
his disposal that would, seemingly, indicate that I didn't serve.

Mr Gilliland is challenged to use those resources. Anything less,
assuming his suggestions are factual, is bufoonery.

I am still at a loss as to understand how Avionics nomenclatures
are relevent here...

> Earlier on, Robeson tried to avoid naming anything by stating
> "he couldn't give away any secrets."

Lennie, Lennie, Lennie...

WHY do you persist in perpetuating that lie?

Huge snip.

> Robeson couldn't even name the very common all-service small-unit
> radio of his early time...HUGE SNIP

No Lennie...

YOU ahve gone on about military radios in the Amateur forum...Then
you claim unwillingness to play your game equates to not "knowing" or
being familiar with same.

Sorry for you.

> In much earlier newsgroup postings, Robeson stated he had a

Lennie, your name belongs on a "wall of shame" somewhere for your
attempts to manipulate your actual duties with the sacrifices of the
guys who were KIA before you were even inducted.

> Take his use of the word "Putz" above his message signatures.
> He isn't of a Yiddish ethnic group, isn't a Jew, yet he uses
> a Yiddish pejorative freely as if he were.

So...Not being Jewish means I can't call a putz a putz?

Snipped Lennie's whining.

Nope. Just an individual.

> Any which way he can. He is
> military-minded, with any photo of him on the 'web IN UNIFORM
> of some sort, green scrubs to CAP-patched flight suit.

"Green scrubs"...?!?!

And please, Lennie, go ahead and tell us all about your experience
with CAP, also...

> He is an amateur extra, yet never worked IN military radio comms.

Yep, I did.

> He bragged of having a civilian private pilot's license
> before joining the Corps yet never became Air Crew in the Corps.

Ummmmmmmmmmm...there's LOT'S of guys in the Corps who hold a civilian airman's certificate but aren't aircrew. Did I miss something? I never say anything that said "those with an FAA certificate will be aircrew, period".

> He uses phrases like "pilot in command" of a general aviation
> single-engine aircraft like he was the commander of a 747.

Nope.

I use "pilot-in-command" like the FAA uses it in reference to anyone exercising thier airman's privileges.

Privileges, by the way, that you don't have.

> He gets what he probably wanted all the time - ATTENTION.

Excuse me...?!?!

Remind me why you're all-over a forum for an avocation you have expressed nothing but vile disrespect and contempt for...?!?!

> He manages to cuss out every one of his opponents in any thread...(SNIP)

Actually the profanity is yours, Markies, Toiddies, etc.

> (UNSNIP)...turning that thread into a running battle of Stebie FIGHTS
> The World...heaping abuse on his "opponents" as if his life
> depends on it. Maybe it does.

Uh huh...riiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiight.

Putz.

> >>

> See above

The band is 300 kHz wide. 50 kHz is 16%. There are plenty of
times - noncontest times - when 40 is one Morse Code signal
after another from 7000 to 7050. And that's with cascaded
8 pole 500 Hz filters in the rx.

> >> 20/15/10 could all use some "CW Trimming" today.

Is that what is best? More room for SSB and AM, less for
CW and digital modes?

FCC won't go for that. Read the NPRM - they specifically state that
they think 3 license classes is the right number, and that we'll
get to three classes by attrition. They specifically denied
auto-upgrades, new entry level licenses, etc.

They also said that more frequencies was the best incentive.

There should be, though. 15% or so of each band. I'm yet to see one
good reason not to do that.

It IS disconcerting! :-) But, those are the fantasies of the
Mighty Macho (Mutant?) Morsemen, dreaming under the headphones
and hearing signals that aren't there...

> Usually when that happens, I
>see a vision of art bell and wayne greene discussing colloidal silver and
>burying locomotive piggy-back containers in your back yard to protect you
>from "The Big One!"

Understood. However, from a practical point of view, those shipping
containers are quite practical for storage or even working on one's
hobbies. Riverside Convalescent Hospital in North Hollywood has one
for storage, tucked into the back of one parking lot. A Corvette
car restorer uses one to hold his in-work 'Vettes. Being all metal,
they would be excellent for amateur radio "shacks" pumping 2 gallons
into a "shack-top" antenna (big all-metal box is an excellent
ground plane/counterpoise). Of course, I'm a bit prejudiced because
this city carries the most sea freight on this coast and the U/S
(for sea use) containers are abundant. They need large trees and
bushes to hide their gargantuan rectangular shapes; esthetically
they are bad for a neighborhood if left uncovered. [yes, I know
Stockton carries a lot of sea freight also, but it ain't the size
of San Pedro - Long Beach harbor facilities]

>... course, once I remove the wool from over my eyes, things do start
>looking better ...

Coders are trying to pull STEEL wool over our eyes. Problem is,
they don't realize that their steel wool is all rusty and
unserviceable. They don't realize that the same wooly stuff
has been pulled on THEM by the wonderful olde-tymers of the
League (of Indistinguishable Gentlemen)(with apologies to Sean
Connery).

Excuse me while I get a cold drick from da fridge...it makes
nice code inside aw day log.

I wouldn't call it "small" -- those puppies get mighty heavy on a
forced march. A "small" radio would be the PRC-68. But the RT-841 (the
RT used for the PRC-77) was the bread and butter of ground radio comm.

<snip>

A medical discharge is an administrative, or "general", discharge
"under honorable conditions". They are not changed to "honorable"
unless there were mitigating circumstances that led to the original
discharge being incorrect. But there is no way he would have been
granted retirement benefits without serving the full 20 years. (And
BTW, the rank of Gy.Sgt. is pretty low for retired enlisted.)

> Robeson has consistently tried to make fun of others' military

I can't find that post.

> First of all servicemenbers don't have any choice
> of what they do, they go and do whatever they are assigned,

Upon completion of MOS training, some are allowed to request a
particular duty station at first. Sometimes that request is granted.
After that it's a crap shoot.

<snip>
> This fierce warrior, self-promoted "seven hostile

I got to fly a Huey for about 5 seconds, then the pilot pulled us out
of the spin. I've heard it said that flying a helicopter is like
roller-skating on a greased bowling ball. I agree.

so your issue is one that the robot doesn't do a good enough job of
listening

>
> How much of a listen is long enough, and on how much on either
> side of the frequency?

Isn't pactor relitively wide compared to CW and PSK 31? so if they are
lsitening across thier bandwidth they should detect a signal wether
they can read or not

and how long would satify you?

> >
> > A human operator causing QRM is either lousy operating practice > or an accident, a robot blindly causing QRM via it's inherent
> > design is illegal.
>
> There's also the 24/7 nature of the robots.

Why is this a problem? indeed if they are doing thiss al thetime then
you could avoid them esierly enough

again if the they are lsitening
>
> > One solution might be to come up with a robot which tunes
> > around it's frequency before transmitting.
>
> Yup. And maybe sends "QRL?" in Morse Code before it opens up.

why should it favor Morse code over PSK 31?

>

and today things seem to go enough without specail licenses

Why should Morse Code receive specail breaks that PSK 31 and RTTY don't
get?

>
> But VHF/UHF coverage is fairly predictable and consistent. A

> station can cover millions of square miles.

that is the story you folks tell gues you haven't dealt with 6M
repeaters and the coverage is more viable than I think you accept Jim,
althought they are generaly smaller than HF I grant you

>
> The "regulation by bandwidth" proposal has some good basic

Indeed I am not certain why everyone is keying in this discussion on
the ARRL's regualtion by bandwidth proposal or is there only a real
problem with pactor when that proposal is discussed

I think you referred to yellow footprints in an earlier post. That's
interesting since I didn't even remember they were yellow until I
looked in my boot camp 'yearbook'. After that I started remembering
all kinds of things about receiving, like the lines on the floor, the
overwhelming smell of brasso and dura-glit, and blood on the shower
room floor because some of those guys didn't even know how to shave.

<snip>

What you can't understand is that we all know the public DOD files
only have the name, rank, service, MOS, and sometimes the hometown.
That's far from a definitive identification since anyone with the same
name can 'steal' that serviceman's identity and make up the rest. Like
when someone writes me a check and I go to their bank to cash it. I
stand there with a camera in my face while they ask me for two pieces
of ID and a thumbprint. One day I asked them how they can verify that
I'm the same Frank Gilliland to whom the check was written (since
there are at least three of us in this town). After a Bush-long pause
the teller finally admitted that he couldn't make that distinction.

Duh.

>give it to you off-group. I've explained my reasons for doing so.

And I questioned why your military service is so secret. That's why I
alluded to "Col. Vinson at Ft. Gordon", which you obviously didn't
understand but should have. You can email -me- if you want but don't
expect me to keep anything you say quiet if you fail to verify your
story.

> It's the "tactic" of truth. Mr Gilliland insinuates that I didn't
>serve in the Marines

Wrong. I didn't "insinuate" anything -- I made a clear and blunt
accusation that you are lying about your military service because you
have consistently refused to provide anything substantial to back up
your claims.

> because he allegedly spoke with a couple of "buds"
>who are in the Air Wing.

Wrong again. I didn't say they were in the "Air Wing", although I did
know a few Marines that were stationed at Cherry Point (just a stone's
throw from Geiger -- we used to hang out at the Second Front area).

> He furthermore drops the name of LtCol
>Olivere North, and further insinuates he has significant resources at
>his disposal that would, seemingly, indicate that I didn't serve.

I think his name is Oliver, not Olivere. And again, I didn't
"insinuate" that I have any more resources than you -- just that there
are more resources available to -both- of us than you might realize.

> Mr Gilliland is challenged to use those resources. Anything less,
>assuming his suggestions are factual, is bufoonery.

It appears that, for several years, -you- have been challenged to
support your claims about your military service. That pretty much
makes -you- the bufoon.

>> >I'm not worried about my credibility. On the contrary, -you- have yet
>> >to give a direct answer to any specific question regarding your cruise
>> >in the USMC.
>>

>
> I am still at a loss as to understand how Avionics nomenclatures
>are relevent here...

Because someone with the experience you claim would have intimate
familiarity with the equipment. You have failed to demonstrate -any-
such familiarity -at all-.

<snip>
> No...YOU implied "greatness". I only acknowledged that I had the
>misfortune of being in places where we got shot at.

Philly? Or just a few field ops?

I'll tell you what a "hostile action" is, Steve: First of all, it's in
a place where the Holiday Inn is pocked full of holes ranging in size
from .22 caliber to whatever an RPG can do in concrete. It's when you
sew a target (the US flag) on your shoulder and stroll through a
country in the midst of a chaotic civil war, occupied by peoples that
are mortal enemies, most of whom hate Americans and have bigger guns
than you. It's when you shoot strangers but don't care because your
adrenalin is flowing too heavy to think about your actions. It's when
the air is thick with the smell of gunpowder and rotting flesh.

So Steve..... how does an avionics tech wind up in not just one but
-seven- such predicaments?

>> In other words, BS.
>
> Nope. I just don't discuss military duties here.

You have already discussed your military service here so that excuse
is moot. Try again.

John,

I don't disagree ... there are applications (CAD programs and others) that I
*must* use, and running dual-boot and having to shift back and forth and not
have "everything in one place" is just too annoying for me.

I had a Linux box running Fedora Core, but had to repurpose it for something
else and haven't gotten a new machine yet to run Linux on ... but I will.

Jim, et al,

I don't think that unattended stations should be allowed to "set up camp"
anywhere they choose in the HF bands ... at least until someont *proves(
that they have solved the QRM problems that such stations can and do cause
do to the "hidden terminal" problem.

For now, at least, I think the only reasonable solution is to confine them
to a (reasonably sized - YMMV on what that means and I would need more data
on the "requirements" to pick a number) sub-band so that the machines don't
pound the human operators into submission with their (effectively)
relentless attempts to get a message through. (Let them figure out how to
"play nice" with the other machines first ...)

> Should ARRL endorse/standardize/push modes requiring the
> purchase of proprietary hardware and software from specific
> providers?

I do not believe so ... I think that proprietary modulation techniques and
protocols are "bad" for several reasons:
1) It locks out the expermenters who could, in an "open source" model
provide enhancements, additional features, etc.
2) It prevents people from building their own compatible unit if the want to
and have the necessary level of technical knowledge and skill
3) The lack of competition amongst vendors of compatible hardware
artificially inflates prices to the detriment of the user community.
(I am big on "open consensus standards" - something I do in IEEE 802.)

Carl:

Slackware has zipslack, and if my understanding is correct, you can boot
it right off windows and go into linux, when done with zipslack, you just
terminate like any other app...

I am sure you also know about wine and you can run most any windows
software on the linux boxes with it...

I have never toyed with zipslack even though I have a bunch of zip drives
here, and I think you can install zipslack on any spare partition (or hd)
you have... I run slack 9 with an updated 2.6 kernel...

That would fit most hams who are windows only users, but wish to run a
open source linux app or two for some experimentation...

> regs and is the crux of the problem.

Brian,

Most of the "robots" *do* (at least make an attempt to) listen before transmitting ... however the vagaries of propagation and the highly dynamic nature of usage in the HF bands cause a serious "hidden terminal" problem and that results in interference (it's unintentional, but still there - and it happens more with "robots" because their "listen before talk" is not as effective as a human sending "Is the frequency in use" and being appropriately patient before blasting away).

> A human operator causing QRM is either lousy operating practice or an
> accident, a robot blindly causing QRM via it's inherent design is
> illegal. One solution might be to come up with a robot which tunes
> around it's frequency before transmitting. There's one for you
> code-writers to chew on.

Solving the hidden terminal problem on HF for automated stations is a difficult nut to crack ... in addition to the propagation issues and the dynamics of usage, there are so many modes that a "robot" would have to sense/detect/recognize to optimize the "clear channel assessment" and it would have to do it quasi-continuously ... I'm not saying that it's a permanently insoluble problem, but for now the mechanisms aren't up to the level that's needed.

My working group, IEEE P802.22, (http://www.ieee802.org/22) is working on "cognitive radio," but in response to the FCC's NPRM on license-exempt devices using geographically unused TV channels ... this situation makes the "incumbent detection/avoidance/protection" a more soluble problem because there are a limited number of incumbents, they are high power transmitters

at generally fixed, stable locations, they use the same standards (NTSC, which will be going away, and ATSC the new digital TV standard), the spectral characteristics of their transmissions have "features" that are easily detectable (the NTSC carriers or the DTV "pilot carrier"), etc.

However the "detect and avoid" problem becomes much more difficult in an environment with many lower powered stations that come and go, whose locations vary, and who use a wide variety of different modulation techniques ... again, these problems will likely be solved in the future, but we're not there yet.

> 73 de Jim, N2EY

I agree completely ... If I am elected to the ARRL Board, I will work with the various interest groups to find ways to modify the proposal so that it will better address the issues and concerns that have been voiced. It will require some reasonable compromise to arrive a plan that at least a significant majority of people can accept. It's probably totally unrealistic to believe that it's possible to please 100% of the ham population, but the goal should be to achieve a MUCH broader consensus. If a preponderance of hams from the various interest groups can say "It's not perfect in my ideal world, but I can sign up for that." we've probably reached the best possible solution.

We're not there yet ...

>Unambiguous opinions (95.3% of all filings)

Somehow that just isn't getting through to the coders. They
just can't understand that the NCTA are sick and tired of
that code test as some kind of "maintainer of a living
museum of morsemanship." The NCTA are in the MAJORITY, no
ifs, ands, buts, or conditionals.

>You'll always have your EXTRA Jims in the ARS.

I'm sure. They see themselves as "an elite force" or whatever.

>> The IARU, helped/nudged/influenced by international membership

I don't believe that "King of Jordan request of Papa Bush".

Yurp had the "T-hams" well before 1990. The movement to
eliminate the code test has beginning to gather momentum
in 1980, a decade before.

>> Also conventiently omitted is EIGHTEEN Petitions, nearly all

Once NPRM 05-143 is included in the Federal Register (it wasn't
up to last Friday), the floodgates may be opened. Mondays always
have the most documents received; so far nothing has appeared on
Saturdays or Sundays. The 458 Comments of 8 August 2005 was a
veritable deluge.

Wait a cotton-pickin' minute here ... there are MANY of us who hold extra class licenses who don't treat other hams that way.

In my travels around the Atlantic Division to club meetings and hamfests, I have not had a SINGLE person insist that the code test MUST remain.

(Some, but VERY few, have expressed a *mild* personal preference for keeping the 5 wpm for the extra only, but have indicated that they aren't going to "get their skivies in a bunch" if the FCC eliminates ALL code testing. The VAST majority have said, something along the lines of either "I don't use CW myself and I think it's high time the test was eliminated." or "I like to use CW, but it's time for the test to go so we can get more people (particularly kids) involved in ham radio so there are hams remaining when we're gone.")

Dan ... at last we agree!!!!!!

We *MUST* eliminate this "I'm better than you because (pick one of the following, or any other reason ... "I have a higher class license." or "I passed an xx wpm Morse test.") - class warfare.

We are ALL hams ... period. Some are more experienced. They SHOULD be Elmering (and Elmering doesn't mean "browbeating them into your personal preferences") the newbies and HELPING them to learn (whatever they want to) about ham radio, rather than "dising" them and treating them like dirt.

This stuff has GOT to stop!

Then your claim to have the resources you allege is fraudulent.

I've given you (and others here) more than enough to determine
that my "claim" of having served in the United States Marine Corps is
valid.

> > because he allegedly spoke with a couple of "buds"
> >who are in the Air Wing.
>
> Wrong again. I didn't say they were in the "Air Wing", although I did

You said they were in Avionics.

So...How many Avionics Technicians do fleet units have, Frank?

> > He furthermore drops the name of LtCol
> >Olivere North, and further insinuates he has significant resources at
> >his disposal that would, seemingly, indicate that I didn't serve.

Excuse me.

> And again, I didn't
> "insinuate" that I have any more resources than you -- just that there
> are more resources available to -both- of us than you might realize.

It doesn't matter if you happen to be sleeping with a records
clerk at HQMC.

You HAVE alleged to have these resources, yet obviously haven't
used them.

> > Mr Gilliland is challenged to use those resources. Anything less,
> >assuming his suggestions are factual, is bufoonery.
>
> It appears that, for several years, -you- have been challenged to
> support your claims about your military service. That pretty much
> makes -you- the bufoon.

Hardly.

I've been asked to provide specifics. I've provided more than
enough. I can't (won't) give my service number as it was also my SSN.
So you now have my last grade, my MOS fields, and even the dates of my
two SNCO selection boards. A quick perusal of "Navy Times" archives
with Selection Board result will, at the very least, verify my having
served.

That you care to "diss" the rest is irrelevent.

> >> >I'm not worried about my credibility. On the contrary, -you- have yet

Thankfully I never had to do that.

> It's when you shoot strangers but don't care because your
> adrenalin is flowing too heavy to think about your actions. It's when
> the air is thick with the smell of gunpowder and rotting flesh.

Sounds very Clancyesque.

> So Steve..... how does an avionics tech wind up in not just one but
> -seven- such predicaments?

Because Marines do more than what their MOS suggests.

> >> In other words, BS.
> >
> > Nope. I just don't discuss military duties here.
>
>
> You have already discussed your military service here so that excuse
> is moot. Try again.

Nope.

As much as anyone else here, "Frank", you have more than enough
information to validate my service, assuming your insinuations of
intimacy with such notables as LtCol North are accurate.

As I have found with OTHERS here, even when you DO give specifics,
the pat answer is "So, we just accept it because you say so?" , and
it's "just one more thing" to add to the flame war. It doesn't matter
how objective or reliable the corroborating source is.

I also notice you snipped the line where I suggested you e mail me
directly and I'd provide more than enough information, off group. You
didn't even take the time to answer it HERE, let alone privately.

This leads me to believe that it's most likely that if you did and I research the headers, we'll find some close relationship between you and one of the Infamous Four.

Lastly, I find it curious (and certainly lends significant credence to doubting you and YOUR stories...) that you show up from no where in an Amateur Radio forum, CLAIM to be a former Marine with impeccable "references", yet have absolutely nothing to say ABOUT Amateur Radio policy.

Add that to language in your posts that sounds hauntingly like Lennie Anderson and I'd say your accusations of fraud belong in your own lap.

Steve, K4YZ

You claim you need not treat MY callsign with respect

I promised that I would contiue to mangle your callsign until you apologize, which is likely to be forever since you don't take responiblity for your actions

You just blame others

>
> In short...You're the liar, bully and abuser you claim others,

> intimacy with such notables as LtCol North are accurate.

Not realy

without the SSN which you wisely choose not to provide you can't verify
much of anything, esp with a name like yours

You may simply pick out those dates of the selection boards of someone
else
>
> As I have found with OTHERS here, even when you DO give specifics,

>
++++++++++++

That's three times you have misrepresented my statements. If you are
going to mount a defensive argument then at least stick to the facts.
Otherwise you are just validating everything others here are saying
about you.

> So...How many Avionics Technicians do fleet units have, Frank?

Quite a few. Back when I was active, the three batallions of the 8th
regiment were rotated into the 22nd and 24th MAUs. I was deployed with
the 24th MAU on The USS Nassau. This ship is an LHA -- basically it's
a small aircraft carrier with a massive well deck. It can accomodate a
lot of different aircraft including the Cobra, Huey, CH-46, CH-53,
OV-10 and Harrier. Being a Marine in the avionics field you should
have already known this. In fact, if you -were- USMC for 18 years it's
more than likey that you would had served aboard an LHA or a similar
amphibious assault ship. Either way you would have known of both their
existence and their capabilities.

Or was that just a rhetorical question?

>> > He furthermore drops the name of LtCol

>clerk at HQMC.
>
> You HAVE alleged to have these resources,

Yet another misrepresentation.

> yet obviously haven't
>used them.

The DOD records are available at www.military.com. There was indeed a
Steve Robeson, USMC, E-7, and in avionics. But you have yet to prove
that you are him.

>> > Mr Gilliland is challenged to use those resources. Anything less,

>
> You don't know what an RPG can do to concrete?

Depends on the concrete. Hit a weak spot and it makes a big fucking
hole that you can walk through. Hit some of that steel-reinforced
high-grade stuff and it just skins the surface down to the rebar. You
could see both on the South wall.

>> It's when you

>
> Sounds very Clancyesque.

No, it's very horrific. And I'm not suprised that you equate war with
popular fiction -- most civilians do.

>> So Steve..... how does an avionics tech wind up in not just one but
>> -seven- such predicaments?
>
> Because Marines do more than what their MOS suggests.

Ah yes, the scullery! Lot's of action there, but nobody shooting at
you. Maybe working the butts at the rifle range.... now -there's-
something that fits your definition of "hostile action". So you
qualified seven times in 18 years..... that's about right.

>> >> In other words, BS.
>> >
>> > Nope. I just don't discuss military duties here.
>>
>>

Looks to me like I did NOT snip that part of your post; in fact, I
even REPLIED to it. You, however, did -not- reply. Regardless, I will
snip no more messages if that makes you happy. And there's nothing
that prevented you from e-mailing me first.

> This leads me to believe that it's most likely that if you did and
>I research the headers, we'll find some close relationship between you
>and one of the Infamous Four.

.....uh-oh, here come the paranoia police!

> Lastly, I find it curious (and certainly lends significant
>credence to doubting you and YOUR stories...) that you show up from no
>where in an Amateur Radio forum, CLAIM to be a former Marine with
>impeccable "references",

Who said my references were "impeccable"? Not me. I wasn't exactly the
'model Marine'. Heck, I was suprised when they promoted me back to PFC
(for the third time) just a month before I was discharged. Enough with
your misrepresentations, Steve.

> yet have absolutely nothing to say ABOUT
>Amateur Radio policy.

Sure I do. Wanna hear what I have to say about the service in general
or about the few cronies that screw it up?

> Add that to language in your posts that sounds hauntingly like
>Lennie Anderson and I'd say your accusations of fraud belong in your
>own lap.

And all your ranting has done nothing to resolve the topic of this
discussion. If you can think of anything that would make me believe
that you were in the USMC then feel free to speak up. Otherwise, it
looks like you are just stalling -- making excuses, obfuscating,
changing topics -- in hopes that I'll give up and leave.

# 2605. Past Gems from Candidate Carl

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-22 05:44:49 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <lDdOe.9299$Wi6.7021@newsread2.news.pas.earthlink.net>
Source record: 116956

Carl Stevenson 1997

"We'd be better off if we could, instead, find a way to reeducate the whining olde fartz ... those whose knowledge of radio is frozen in the 30s and 40s somewhere don't deserve their licenses today, no matter how fast they can beep ..."

Carl Stevenson 1998:

"The majority of the opposition is, IMNSHO, based on people's experiences with "frequency coordinators" who warehouse frequencies for private repeaters for their cronies and an ARRL which is totally out of touch with today's world, tries at every turn to thwart progress in favor of the status quo of stagnancy and decay, and could care less what the majority of hams feel or believe."

"In a word, 'bullshit,' Ed ... it's just that the majority of hams who are not ARRL members (and even many of us who ARE) know full-well how the good-old-boy politics of the ARRL work and have seen this type of move coming for some time."

" More BS, Ed ... the ARRL's sleazy attempt at end-run regulation speaks volumes about the ARRL."

"I freely admit my bias against current (counting the past few decades) ARRL policy and current 'leadership.' I am by no means a 'lone wolf' in holding this opinion."

Carl Stevenson 1999:

"I don't think we should establish 'protected class' setasides for ANY legacy technology ... "

Carl's race for the Atlantic Division Directorship should be interesting at the very least. Should he actually get elected, I'm sure the seasoned veterans of the League will welcome him with open arms.

I realize that the things are advertsied as "listening before
transmitting" but from any practical point of view they simply don't to
any even half-decent extent, they're deaf as rocks. It's just
advertising hype.

> would have to do it quasi-continuously ...

Depends on how "optimum" is good enough to get the basic job done well
enough within the Part 97 hobby spectrum. I don't see why it would be
necessary for the algorithms to actually decode any of the modulations,
all they need to do is tune up & down 500Hz or so from their center
freq and sum the total level of signal activity/energy over some
reasonable short period of time vs. some threshold and make the
decision to transmit or not. Nor do I see why they should have to
listen continuously either. Once an acceptably intelligent robot
decides the freq is "clear enough" it's *his* and the devil can take
the hindmost. Which is exactly what human ops do.

As far as optimization goes how many times have you watched a
development effort die because the engineers hung too much gold plate

on it?

> I'm not saying that it's a
> permanently insoluble problem, but for now the mechanisms aren't up to the
> level that's needed.

Mmmm . . I dunno . . I'm working on a project right now which is giving
me a good look at what neural network technology can do these days and
it's pretty impressive and it's not just academic pushups, it's fully
commercialized. I can easily visualize even simplistic implementations
of NNT giving robot stations ears which actually work to a useful
extent. But somebody has to actually quit talking about it and actually
DO it which is the ultimate tough nut to crack. Like actually getting
spread spectrum running on any ham band . . heh. Sorry, had to do that
for old time's sake Carl!

> My working group, IEEE P802.22, (http://www.ieee802.org/22) is working on

> but we're not there yet.

Agreed.

In the meantime in ham radio however we have the current flap over the
ARRL proposal to deal with. My bet is that in whatever any final form
the ARRL comes up with and submits the FCC will toss it back at us to
muddle through because the general public has no stake whatsoever, for
instance, in Pactor stations being rude.

I agree 100%, Carl. Give them a nice usable chunk
of each band to work with, but not the whole
enchilada.

> artificially inflates prices to the detriment
> of the user community.
> (I am big on "open consensus standards" - something
> I do in IEEE 802.)

All reasonable and I agree 100%. But there's more:

4) If the proprietary company decides to stop supporting
the hardware or software for any reason, hams can be
left high and dry, with a "legacy system". (Example:
Win95 was left unsupported by Microsoft after less
than 10 years. Their advice was to migrate to a newer
Windoze version.)

5) Standardization on proprietary stuff acts as a disincentive
for other manufacturers and individual hams to even get a good
understanding of how the system works. Why should they bother
if they can't do anything to it?

6) It's traditional in amateur radio that standards be determined
conceptually, with many ways of realization. For example, hams
standardized on LSB below 10 MHz and USB above decades ago, but
used all sorts of methods to get there - LC filters just above the
audio range, phasing, crystal filters in the ~455 kHz region,
mechanical filters, HF crystal filters, even the "third method
of SSB" were all used by hams. Nowadays HF crystal filtering is
almost universal, but other methods are still usable if someone wants
to bother with them.

Dave,

I *have* had strong differences of opinion with the ARRL BoD's policies in the past, particularly with respect to code testing, but the code test issue is essentially a dead issue now, since the NPRM makes the FCC's intent very clear and I simply don't see anyone presenting any new arguments for keeping code testing that the FCC hasn't already considered and rejected, let alone one that's rational and compelling.

I disagree with the current form/implementation of the "regulation by bandplan" plan that has (virtually) everyone upset and have stated so quite publicly.
I don't think it should go forward until it's fixed to the satisfaction of at least a significant majority, so yes, I still have differences of opinion with some of what's being done by the BoD - and I'm getting a tremendous amount of feedback that the membership does as well.

"Dave Heil" <k8mn@earthlink.net> wrote in message
news:lDdOe.9299$Wi6.7021@newsread2.news.pas.earthlink.net...
> Carl Stevenson 1997

Taking selective quotes in isolation and out of context can be misleading ... besides, my views have changed in some areas and I have learned to be less confrontational over the years since these relatively ancient quotes that you dredged up were posted (and, what has gone on in the relatively distant past in heated debates on usenet has never been indicative of my behavior on the air ...)
>
> "We'd be better off if we could, instead, find a way to reeducate the
> whining olde fartz ... those whose knowledge of radio is frozen in the 30s
> and 40s somewhere don't deserve their licenses today, no matter how fast
> they can beep ..."

Even Mr. Hollingsworth, I'm told, has refered to "BOFs" (bitter old farts). My comment about "deserving licenses today" refers to those who have never gotten past the tube stage and probably couldn't pass today's written tests. As you will see from my campaign statement, I strongly believe that the ARRL needs to provide much better and more extensive technical eductation programs, both for newcomers and as "refreshers" for long-time hams, so that we can inprove the general level of technical competence in our ranks.

> and could care less what the majority of hams feel or believe."

Everywhere I go (clubs and hamfests), I'm getting a tremendous amount of feedback/input that members *widely* believe that the League's leadership IS out of touch, both with the membership and with many of the realities of today's world. (So I'm not alone in that view by ANY stretch of the imagination, which is one of my primary reasons for running. The other reason is that, after enjoying the benefits of ham radio for about 30 years, I'm at a point in my life where I'm in a position to give something back and I want to do so.)

> "In a word, 'bullshit,' Ed ... it's just that the majority of hams who are

> in holding this opinion."

This, if I recall correctly, was in response to the League's attempt to effectively codify bandplans. That's what I meant by "end-run regulation."

Ed and I have long since gotten past my arguing with him and being suspicious that he was "just a party line man," and we are good friends (I'm also on good terms with Dave Sumner, Paul Rinaldo, and others at HQ and have been working with them on BPL).
However, the basic thrust, while it could have been worded more "diplomatically," is still an issue and something that I'm also hearing from the membership as I visit clubs and hamfests.

>
> Carl Stevenson 1999:
>
> "I don't think we should establish 'protected class' setasides
> for ANY legacy technology ... "

I have actually CHANGED that view to some extent ... I could support a reasonable "CW only" section at the bottom of each HF band. I do NOT support phone band expansion at the expense of CW and data. I believe that the "robot" stations that are causing harmful interference because they can't adequately detect and avoid ongoing operations (due largely to "hidden terminal" effects resulting fromt he nature of HF propagation) should NOT be allowed to go anywhere in the HF bands that data is allowed. There IS a difference between machine operation and human to human operation and the machines are not (at least yet) smart enough to "play nice(ly enough)."

They should, therefore, be limited to reasonably-sized sub-bands.

> Carl's race for the Atlantic Division Directorship should be interesting
> at the very least. Should he actually get elected, I'm sure the seasoned
> veterans of the League will welcome him with open arms.

I am committed to working with whoever constitutes the BoD should I get elected. No, I will not be a "yes man." Yes, I will prod them for more progressive appoaches to many of the issues facing the League and ham radio in general. I will do that based on input from the membership, my technical expertise, my regulatory expertise, my proven track record of leadership and consensus-building in IEEE standards activites and other venues, and my dedication to a healthy, secure, and harmonious future for ham radio.

> changing topics -- in hopes that I'll give up and leave.

Oh no, don't leave, "Frank"...

It just makes the LennieRants more colorful.

Lesssee...You claim I've given you nothing but vague information,
yet you refuse to e mail me directly and get "the details"...

Furthermore, I've given you MORE than enough to verify my duty
without giving you my SSAN to do it with.

You demonstrate lapses in proper USMC etiquette yet try and "dis"
my service just because I won't do a LennieRant and give a complete CV
of my service here. You were in an AAV unit so of course you know
EVERYONE who ever served, including a guy who's service ended 13 years
ago.

LenniePhantom.

I already have. You simply wish to argue.

LenniePhantom

> > I also question your motives in this forum. So far, nothing
> >relevent, other than catching the back of guys who are archived chronic

Guess you don't like having it thrown back at you...especially
when there's nothing in your defense you can say about it.

> > And I told you if you'd care to e-mail me directly I'd be glad to
> >give it to you off-group. I've explained my reasons for doing so.

> story.

I know who Col Vinson was and I know where Ft Gordon is. Never
served with him/for him/within 100 miles of him.

Again...colorful. Clancyesque.

That you attempt to diminish my military service simply because I
do not wish to discuss it in this forum like Lennie's rantings, or like
some drunk at the end of the bar at 3AM only further substantiates MY
claim that your motives here have nothing to do with Amateur Radio,
have more to do with being argumenative, and are dubious at best.

N2EY:

It is probably easy for you to make that mistake in your analysis. As you totally ignore the fact the real problem is the amateurs who take themselves FAR too seriously, attempt to manipulate others with their control freak attitudes, have held amateur radio back in the stone age because of their unwillingness to accept and adopt progress. Ignore the almost total lack of newbies entering the hobby, etc, etc...

Yes, I can accept it looks that way to you, and you want to block discussion on the matter because any discussion and thought causes the facts to come foreword, and the truth becomes obvious. However, I think you too late, the cat is out of the bag and all can see who can face reality...

Cheap shots at diverting attention away from the real facts and onto attacks and battles over personalities only work on those who do not see reality in the stark light which depicts the decayed state amateur radio has drifted into under those stewardship who have used these tactics... I'd cut out the personal attacks and show some embarrassment if I was you, if there was a shred of credibility left to be had, I'd attempt to win it back--if I were you...

AOF:

Exactly, they have become so blinded to the sorry, decrepit, decayed and dying state of amateur radio--they have began to accept it as the norm! And, to resist the very change which would breath new life into the hobby and restore it to some dignity and status--high strangeness alright! They make the mistake of not seeing the insanity in their own words!

Some things in life are just painful to observe, like a wino so addicted to the bottle he just continues on his course, oblivious to the reality of the mess and sorry state he depicts to other around him not sharing the same drunken visions--so are the "lotus blossom eaters" here...

Nope.

More than enough...Name, grade, DOB, even gave "Frank" my last two
promotion board dates...Still finds excuses to "dismiss" those
resources.

> > > > > because he allegedly spoke with a couple of "buds"

>
> It is curious however with your back ground that you don't

Why?

What bit of knowledge about the nomenclature of avionics systems
that were developed before I reached puberty and were antiquated before
I got on Active Duty could be of the least bit of interest, other than
to give Lennie some tidbit to make weeks-long rants out of...?!?

> > > So Steve..... how does an avionics tech wind up in not just one but
> > > -seven- such predicaments?
> >
> > Because Marines do more than what their MOS suggests.
>

"Marines" is capitalized, Markie.

And yes, I was a "real" Marine.

> wether that has anything to do with you is another matter

So you think.

> > intimacy with such notables as LtCol North are accurate.
> >
> Not realy

Yes, "realy".

> without the SSN which you wisely choose not to provide you can't verify
> much of anything, esp with a name like yours

At one time there were no more than 3 Robeson's on active duty in
the USMC. Myself, one who was an ATC in Yuma, and the other fellow who
was African American.

Only one of us named Steve.

> You may simply pick out those dates of the selection boards of someone
> else

Uh huh...righhhhhhhhhhhhhhhhhhhhhhhhhhht.

This is why I do not offer any MORE information than what I have.

Even when I >>DO<< provide some irrefuteable third party source,
there's some cowardly excuse as to why it's not "valid".

> > As I have found with OTHERS here, even when you DO give specifics,

> >
> If you had provided anything with any solid basis it might be different

I did.

> You advance a Callsign and claim it proves you an expect on MARS

"advance a "callsign"...?!?!

"expect on MARS"...?!?!

If what you MEANT to say that I provided ALL of my callsigns in
various MARS programs at one time or another to verify that I HAD been
an ACTIVE and PARTICIPATING member, you'd be correct.

No where, in ANY post have I EVER suggested I was an "expert" (I
assume that
s what you meant) on the MARS program.

What "misdeeds"..?!?!

> > Just like you do.
>
> You are the game player

Nope.

> You are the one that accuses evryone of being mentaly ill

Not "evryone". Just those who exhibit the signs and symptoms of
being "mentaly" ill, Mark. Like those who lie about being "colonels"
in the Armed Forces, etcetcetc.

> > > > And why do you continue to lie about "KY4Z" being involved in this
> > > > forum?
> > >

> cuting
> > Then what you are doing is misusing the VALID callsign of a person
> > who does not participate in this forum.
>
> You claim you need not treat MY callsign with respect

I never said anything of the sort.

I DID make ONE mistake typing your callsign.

I acknowledged my mistake in the VERY NEXT POST.

WHERE, since then, have I made any error attributing YOUR callsign
to YOU, Markie?

WHERE, since then, have I mistyped your callsign?

Yet YOU continue to misrepresent MY words with the callsign of a
person who probably doesn't even know this forum exists.

Why? Other than to substantiate MY claim of YOUR mistruthfulness
and deceit, what do you think mis-attributing my comments to someone
else accomplishes?

> I promised that I would contiue to mangle your callsign until you
> apologize, which is likely to be forever since you don't take
> responiblity for your actions

Apologize for what?

And Markie...Don't look now...But everyone else sees you
mis-attributing my comments to another person.

That's DECEITFUL.

> You just blame others

You're attributing my comments to another Amateur.

That's DECEITFUL.

> > In short...You're the liar, bully and abuser you claim others,
> > specifically me, of being.
>
> Not at all I am using Sarcasm more

Ahhhhhhhhhhhhhhhh! THAT'S IT!

When I say something you don't like, it's "bullying"..?!?!

When YOU do it it's "sarcasm"..?!?!?!

> But then you can't stand anyone dening you your imagined place in the
> heavens'

"denying"

And sentences end with a period, not an apostrophe, Markie...At
least in English.

Steve, K4YZ

You have never provided irrefutable proof

In cliaiming you have you are either lying or showing you don't know
the meaning of the word "Proof"
>

Source record: 116975

Stvei when you going stop and admit you can't cause any real action from the cops of mental health or even get the easter bunny to stop his rounds

You have claimed powers beyond those you have

tried to use them to bully and browbeat people and then when your bluff was called you lie

either you never called (which would have been wisest but I have never accused you of being wise) or your calls feel on deaf ears

confess to your lies

get help for your delusion that Kiddy is the equal of Lying

Grow up

Have you seen the Easter Bunny, Markie? Did he stop at your house
on his "rounds"...?!?!

> You have claimed powers beyond those you have

No, I've not. All of my normal, adult human "powers" are pretty
much the same as everyone else's.

> tried to use them to bully and browbeat people and then when your bluff
> was called you lie

I've neither "browbeat" nor "bullied" anyone, Mark.

And I've not lied about anything.

> either you never called (which would have been wisest but I have never
> accused you of being wise) or your calls feel on deaf ears

Or they ahve more than their fair share of casework, which is,
these days, pretty much universal in ALL aspects of
healthcare...Especially mental health.

> confess to your lies

What lies?

> get help for your delusion that Kiddy is the equal of Lying

It's not a delusion. People who participate in and promulgate
kiddy porn are liars. They lie in order to conduct thier activities,
they lie that it's not harmful to the children, and they lie that it's
"OK" because it's allegedly a "victimless crime".

They are liars. You're a liar. Maybe not the same stroke of the
oars, but definitely in the same boat.

> Grow up

Already have. Why don't you join me?

Steve, K4YZ

What lies?

> yout threats to Todd

I didn't threaten Todd.

> why do you need them listed so often

You've not "listed" anythig yet except more of your own deceit,
Markie.

> are you that dumb that you can't remeber

Speaking of "dumb", the word is "remember"...

And so far you've not substantiated anything.

> > > > Just like you do.
> > >
> > > You are the game player
> >
> > Nope.
>
> sure are

Nope.

> evade change the subject anything but deal with the truth

You're the one who keeps changing the "subject", Markie...

> that being you are a Bully a bragrat and a liar

ROTMFFLMMFAO on that sentence, Markie! Some English!

None of the above, Markie.

> a proven liar

Nope.

Not by you!

> > > You are the one that accuses evryone of being mentaly ill
> >
> more evasion

Those were YOUR words, Markie!

And I don't "accuses evryone", Markie...Just those who show the
signs and symptoms of it. Such as yourself for example.

> > > > > > And why do you continue to lie about "KY4Z" being involved in this

More profanity...More lies from Mark C. Morgan.

> > WHERE, since then, have I made any error attributing YOUR callsign
> > to YOU, Markie?
>
> you still refuse to apologize for it
>
> so

I already acknowledged my error, Markie.

> > WHERE, since then, have I mistyped your callsign?
> >
> > Yet YOU continue to misrepresent MY words with the callsign of a
> > person who probably doesn't even know this forum exists.
>
> until YOU apologize I certainly will

Then you are intentionally lying and deceiving. You're also misdirecting MY commets to those of a person who's not a part of this forum.

Set's the record straight on who's the liar here, Markie.

> > Why? Other than to substantiate MY claim of YOUR mistruthfulness
> > and deceit, what do you think mis-attributing my comments to someone
> > else accomplishes?
>
> it clearly anoys you

It only "anoys" me that you are continuing to misrepresent the truth.

You substantiate my assertion that you're a liar.

> and agains show how you refuse to deal the issues at hand

I am dealing with it.

You misrepresent my comments to another person. You know it and
said you're doing it intentionally.

Makes you the lair and deceiver I claim you are.

> You always evade and obfucate, nothing is ever your fault

You're the one attributing my commetns to a third party.

> > > I promised that I would contiue to mangle your callsign until you
> > > apologize, which is likely to be forever since you don't take
> > > responiblity for your actions
> >
> > Apologize for what?
>
> use your brain

I am.

And so far you've not shown where I have done anything worthy of
an apology.

I made a mistake, corrected it and acknowledged it.

You made a mistake, thought it was funny, and now perpetuate it in
the face of the truth.

> > And Markie...Don't look now...But everyone else sees you
> > mis-attributing my comments to another person.
>
> and they see exactly what I am doing showing you sause for the is sause
> for the gander

No........

They see you intentionally lying.

They see you intentionally mis-attributing my comments to a third
party.

And it's "sauce".

> > That's DECEITFUL.
>
> Not at all

Sure it is.

> I am prefectly upfront about it
>
> Nothing decietful at all

It's still deceitful...Not to mention you've now dragged a third
party who probably doesn't even know this forum exists into your little
demented world, Markie.

> > > You just blame others
> >
> > You're attributing my comments to another Amateur.
>
> Not at all

Sure you are.

You keep "relabelling" the attributes to "KY4Z", and not to me.

> more stevie lies

Nope. More of the truth.

> > That's DECEITFUL.
>
> Not at all
>
> I am prefectly upfront about it
>
> Nothing decietful at all

Absolutely deceitful.

And disrespectful to KY4Z.

> and you can stop it with a single sentence but you refuse

> you refuse to apologize to me for abusing my call sign

I'm not.

> > > > In short...You're the liar, bully and abuser you claim others,
> > > > specifically me, of being.
> > >
> > > Not at all I am using Sarcasm more
> >
>
> more evasion

Allow me to restate it...

I seeeeeeeeeeeee...When I say "something", it's "bullying" and
"abuse".......

When YOU do it it's "SARCASM"..............

Uh huh...Righhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhht.

> end your lies

I'd say "end yours", but then you'd accuse me of encouraging you to
do a Kevorkian...

That is, afterall the only way Mark C. Morgan will ever stop lying.

> > > But then you can't stand anyone dening you your imagined place in the

>I wouldn't call it "small" -- those puppies get mighty heavy on a
>forced march. A "small" radio would be the PRC-68. But the RT-841 (the
>RT used for the PRC-77) was the bread and butter of ground radio comm.

True, but "small" in weight depends on the era of use. The
PRC-8, -9, -10 that the PRC-25 replaced were fully backpack
carry while the -25 and -77 are not. The -25 was first and
had one vacuum tube in the final amplifier (everything else
solid state). The -77 was ALL solid-state plus some other
minor changes. For about a 1965 design start it was
state-of-the-art then.

BTW, the first REAL "walkie-talkie" of WW2 was the SCR-300
(with BC-1000 R/T) of WW2. The full-on assembly weighed in
about38 pounds and the handset was cobbled from a standard
telephone handset having a push-to-talk lever. Far from
the H-33 and its descendents still in the inventory. I've
got a little paper on that SCR-300 at Harold Hallikainen's
website for history. A plateau-jump in design in its time.

http://kauko.hallikainen.org/history/equipment/

Click on Motorola to get the TheFirstWalkieTalkie.pdf.
Appendix C is kind of interesting, a "horse mobile" transceiver
that Motorola produced in 1943 but didn't design...battery-powered
radio-on-a-guidon-pole that fit into a military cavalry
saddle guidon socket. Only problem was that, by 1943, there
was NO MORE horse cavalry in the U.S. Army! :-) Infantry and
others used this HF-only set, an addition of a vehicle mount
was done for Jeeps and trucks.

>granted retirement benefits without serving the full 20 years. (And
>BTW, the rank of Gy.Sgt. is pretty low for retired enlisted.)

GySgt was an E-7 (same as SFC in Army)...USMC enlisted ratings
go to E-9, Sergeant Major. I don't think Stebie would con
anyone on saying he was that other E-9, Sergeant Major of the
Marine Corps! :-)

I was Honorably Discharged in April 1960 as an E-5. Curious
thing with Army insignia for about a decade: They dropped the
"buck sergeant" three chevrons, no rockers, insignia and began
all NCOs with rockers. They also dropped the "recruit" rank in
favor of Private-1 (no stripe), elevated to Private-2 on passing
Basic Training (Army and Air Force don't have "boot camp"), then
began PFC as E-3 with one chevron. Corporal was E-3, two
chevrons. The enlisted insignia changed once again around the
mid 1960s, restoring the "buck sergeant" sans rockers.

Hmmmm...the only time I have a medical discharge now is blood
work twice a year. I DO study for that test and pass it
each time. :-)

>> Robeson has consistently tried to make fun of others' military
>> assignments, claiming his (classic) been in "seven hostile
>> actions."
>
>I can't find that post.

I've seen it, Brian Burke has seen it. I know he wrote it as
clearly as he wrote his classic "Sorry, Hans, MARS >>IS<<
amateur radio!" :-)

A classic "rebuke" in newsgroups is "show me where I said that!"
in terms of great outrage. :-) Anyone who falls for that has
to go back to archives (we used to have DejaNews but Google
bought them), search for the post, copy it out, paste it on
the return post...and find that the "outraged" will not respond,
say it is "false", or rationalize it saying "he meant something
'else.'" :-)

>> First of all servicemenbers don't have any choice
>> of what they do, they go and do whatever they are assigned,
>> wherever commanded.
>
>Upon completion of MOS training, some are allowed to request a
>particular duty station at first. Sometimes that request is granted.
>After that it's a crap shoot.

Some of the military experts in here never served. They
think not being assigned to a combat area was somehow a
negative moral attribute, cowardice implied of course. :-(
They've read all the books, seen all the movies, watched all
the TV shows and KNOW WHAT IT WAS LIKE! :-)

>> This fierce warrior, self-promoted "seven hostile
>> action" implied hero can't even swear like a Marine among
>> other veterans? Highly unlikely. :-)
>
>In all fairness, I knew quite a few Marines that didn't swear.

OK, we differ. :-)

>> Phrases and euphemisms identified with the USMC are easy to
>> get in literature and from TV and movies (tons of that
>> material).
>
>Very easy. What's missing from his stories are unique experiences.

Them we ain't got yet. Not in six-plus years. :-(

What we get instead is a constant barrage of personal insults
directed at us...but no definite answers of his. He's got a
CON going and loves that too much. <shrug>

"...insinuations of intimacy with..."? :-)

> As I have found with OTHERS here, even when you DO give specifics,
>the pat answer is "So, we just accept it because you say so?" , and
>it's "just one more thing" to add to the flame war. It doesn't matter
>how objective or reliable the corroborating source is.

Tsk, tsk, tsk. We all "must" accept Stebie's "word" on HIS
service, yet all he can do is shout "call the VA!" :-)

"It doesn't matter how objective or reliable the corroborating
source is..." if its against what Stebie said or if Stebie no
like it, it is a "LIE." :-)

Poor Stebie...he can't stand up to scrutiny and his "respone" is
to heap abuse on the personals of his challengers.

> I also notice you snipped the line where I suggested you e mail me
>directly and I'd provide more than enough information, off group. You
>didn't even take the time to answer it HERE, let alone privately.

Stebie, it takes as much time to write a single private e-mail
as it does to write a PUBLIC posting in here. Just write your
response IN PUBLIC if you want to be believed. That way anyone
can check it out as they wish. If it is verifiable, it will be
be believed. If it isn't verifiable, then you are just making
with a Confidence Game piece of BS.

> This leads me to believe that it's most likely that if you did and
>I research the headers, we'll find some close relationship between you
>and one of the Infamous Four.

"...close relationship?!?" :-)

Anyone can "research headers" and find the ISP of a poster, and
that's about IT. :-)

Sorry, little Stebie, but nobody has hacked the IEEE website
for the Institute of Electrical and Electronic Engineers
professional association. I may be the only one with that
"header origin." I have NO "relationship" with Frank, with Mark
or with Brian Burke, or Todd, don't know them personally, haven't
met them, don't even live close to them (don't know where Frank
lives, but that is irrelevant). WE all SHARE a feeling that all
you do is lay down a Snow Job, A Con Game Scam, lots of BS, and
a bunch of other nefarious braggadoccio. <shrug>

> Lastly, I find it curious (and certainly lends significant
>credence to doubting you and YOUR stories...) that you show up from no
>where in an Amateur Radio forum, CLAIM to be a former Marine with
>impeccable "references", yet have absolutely nothing to say ABOUT
>Amateur Radio policy.

Tell us how the USMC "career" of Stebie Robeson "affects amateur
radio policy?" :-)

Tell us how the Civil Air Patrol "pilot in command" experience
relates to amateur radio policy? :-)

> Add that to language in your posts that sounds hauntingly like
>Lennie Anderson and I'd say your accusations of fraud belong in your
>own lap.

Poor baby, feeling worried are you?

YOU just POST some verifiable REAL claims to your statements in
order to be believed. So far all you've done is shout "call the
VA!" [the VA will NOT divulge details unless one is a family
member or a reputable, verifiable personnel department of a
company or a verifiable agent of a police force]

You could digitize your DD214 and have it available for private
e-mail (this newsgroup doesn't carry binaries) to PROVE your
military release from active duty. It's only one page long.
But, you won't, claiming some "personal outrage" at having to
do such a thing! Oh, my. We are all supposed to BELIEVE you,
right? While everyone else not believing you LIES?" :-)

>
> all of them or any of them

But WHAT lies?

So far you've not proven that a single lie has been uttered.

You can posture and bluster since there's not been any direct
action on your case taken yet, but even that will come out in the wash,
little man.

> > > get help for your delusion that Kiddy is the equal of Lying
> >

What delusion?

YOU are the one who keeps telling us that lying is OK...THAT is a
delusion.

> > They are liars. You're a liar. Maybe not the same stroke of the
> > oars, but definitely in the same boat.
>
> then you are as guilty as the perps of kiddy porn BYS

Nope.

I havent' lied. Neither you, Lennie, Brain, Toiddie, or
Son-of-Lennie, Frank, have "proven" anything even APPROACHING a "lie".

> > > Grow up
> >

You've been GIVEN information IN PUBLIC that can be verified on an number of topics, Lennie.

You blow it off with your own little song-and-dance.

> WE all SHARE a feeling that all

So far you also share (with the exception of "Frank") deceit and dishonesty. You also have COPIOUS quantities of your own snow jobs, con games, BS, and nefarious braggadoccio in this forum, Lennie...Your pointing finger has plenty of all of them dripping off of them.

Putz.

I just got the phone with the local ss worker.

he informed me that someone claiming to be Steven Roberson (his words) has called and made claims that he was unwilling to repeat. He asked after my relationship with Mr Roberson, I explained that Steve Robeson (and gave him your address from Qrz.com) has made threatening statements in past and present, that they were must likely idle, holding the opinion that Lying and Kiddy Porn are on the same level. that anyone online whould answer turthfully questions about there personal info (he laughed and told me never to give out such info online, or to lie if pressed, that You were threatening others (went into you and BB you and Todd) Claimed that you could get someone more than anoyed over there.

He siad that a case would be added to the Adult protective orders docket where the State Of Michigan would ask for protection of Mark Morgan and my family from Steven Robeson. that he would be served the papers by publising them in the local news paper, it would become effect 10 days after that or about 10 days from thursday if the judge agreed with him.

It would then be illegal for you to come here

Of course it is unlikely to mean much to you since while you were threatening to come UP but I am sure that was more of your blowing smoke, but I am have made aware of how it changes thing in self defense and reminded that the Suprume Court has ruled the cops realy don't have to protect me

John,

My "point" is this....ever since the creation of "incentive licensing". Forcing one to upgrade. I have found a serious degradation of attitudes in ham radio.

I have seen the class of license being used to determine ones "pecking order" in the society of Amateur Radio. Thus forcing upon us a system of "class structure". A structure of unwarranted superiority because of ones license class. I stated it back in 1965 when I first heard of this stupid idea. And I state it today.

Before 1968 when the first phase of incentive licensing was forced upon us
there was a defacto one license system for HF access.

You had the General which gave you all Amateur privileges. As did the old
Class A. As did the Extra. NO DIFFERENCE AT ALL. And the Novice was just
the "stepping stone" to the General.

The Technician was for those that couldn't hack the 13WPM code and had to do
the test to keep a license. The Novice expired after 1 year and was
non-renewable.

# 2650. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-22 20:42:31 UTC
From: LenAnderson@ieee.org
Message-ID: <1124743351.431788.181140@g14g2000cwa.googlegroups.com>
Source record: 117051

Today's Scorecard in the NCTA v. PCTA Amateur NPRM Opinions!

As of 1 PM, EDT, 22 Aug 05, up to 19 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 1748

Indeterminate/duplicates (note 1) 81

Unambiguously Against NPRM (note 2) 463 27.77%
Unambiguously For NPRM (note 3) 967 58.01%
Code test ONLY for Extras (note 4) 237 14.22%

Notes:

1. Includes duplicate postings from same individual, "joke"
or "test" entries which do not have a valid address, or
polemicizing a personal pet peeve which has nothing to
do with the NPRM, individuals not understanding the
scope and purpose of the NPRM, one foreign citizen
submission, and three who were commenting on another
matter having nothing to do with amateur radio regulations.

2. Includes only those who are whole-heartedly AGAINST
the NPRM and against dropping any code testing.

3. Includes only those who are whole-heartedly FOR the
NPRM and the abolition of the morse code test.

4. These are "in-betweeners" who wish to retain the code
test for the "highest" class (Extra) but will accept
eliminating the code test for other classes.

Percentage figures are calculated against the Total less
the number of Indeterminate entries. For all up to
being received by 19 Aug 05 that would be 1667.

Five total letter documents were added into the ECFS on 22 Aug 05
for the 17th, 18th, 19th August. As of about 1 PM EDT on 22 Aug,
104 Comments have been entered for that date; more are expected
later in the day and totals will be upgraded and posted following.

Stay tuned...the future of U.S. amateur radio is being made,
like it or not.

end off

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

> It would then be illegal for you to come here

No, Markie, it would not!

If MI protection orders are like TN, they would prohibit an
enjoined party from approaching or being in closer than 500ft proximity
to the protected party.

Nice try...AGAIN!

> Of course it is unlikely to mean much to you since while you were

80/75 is a seasonal band, as is 160. Summertime activity of any kind is
quite low. With the exception of SSB. It is always full up. At least in 4
land anyway.

Digital is indeed increasing, but so far are staying above 3575. On
occassion I am QRMed from them on the Alabama net, 3575. But they move
when they hear activity...to their credit.

>

40 meters is a butchered band. And yes I know that changes are FINALLY on
the way. Perhaps when it is a exclusive Amateur allocation (at least for
Region 1 and 2) things will improve. But for now it is a complete mess.

It is indeed a active band, for all modes. In reality it needs expanded to
7.5 or so. But that will never happen.

>> >> 20/15/10 could all use some "CW Trimming" today.

I don't know what is "best". I would just like to see a clean spot for CW
only. That is a personal choice, nothing more. Whether I get it is
another story.

>> >> I still like my suggestion......bottom 25 of ALL HF bands....CW > > >>

Then only extra's do CW. I have no solution for that. If the FCC don't
want it, it won't happen.

> They also said that more frequencies was the best incentive.
>

The FCC has NO IDEA what is good for Ham radio. Nor do they give a RIP.

from WHAT...?!?! Your imagination...?!?!

> > From what? Your imagination...?!?!
>
> people that make threats

No one and no legal document can protect you from people making
threats.

No legal order could STOP someone from harming you if they were so
determined...The papers are FULL of stories every week of some poor
soul who HAD "orders of protection" that were assaulted or murdered by
the enjoined party.

Those orders are a placebo, Markie. They don't work.

Neither did this story about a Social Security clerk and your
order of protection!

> > BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

Day 11 Stevie says Kiddy porn is the same as lying, and he was right!

Stevie claims that lying about oneself compares to Kiddy Porn the explotation of Kidds for the sexual pleasures of sick people

Yes indeed Stevie is sick

and since Stevie lies often Stevie should feel he is the same as a Kiddy porn producer

You just keep covering one lie with even worse one

Not even spausal abuse is as bad as Kiddy porn, at least the spouse can run away or defend themselves, a kid can do neither

And that Stevie thinks about kiddy porn to makes such judgements and to bring them out on his own proves who is sick

To bad that TN would not likely do anything about ti if reported

... attitude adjustment, or plans to attempt to make newbies conform
to failed ways?

If you try something and it fails, and you try it again and it fails, and
you try it again it fails--there is something wrong with what you are
doing!

Simple logic really... at some point you must realize you need not ever
be afraid of that "solution" working!

Dan:

Perhaps I misunderstood you. I agree I have run into way too many extras with an attitude they are superior in some way, they are superior at CW, but for some reason that looks like a damn simple thing to excited about, it won't get you a job, it isn't an indication of IQ, it won't help you feed your family, it is not suitable training for any real world skill, etc, etc.

And, you know, the problem really isn't the extras enjoying their "opium dreams" and looking ridiculous to really educated men while they are doing so, it is the damn idiots they are able to snooker that makes you lose faith in the human race! Has a good portion of this world become "extra worshiping fools?", what kind of mental disorder is that? How come I get the feeling like I went to bed and the world was sane, I woke up and everyone has gone crazy?

I mean, it is really too lunatic for intelligent men to argue--fools are grabbing hobby licenses and pretending to be intellectuals--I can't even begin to describe the bizarre nature of this, or how they are so successful at fooling others... I mean it is as simple as drugs--just say NO!

I was afraid this is what you meant by "attitude adjustment" for the newbies, indoctrination into the "church of extra worshiping hams!" Sorry if I was mistaken...

Dan:

What is "good for amateur radio" has to be "what is good for the people", and NOT "what is good for my klick." Which is what you are really stating, it is just a bunch of "good ole cb buddies", but thinking of themselves in some glorified manner! Disgusting really... and yes, I remember a time when it was NOT this way, you had a few anti-social weirdos who were loners and thought themselves special because of a hobby license, but that seems to have become catching and has almost infected the whole lot, the sane ones are rather few and far between these days...

"Amateur Worship is a Mental Disorder", is going to be the title of a book I am working on! <grin>

Mark,

Dumb Mark comment #1:>> Not FORCING BUT PREVETING you bastard,
and it is
not going anywhere any time real soon. <<

I said: Geez, Mark, and I just thought we were getting to get
to be
buddies. Guess the engagement's off, huh?

Mark said: >That is your best shot. I notice that you don't
disagree

To which I will reply: ( 1. ) I wasn't there to verify the
participants at
the act of conception. If calling me a bastard makes you feel better,
then have
at it ( 2 ) I am a 9 time USMC Rifle Expert Mark. If I want
something
shot, even in Illinois, I will hit the target. One shot, one kill. I
don't
waste the govenments ammunition hitting targets that are not of
consequence.
YOU are not of ANY consequence that I am aware of, but situations ARE
subject
to change!

Now it is my turn to call names, Mark. YOU ARE A LIAR!!!!!>>Yes
you have
, you siad we Should all Have to suffer Torture by Morse because Morse
is an
art from, so can BDSM be art form and it is is fun for those that like
it, but
none say they be forced to endure it either<<

I have never ONCE said anyone should be tortured by ANY means.
The only
comments I have made that you dug your gimmie gimmie gimmie claws into
was that
I said code was here for now BUT THAT IT WAS BEING CHANGED.

Ever since, you have dug into anything I say making it a "procode"
agenda,
and there fore "Anit-Mark" What mularkey!

For the record, I now make the following statements that yopu MAY quote,
and I hope you can get THESE correct!:

1. Mark Morgan is a clueless jerk with no life, therefore he must

belittle and berate others, despite the fact he can neither spell his insults
correctly, nor can he assemble more than two coherent sentences. He is a boil
on the Gluteus Maximus of Life.

2. Mark Morgan will probably die lonely, unfulfilled and desperate
because he spent so much time whining about how "we" have so abused him without
him trying to get past his front door to go out and find a life. I know so
many people who are blind, deaf, missing an appendage, lost children in

accidents, etc, and they get on with thier lives. My own daughter is terminally ill. but I don't cry "VICTIM" at every turn! You are a loser punk,
Morgan, unworthy of squat.

I've tried to be nice, even confidential in some of my comments, but you
are such an infuriating twerp that it makes my hair crawl

You can't take ANYTHING without trying to make it a rallying point for
the "Pro-Victim" crowd, even when it's in your defense! Are you stupid or do
you just do this for sport? If you are, you aren't getting any points on the
board!

>
> You had the General which gave you all Amateur privileges.
> As did the old
> Class A. As did the Extra. NO DIFFERENCE AT ALL.
> And the Novice was just
> the "stepping stone" to the General.

Actually it's a bit more complicated....

>From the early 1930s until 1951, there was the three-class "ABC"
system. B and C were the same except C was by mail and B was by FCC
examiner. 13 wpm and a pretty serious written test.

Class A required a Class B or C for a year, plus another written test.
Only available from an FCC examiner, and if you had a Class C you had
to do the exam for Class B all over again.

The *only* operating difference was that Class A had 'phone on HF/MF
ham bands except 160, 10 and 11 meters, and Class B and C did not.

Back then there were no 30, 17, 15 or 12 meter ham bands. And 40 meters
was all Morse Code. The Class A 'phone bands were 75 and 20.

Then in 1951, FCC changed everything. Class A became Advanced, Class B
became General and Class C became Conditional. The new Extra,
Technician and Novice licenses were created. And they announced that
after the end of 1952 there would be no more new Advanceds - you'd need
an Extra to do 'phone on the above-mentioned HF bands.

But in December 1952, just as time was running out, FCC reversed itself
completely, and gave all privileges to all US hams except Novices and
Techs.

FCC continued on that path in the following years. 40 meters got a
'phone segment, and when 15 became a ham band, it soon got a 'phone
segment too.

Some folks were very unhappy about it all. The Class A 'phone bands
became full of newbies with General and Conditional tickets. Only a few
thousand hams got Extras. The Novice was
enormously popular even though it gave extremely limited privileges.

This happy state of affairs lasted only a decade - then FCC began making noises of disappointment about how few hams had Extras and how much appliance operating was going on. ARRL responded with a simple proposal: reopen the Advanced to new issues, and go back to the old system where HF 'phone required an Advanced or Extra.

For about 5 years there were discussions that made the code-test issue look tame. All sorts of proposals came and went - the idea of a rabbit-warren of subbands-by-license-class came from CQ magazine, for example.

A *lot* of folks were very unhappy because when the new rules went into effect, they lost operating privs.
>
> The Technician was for those that couldn't hack the 13WPM code > and had to do
> the test to keep a license.

The Tech was originally meant for those not interested in HF.
It originally did not have 6 and 2 meters.

> The Novice expired after 1 year and was
> non-renewable.

Not only that, it was "non-retakeable". Only those who had never held any class of ham license before could get a Novice. One year, one shot - upgrade or go off the air.

At the end of WW2, there were about 60,000 US hams

By 1951, there were about 100,000 US hams. About 30% were Class A and the rest B and C.

By 1965, there were over 250,000 US hams. About 18,000 were Novices, about 40,000 were Advanced, and only about 4,000 were Extras. The rest were mostly Generals and Conditionals, with a few thousand Techs.

The result was that the vast majority (at least 85%) of US hams had all operating priviliges.

Despite all the changes in the intervening years, FCC says in the NPRM that it thinks there need to be 3 license classes - Tech, General and Extra, with frequency space as the incentive to upgrade. FCC is content to let the Novice, Advanced and Tech Plus licenses disappear by attrition and upgrading Technicians as Techs.

Was the old system better?

Sounds good, but I suspect that there would be some sort of pecking order *regardless* of the situation. Were there only *one* class of ham, some people would still set themselves up as the "anointed ones" by virtue of having some top notch radio, antenna, or whatever. It is that way in every vocation, social group, hobby, sport, or whatever. Kinda like human nature.

In other words, Morse code could go away entirely, no test, no use, nothing, and the situation wouldn't be much different.

You're really into "nice tries" today, aren't, you, markie.

I'll leave the bottom intact ehre so folks can re-read the entire
post.

No threat was made.

Having failed to impress anyone with your "a clerk at the ss told
me..." story, you try this again.

No on threatened you, least of all me.

Must be a boring day in Michigan today. Weather got ya pinned
down, does it?

Steve, K4YZ

Those consist solely of Stebie's messages. That is all.

> You blow it off with your own little song-and-dance.

"Song and dance?" :-)

[just a minute while I put on my Haney plates and move the rug...]

[dancers count in Octal, did you know that? :-) ]

"Song and Dance" Listings I've made:

1. Short-form WORK RESUME, not a "CV" or Curriculum Vitae.
Curriculum Vitae is for academics, is a whole Life
Experience listing.
2. Names and callsigns of living radio amateurs (N2JTV, KD6JG,
W6MJN) who know me (Gene was IN my signal battalion and
worked at the same transmitting station, different shift).
3. Issue date of the Pacific Stars and Stripes military
newspaper which had my interview in it, still archived at
the www.estripes website.
4. E-mail digitized copy of my first 'First Phone license
certificate which you said you didn't look at (impossible
to verify that a recipient has looked at anything).
5. Twice given others' listings of Ham Radio magazine articles
indexes which include my articles published there plus
mention of the fact that I was on their masthead as
Associate Editor in the 1980s (sold to CQ Communications
in 1990 after 22 years of independent publishing).
6. Included mentions of enough events, history, details of
the entire radio world to indicate a familiarity with
that documented history, giving specific websites for
information to verify that.

7. Given websites' URLs for collections for some of my
papers on radio.
8. Given websites for verification of DoD directives,
government radio activities, the NTIA (including Reports),
radio history other than ARRL versions of same.
9. Given book references on radio history and theory.

ALL of that is verifiable by anyone, anyone who cares to LOOK,
write the corporations' personnel departments about my employment,
or write the individuals I've listed.

In addition, I've made all of my PC programs for radio-electronics
freeware. I've mentioned only one, LCie4 (design-analysis of
passive L-C filters) in public communications with Jim Weir,
(WX6RST?) both in here and in rec.radio.amateur.homebrew.

NONE of what I've said/written is any sort of fabrication. It is
ALL independently verifiable. NONE of it is "song and dance."

Do we readers of this newsgroup see anything remotely similar
from Stebie? NO! All we get is vague generalities, no details,
smokescreened by innumerable personal insults against the
challengers in an attempt to divert attention.

>> WE all SHARE a feeling that all
>> you do is lay down a Snow Job, A Con Game Scam, lots of BS, and
>> a bunch of other nefarious braggadoccio. <shrug>
>
> So far you also share (with the exception of "Frank") deceit and
>dishonesty.

What "deceit" and "dishonesty?" Anyone is free to independently
verify for themselves what I've said is TRUE.

You seem to be operating from your own fantasy world where you
IMAGINE what others "really are." THAT is wrong, that isn't the
real world where the rest of us live.

You REFUSE TO ACCEPT what some of us have done in radio-electronics
and prefer to engage in petty squabbling and Flame War ignition
because you get challenged on your own opinions. Your ego is
seemingly so sensitive that you can't stand anything negative
said about your opinions, attitudes, or general comportment...yet
you insist on being "blameless" for heaping personal abuse on
others IN PLACE OF replying on the SUBJECT under discussion.

You've done the latter as shown quoted above. You do the same
thing in the quoted text following -

> You also have COPIOUS quantities of your own snow jobs,
>con games, BS, and nefarious braggadoccio in this forum, Lennie...Your
>pointing finger has plenty of all of them dripping off of them.

ANYONE can verify my "background" (work/hobby/life experiences) from the references I've given in public. Independently verify them. Having a different opinion on something is NOT a "snow job," "con game", "BS", or (love this one) "nefarious braggadoccio". It is simply HAVING A DIFFERENT OPINION. That YOU don't like an opinion different from yours is NOT some kind of "exemption" to call others names, to insult them. Yet, you routinely insult, demean, heap abuse on those who differ in their opinions. Sooner or later you MUST learn to take it in regards to differing opinions. The real world does NOT run on Stebie fantasies or ego-centric thought.

All you need do is to post some VERIFIABLE information or have some digitized documents available for e-mail to prove your statements. You SHOULD state YOUR case on "experiences" in enough first-person detail so that others - who have shared similar experiences - can judge whether or not they are "true." Avoid the constant barrage of petty insults thrown at those who challenge you in place of supplying verifiable references.

The constant, almost unremitting Flame War you engage in here only makes "your case" unbelievable, as if your whole reason-for-being is to FIGHT with everyone. I'm sure there's a "rec" newsgroup just for FIGHTING. Go there and work out if you must. Remember that THIS newsgroup is for recreational radio, amateur policy matters, NOT "Stebie Against The World."

Oh, work on your salesmanship skills. All good con men are salesmen at heart. So far you've not sold much...if anything.

So far we've got NOTHING but vagueness.

Must be a lot of that vagueness stuff going around...

> Furthermore, I've given you MORE than enough to verify my duty
>without giving you my SSAN to do it with.

"SSAN?" :-)

"Lesssee"...You claim that you were "in seven hostile actions."
Tsk, we don't know the Where or When of your involvement.

"Lesssee"...You claim to have been an "avionics tech" yet
you've been UNABLE to mention a single piece of aviation
electronics by nomenclature or familiar name. [were you
"brain-wiped" on leaving the Corps?]

"Lesssee"...You've NOT mentioned a single name of a "bud" or
Corps comrade who can be reached for independent verification
of your Corps existance...after 18 years of service you have
NO friends or references? [that's cause for alarm to everyone
right there]

> You demonstrate lapses in proper USMC etiquette yet try and "dis"
>my service just because I won't do a LennieRant and give a complete CV
>of my service here.

"...proper USMC etiquette...?"

[did your mess tables have little doilies and place settings? :-) ]

Tsk, Stebie had better look up "curriculum vitae" in his Latin dictionary. Those of us who WORKED FOR A LIVING in the radio-electronics industry called it a "resume" (pronouce it "resz-u-may") and, lo and behold, so did the Human Resources folks (fancy new name for Personnel Departments)!

> You were in an AAV unit so of course you know
>EVERYONE who ever served, including a guy who's service ended 13 years
>ago.

Don't YOU? :-)

Tsk, back a few years in here, I made a humorous mention of "Street Road" going through Bucks County, PA. A big Flame War erupted about my being at Naval Air Development Center in Warminster, PA (as a field engineer for my employer, RCA Corporation, specifically on air tests of an R&D collision-avoidance system). I was there in the winter of '71-'72 for three months plus three other short trips there in '72. At NO time did I ever "seek employment" there or "work for the USN" at any time (I worked for a private corporation). YOU said "you knew several" there that were "your buds" who aid I "wasn't a good employee" or words to that effect. That was a fabrication but you did not yield ANY details about me or your "buds" or even where I was working (the Warminster NAS or Naval Air Station, a one-runway field was bisected by a road separating it from the NADC main building...I was mainly in the main building).

Later on, in here, you brought out some UNNAMED "now-PhD" who "knew me" back then and said "I was not a good employee [of the Navy]." You kept insisting that unnamed person was "real" yet you "were obliged to keep his identity secret." That's ten kinds of BS crock, Stebie. In the short three months bisected by year-end Holidays, I worked directly with only 3 civilian employees of the USN, was NEVER a USN employee, always had a Visitor badge worn in addition to my RCA badge, met some of the pilots and aircrew (enlisted all USN, one civilian pilot, three USN commission pilots), and assorted USN and civilian NADC and NAS workers. The three civilians I worked with directly all retired long ago but here are their initials: S O B M J R - all you have to do is get them in pairs to think up their names...and then NAME the NADC section I was visiting for this R&D program's flight test for the U.S. government, NOT specifically for Navy development. While you are at it, you have to name the OTHER private corporation who ALSO had their anti-collision system flight tested there also for the U.S. government, not for Navy development. Feel free to name the USN aircraft used in those flight tests if you wish...I was in ALL of them.

You CANNOT complete any of those requirements, Stebie, because
- if you were really assigned to Warminster NAS - you were there
TEN YEARS AFTERWARDS when the NADC main building was shutting down
and projects there moved elsewhere. NADC is long GONE now and
perhaps the NAS is also (I don't really care). I was NEVER trying
for any Navy civilian employment position there just as I NEVER
tried to do so at China Lake or Point Mugu or Key West NAS or
Patuxent River (MD) Test Range ("Pax River"). You kept saying I
was either a "Navy employee" or "tried to get a job there", neither
of which was true.

Now YOU NAME this "now-PhD who knew me" back 33 1/2 years ago or
admit it was all a weird FABRICATION of yours. Your choice.
You haven't given detail One on this fabricated individual other
than glossed-over generalities and dire implications.

Tsk, you've "accused" Frank Gilliland of "making things up" yet
that is what YOU have been doing for years in here!

oop now

Lying is a sickness.

> Yes indeed Stevie is sick

Other than a bit of indigestion from too much pizza this
afternoon, I am quite fit.

> and since Stevie lies often Stevie should feel he is the same as a
> Kiddy porn producer

You have yet to validate a single one, Markie.

> You just keep covering one lie with even worse one

Nope.

> Not even spausal abuse is as bad as Kiddy porn, at least the spouse can
> run away or defend themselves, a kid can do neither

Untrue. Many kids can do exactly that too. Most don't, but then
most abused spouses and domestic partners don't "run away or defend
themselves" either.

> And that Stevie thinks about kiddy porn to makes such judgements and to
> bring them out on his own proves who is sick

As much as I hate to do it, Markie, being made alert for such
potential abuses of children is a requirement of my job. There are
classes specifically taught to recognize such potential activities.

> To bad that TN would not likely do anything about ti if reported

Report away, Markie.

Because Tennessee ENCOURAGES people to report any questionable
behaviour. They DO investigte all claims.

However they ALSO have protection written into the Act which
allows for very serious fines and incarceration for anyone who knowing
"reports" another (regardless if they are a healthcare worker or
not...) with deceptive intent.

That would be you, Markie.

You raise a good point, Dan. Elmering is good. Being a willing student is good. You must have both for it to work. Many new Hams do not want to feel inferior. I don't know if it is the first generation of "high self esteem" students hitting adulthood or what. But there are a number of newbies out there that bristle when offered advice. And I do know how to offer advice in a kindly manner.

But I personally know of a case of an Extra who had no HF experience who told me "If you don't mind, I'd like you to leave now, I don't need

your advice.", and then proceed to make 6 QSO's during a 6 hour stint during a QSO contest. This guy made Extra without ever getting on HF.

Another case in which a fellow was working PSK31, and wasn't having any success. I sat with him, and it was obvious that the problem was that the guy had happy fingers, and was changing the modulation frequency way too quickly. He'd call CQ, and then switch frequencies after only one or two seconds.Couldn't hear people calling him back. Unfortunately, he "knew" that the trouble was actually in the antenna I put up.

There are other stories, but I won't belabor you with them.

While most hams *are* accepting and eager for Elmering, there are a number who have come into the hobby already knowing everything.

And there is some advice that I would offer to those who would set themselves up as the shakers and movers of the Amateur radio world:

While it may not be palatable in this new "high self esteem" world, there is a place for the Elmer, and there is a place for the student. The Elmer must be willing to teach, and the most important knowledge for the student must be knowing that he or she is getting a great gift.

It goes both ways.

Some of us could care less about compassionate no-codism, and would much rather, uh, cello-brate. Openly. However...

> Compose yourself. Orchestrate a new outlook.

I'll try to arrange it. I cannot guarantee the cooperation of others in the movement...they may not share your symphony...er, sympathy!

> Or fiddle around with radio. At your rhythm.

Actually, I've been doing just that here in my "bass" of operations, and almost spilled coffee on my keyboard (the computer one, not the musical instrument). Therefore, if you'll excuse me, Maestro, I'm going to try to strike a chord that is more in harmony with tuning around on the HF bands by bringing this message to its crescendo.

Ouch! That never should have been written. If a person doesn't like CW, fine. But that never should have been written by any person who would someday count those people among his/her constituents.

Better things could be written, such as: We would be better off if we could engage the more experienced Hams in the concept of lifetime education. Radio technology has come so far that it can only be advantageous to strongly encourage, perhaps even require the knowledge of new technology, as old and obsolete technology falls to the wayside.

Probably better than calling them olde fartz.

I do believe that a person is entitled to change their mind. This is of course as long as there is adequate reasons given. Too many people have been hamstrung by the idea that for a person to be consistent, they must make up their mind early (usually by a party line) and to never never ever change it.

So while it raises my interest that Carl has changed his mind on some items, I am inclined to grant him the Benefit. I see nothing particularly wrong with his present position.

That is that part. On the other hand, I am concerned with the "Olde Fartz" business, as well as some discussions I have had with him here. Was he just being a little wound up one day, or does he really support removing the licenses of "whining olde fartz". And regarding elimination of Element one, and the consequent endorsement of reduction of the test requirements, after saying the "n" word, (never), do I take him at his word, or do I be careful for (at best) strained interpretations of what was actually said.

There ya go, Carl. I'm not trying to be confrontational, just honest. I might still support you, I suspect that you would do a good job, but I do have some concerns.

Mike:

No one should ever be confused by the term "old phart", or any derivative of that terms' meaning.

At ~55 I AM AN OLD PHART! But, perhaps there is fudge room" till 60, ask a teenager and 35+ is an old phart, ask an old phart and he will claim there ain't none (especially if he is the oldest-old phart--otherwise he just points at "the old guy!" <grin>)

By 65+ you are past the concern of the world--if you are still attempting to maintain control, have a trophy wife on your arm, and find a viagra tab--you just look pathetic to anyone in the real world... 70 is ancient, 75-80 is dead, however some dead people are still animate, and even past 80! Science is working on prolonging lifespans, they need to work more on keeping 'em from looking like corpses! (I just love the guys with a rug stretched over their head--if they were wondering if I notice--I DO!)

I may be accused of "being insensitive", I won't even consider arguments claiming I am in error...

A good way to know you are just in the way and embarrassing yourself, and having others embarrassed for you, is when:

You no longer are current and up-to-date, break into long boring stories of yesterday, and find younger people a bother when they are participating in your activity and especially when showing you up, and you fail to notice what a drain you are on the younger people about you...

... nothing gets better as you get older, and that's a fact! (well, except the younger women! <grin>)

Bulshit

quoting you
To which I will reply: ( 1. ) I wasn't there to verify the
participants at
the act of conception. If calling me a bastard makes you feel better,
then have
at it ( 2 ) I am a 9 time USMC Rifle Expert Mark. If I want
something
shot, even in Illinois, I will hit the target. One shot, one kill. I
don't
waste the govenments ammunition hitting targets that are not of
consequence.
YOU are not of ANY consequence that I am aware of, but situations ARE
subject
to change!

Unquote

the last sentence is particularly ilumanting

>
> Having failed to impress anyone with your "a clerk at the ss told
> me..." story, you try this again.
>
> No on threatened you, least of all me.

Liar

> and you know this how?

Because a friend wouldn't put me in that position.

Would a "friend" send e-mail to me in YOUR name making
inapproprite suggestions, Mark?

If ANYONE approached the "ss" in my name in regards to you, it was
an effort to compromise me. That's not friendship.

And if anyone DID approach them in my name, they were stupid.

However I am still of the opinion that this is nothing more tha

> > > just reporting the facts of his call
> >
> > Markie, the simple fact that you tried to start off your STORY by
> > suggesting that it was a "Social Security" representitive made all the
> > rest of it ludicrous.

> never said social security you made that up

Nope.

YOU did. Unless you were intending "ss" to be in reference to
some neo-Nazi office that you call on a regular basis?

> I though socail services was clear enough

Nope. Not at all. What's "socail" services?

This is why YOU have a problem being understood.

You "assume" that everyone else in the world knows which set of
definitions, abbreviations, or other abuses of the English language you
intend to use today.

And in any case, it still stands that I made no phone calls.

> cuting

Of course you would.

Mike,

Have you seen my response to Dave's post? I believe I addressed the point
you seem most concerned about.
(and yes, there were days when we were ALL more than just a bit "wound up"
:-)

If you have further questions, you can either ask them here, in private
e-mail, or e-mail me a phone number and I'll be happy to call you for a
chat.

Nope.

> no way that is anything but a death threat

It's a lot of things...A death threat isn't one of them.

> no tlak by stevie of debate or tlaking at nothing but going on about
> shooting and killing

"tlak" "tlaking"

Just responding to your "is that your best shot" comment in kind.

"...I don't waste the govenments ammunition hitting targets that
are not of consequence. YOU are not of ANY consequence that I am aware
of, but situations ARE subject to change!..."

And STILL no death threat!

Give it up, DelusionBoy! That was no more a "death threat" than
your "I am a Colonel in the Army Chemical Corps" was true!

"illuminating"

No, it wasn't.

Seven years later and it's STILL no threat.

> > Having failed to impress anyone with your "a clerk at the ss told

It can only be a death threat

It has nothing to do with hamradio

nothing to with the topic "Cw it more than just a mode"

it is and remains a death threat
>

Dan:

I can think of at least one way to make incentive licensing more
effective, perhaps up to 100% effective:

Trick those in question into consuming a very slow acting poison. Then
tell them, "Those who pass a CW exam at 13+ wpm will get the antidote, the
poison will kill you in a month if you are unsuccessful. Then, shove a
CPO in their hand and a study book, come back just short of a month and
administer the test--I expect very few would die."

Indeed it does

How anyone even Stevie could come up with Social security a federal
agency when the subject was possible actions of the state of michigan
is beyond my understanding

Did you catch how Stevie is also claiming to have certain knowledge
that no one seeing the exchance between us decided to call Michigan
and claim to be Stevie

The drawn line? The inexperienced Extra who refused advice on how to work in a QSO party probably didn't have much fun in the contest. Staying overnight, and making 6 QSO's probably wasn't much fun.

The other guy with the happy fingers on the keyboard did eventually calm down enough to make a few QSO's, but still blamed his problems on the antenna.

I doubt that either of these guys will go on to have much fun in Amateur radio. Who knows why some people are so reluctant to take a little advice. Perhaps they are sensitive, and don't want to be thought of as not knowing everything (like who does)

OTOH, I did indeed treat my Elmers with respect, and learned a lot. Some of them were old, and some were cantankerous. Big deal. Treat a person right, and they are usually happy to share their knowledge with ya. I'm happy to learn from anyone, even those who think I am a horses patoot.

It's not a medical issue.

> > > Yes indeed Stevie is sick
> >
> > Other than a bit of indigestion from too much pizza this
> > afternoon, I am quite fit.
>
> No you are sick, saying kiddy porn is related to lying

They are. And no, I am quite well..The earlier indigestion from
the pizza waned, thanks to some Zantac OTC.

> > > and since Stevie lies often Stevie should feel he is the same as a
> > > Kiddy porn producer
> >
> > You have yet to validate a single one, Markie.
>
> sure have

Nope.

Not a one.

> > > You just keep covering one lie with even worse one
> >
> > Nope.
>
> yes

Nope.

> > > Not even spausal abuse is as bad as Kiddy porn, at least the spouse can
> > > run away or defend themselves, a kid can do neither
> >
> ratonalizing his sickness

Those were YOUR words.

Here are mine, since you "commented" on them but didn't cite what
you were replying to (very poor netiquette, by the way...)

QUOTE:

Untrue. Many kids can do exactly that too. Most don't, but then most
abused spouses and domestic partners don't "run away or defend
themselves" either.

UNQUOTE.

Number one cause of premature death of adults in families under
age 50 is homicide-by-partner. Most of those cases were of persons
killed by spouses/partners who had abused them before.

This is a fact.

> > > And that Stevie thinks about kiddy porn to makes such judgements and to
> > > bring them out on his own proves who is sick
> >
> more rationalizing his remarks about kiddy porn

More of me reinstating comments you are commenting on but didn't
quote:

QUOTE:

As much as I hate to do it, Markie, being made alert for such
potential abuses of children is a requirement of my job. There are
classes specifically taught to recognize such potential activities.

UNQUOTE.

That's not "rationalizing", Markie. It's the truth.

> > > To bad that TN would not likely do anything about ti if reported

>
> No deceptive intent You are sick and discusting

Nope...But I am sure you will do your best to make everyone think so.

If you were a bit more literate or graceful with the printed word, you MIGHT convince someone...until you started in with more of your tales, that is...

Nothing is beyond your "understanding", Markie...You've said so
yourself.

> Did you catch how Stevie is also claiming to have certain knowledge
> that no one seeing the exchance between us decided to call Michigan
> and claim to be Stevie

That's not waht I said, Markie.

YOU said a "freind" was "helping me out".

I said that anyone who was doing that wasn't a friend of mine.

> > > > > And Markie...I know better than to send it to "ss".

Nope.

But the "telephone call" story sure was!

Steve, K4YZ

## 2703. Stevie confesses to mental dischage from Marines

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-23 01:31:42 UTC
From: an old friend <kb9rqz@yahoo.com>
Message-ID: <1124760702.419448.29320@g47g2000cwa.googlegroups.com>
Source record: 117004

Stevie has deined any physcail problem so it must be metnal discharge
there at the end

from ERLPN Sep 18 1998, 3:00 am
Mt. T,

Re your:>>If he was a Marine I would take credits away from him.
We use to
say the
Marine Motto was "Charge,Kill, kill Die." Charge up the hill,kill as
many as
you can and die as you get to the top.<<

My Drill Instructors were a bit more realistic. Our focus was
"It's NOT
your job to die for your Country....It's your job to make that other
poor
S.O.B. die for his."

Yes, spoken by General Patton (or alleged to have been), but
sensical to
me. A dead Marine can't kill other enemy soldiers.

Perhaps in "your day" there was a glut of Marines to use as cannon
fodder,
but when I hit the Yellow Footprints on September3rd, 1974, it had been
"all
volunteer" for a year, and the Recruiters weren't exactly overwhelmed
by
persons jamming the hallways to get to MCRD. Taking out "more' of
them" than
took us made (makes) sense to me!

(In case you want to check the validity of my service like Mark,
start
with Platoon 2100, F Co, 2nd RTB, RTR, MCRD SanDiego from the date
above,
finishing with medical retirement from MCAS El Toro, CA 29 May 1992)

Semper Fidelis

of course it is

Unless it is a religious one in which Lying is not a sickness, it can
be a religious requirement

and In amercia we still have freedom of religion

>
> > > > Yes indeed Stevie is sick
> > >

What BS?

(And that should have been "Your BS.", Markie)

> cuting the spelling cop

"cutting".

And Michigan should STILL be capitalized as a "proper" name.

> when you going to admit you are full of #### in claiming Michigan is
> going to do something on your say so

Well...IF I were full of ####, I would let my doctor
know...However I'd prefer to get some OTC Colace or Milk-of-Mag first.

And I never said anyone was going to "do something" on my "say
so".

You're welcome to recover and re-post the item wherein you believe
I did....

It is your BS?

you claim Michigan would do something.

It will not

so you are lying and bsing when you claim it will

so how long you going to keep it up
>

right there at the end

you claim to medicaly discharged and deny it was physical more recently
so it must be a mental

Simple logic

Mike:

It is all what you are after, usually my amateur interaction is not a group effort, I take the extra time to search out real conversation, not just signal reports, phone quality, equip. lists, etc... perhaps I fancy myself a cowboy, I just think of it as making good use of my time... some net work is alright, mostly there I listen a lot, heck, if they are willing to do all the talking might as well fall asleep listening to them...

John

Brian Kelly/W3RV started a thread about your run for office. He
referred to you as "Carl Anderson." I guess anything is possible after
downing a 5L box of Almaden.

Simple until you factor in the mind of Robeson. Steve has had ample opportunity to set the record straight (at the tune of 1,000 posts per month), yet he doesn't. Wonder why?

> > > (In case you want to check the validity of my service like Mark,

> history

I agree with your deduction.

Now I can only wonder how a medical discharge/retirement at 18 years of service doesn't permit a disability pension. More and more of Robeson's "facts" just don't add up. Robeson couldn't tell a truth if his reputation depended on it (and it does).

## 2715. Another Stevie lie uncovered

Newsgroup: rec.radio.amateur.policy

from ERLPN Jan 31 1999, 4:00 am
Several days ago I wrote a private mail to Mark NoOrgan which he
promptly
editied and put on this NG. A disrespectful thing to do, but nothing
less than
what we have come to expect.

I repost that letter in it enirety here for anyone who gives a
rat's kazoo
to see how Mark NoOrgan manipulates words to TRY to make his pont:

>>KB9RQZ de K4YZ,

reminder cut

Stevei has gone and on about how has he never sent me private email
there is a post in which he boasts publicly of sending it

try google search in this group on erlpn and organ 3 entiries found one
of them this one

Indeed if he did not recieve a pension for something at that point he
should have hired a lawyer and fought it, maybe even just gone to JAG
and gotten them to fight for him

> nope they were yours words

Not in the quote above, which is YOUR words.

(See what happens when you "comment" on words you cut out,
Markie?)

> More lies

Nope.

> > And I don't "accuses evryone", Markie...Just those who show the
> > signs and symptoms of it. Such as yourself for example.
>
> everyone that dares disagree with you

Nope.

Dee has disageed with me before. So has Carl, several of the
"Jim's", Larry Roll, Hans, Kim and others.

So there we have you at an obvious disadvantage AGAIN.

> > > > > You claim you need not treat MY callsign with respect

>
> Nope Stevie acted then told his victum to go look for his explanation

You claimed I didn't acknowledge it.

I did. Told you EXACTLY where it was.

> what you going to do threaten to report me again?
>
> You are the little kid screaming that someone said a bad word

Maybe if more little kids were screaming about "bad words", some
of the bad words would go away.

> > > > WHERE, since then, have I made any error attributing YOUR callsign

> > > >
> > > so
> > >
> > I already acknowledged my error, Markie.
>
> but not apolized for it

What was to "apolize" for...?!?!

The callsign I accidentally typed was for an unassigned callsign.

> > > > WHERE, since then, have I mistyped your callsign?

You didn't anser the question, Markie.

WHERE SINCE have I made that error?

I did it and it was an accident. I acknowledged it.

You did it once and I wrote it off as an accident. You decided
that mis-attributing my comments to a non-participating third party was
"cool" or something...

Certainly neither effective or productive.

> > > > Yet YOU continue to misrepresent MY words with the callsign of a
> > > > person who probably doesn't even know this forum exists.

> > > until YOU apologize I certainly will
> > >
> > Then you are intentionally lying and deceiving. You're also
> > misdirecting MY commets to those of a person who's not a part of this

> > forum.
>
> no another Stvie lie every knows what is happening

"Stevie".

Yes...they see...

They see you continuing to mis-attribute my comments to a
non-participating third party.

> > Set's the record straight on who's the liar here, Markie.
> >
> > > > Why? Other than to substantiate MY claim of YOUR mistruthfulness

> > Makes you the lair and deceiver I claim you are.
> >
> > > You always evade and obfucate, nothing is ever your fault

> >
> > You're the one attributing my commetns to a third party.
>
> No such act is occouring

"occuring"

Every place you re-attributed my comments to "KY4Z" it did.

> > And so far you've not shown where I have done anything worthy of
> > an apology.
>
> and I can do the same as you do
>
> If you need not apolgize to me I need not to you
>
> Fair is fair

When I typo'd your callsign, it was an accident and I acknowledged
it.

You're doing this maliciously.

Big difference.

> > I made a mistake, corrected it and acknowledged it.
>
> You never corrected it

Sure I did.

Show me JUST ONE INSTANCE where I have mis-attributed your callsign
since, Markie..?!?!

> you never apologized for it

It wasn't YOUR callsign I mad the mistake on...It was KB9EQZ.

No one holds that call anymore.

AT THIS POINT MARK MORGAN ACKNOWLEDGES JUST WHO'S ATTACKING WHOM.

> > You made a mistake, thought it was funny, and now perpetuate it in
> > the face of the truth.
>
> No mistake I decided on it as a method of attack

So here wehave and OVERT acknowledgement of an "Attack"...

BY YOU on ME.

> never claimed it was a fact merely a tactic

A foolish one.

Now made DOUBLY foolish!

> > > > And Markie...Don't look now...But everyone else sees you
> > > > mis-attributing my comments to another person.
> > > >
> > > and they see exactly what I am doing showing you sause for the is sause

>
> > You keep "relabelling" the attributes to "KY4Z", and not to me.
>
> nope

Sure you have.

Everyone's seen it.

Now they also have you making an over lie.

> cuting the repitition
>
> > And disrespectful to KY4Z.
>
> Not at all I am using him in noble cause

First of all you admit you're "using" him...WITHOUT his consent.

That's identity theft. A federal felony, since you're doing it
across state lines.

Then you assert it's for a 'noble cause'...the problem is that
your 'noble cause' is one of overt lying and deceit.

What's noble about that?

> > > and you can stop it with a single sentence but you refuse
> >
> > > you refuse to apologize to me for abusing my call sign
> >
> > I'm not.
>
> the you choose for this happen

Nope.

> you are choosing to abuse the poor fellow you claim to feel for rather
> than be man and apologize for your mistake

Alrady acknowledged the error, Markie.

But it wasn't YOUR callsign...KB9EQZ is unassigned.

> and then flaming me for demnding my due

"demanding"

You're not "due" anything, Markie...not from me, anyway.

> > > end your lies
> >
> > I'd say "end yours", but then you'd accuse me of encouraging you to
> > do a Kevorkian...
>
> do yourself a kevorkian

Nope.

> That is, afterall the only way Stevie Robeson will ever stop lying.

I'd have to start in order to stop.

> > Steve, KY4YZ

And you still can't get your insults right.

Steve, K4YZ

No correction no apology

you don't go making a guy look for an apology

cut the repeat

> I did. Told you EXACTLY where it was.

No you did not

since your posts don't hit the usene tin the oerder you send em
sometimes they spread apart by several hours

another stevie lie

>

Where did I say I was going to leave? I didn't. It was just wishful
thinking on your behalf.

> It just makes the LennieRants more colorful.
>
> Lesssee...You claim I've given you nothing but vague information,
>yet you refuse to e mail me directly and get "the details"...

All I was looking for was a simple tidbit of info that only a Marine
would know, but that seems to be beyond your capabilities. But it
doesn't matter anymore..... see my other post.

> Furthermore, I've given you MORE than enough to verify my duty
>without giving you my SSAN to do it with.

I don't need your SSN, nor did I ask for it. What's your obsession
with your SSN?

> You demonstrate lapses in proper USMC etiquette

.....say WHAT?

> yet try and "dis"
>my service just because I won't do a LennieRant and give a complete CV
>of my service here.

I don't seem to recall asking for any long-winded rant. Just any bit
of information I can use to verify your claim.

> You were in an AAV unit so of course you know
>EVERYONE who ever served, including a guy who's service ended 13 years
>ago.

Yep, you're right..... I bypassed boot camp, went straight to AAVs,
stayed there until my discharge, and never spoke to anyone outside the
unit. Sure thing, Steve.

You twist the facts almost as bad as Bush.

Really? I have never heard of -any- Marine retiring as a Staff
Sergeant or lower (unless they retired before Korea). I suppose there
were a few, but not many.

> Also, Marines abbreviate "Gunnery Sergeant" as "GySgt"...Not
>"Gy.Sgt"

Marines don't give a shit just as long as what's printed, written or
typed is understood.

Thank you. My minor was Communications so I took a few lit classes. My
favorite is Pynchon. Clancy, IMO, is the Danielle Steele of action
novels -- i.e, his stuff is mental popcorn. If you want to break into
fiction that is at least readable (barely) try some early Dean Koontz.

> Right.....

I guess I have to spell it out for you: There's no proof that you are
him. In fact, there's a good possibility that you are one of his
deadbeat offspring; i.e, little Stevie Junior, the jobless mutant
child coddled by mommy and living in the basement. Assuming you really
-are- who you claim, you sure are setting a -=BAD=- example of the
discipline both required and expected of a retired Marine Gunny of 18
years (which is bullshit in and of itself) by wasting so much time
engaging in flame wars on Usenet. I can get away with it because I was
a shitbird..... but you? Heck, if I was USMC retired and behaving the
way you do I'd go outside and kick my -own- ass out of respect for the
Corps. And -THAT'S- what Semper Fidelis means, Steve.

> Snip

And there you go snipping again, right after whining about being
snipped.

>> expect me to keep anything you say quiet if you fail to verify your
>> story.
>
> I know who Col Vinson was and I know where Ft Gordon is. Never
>served with him/for him/within 100 miles of him.

And here is where your lies finally come to an end. If -you- were in avionics in the 80's then you most certainly -DID- 'serve' under "Colonel Vinson"..... who, BTW, is not a real person, and you would have known that if your story was true. VINSON was the crypto system that was used for almost all radio equipment in that era, and EVERY tech -- avionics AND ground -- was trained to do first and second echelon repairs on that equipment. You could have easily replied with "KY-58" (the avionics equivalent of the KY-57), or KYK-13 (key holder used for both). But you didn't even recognize the name VINSON even in context with Ft. Gordon, home of the crypto schools.

You had several chances, "Steve"..... you flunked.

And BTW, the info above isn't much of a secret since Time magazine put a picture of a KY-57 on the front cover back in '83 -- nice pic of a Beirut Marine next to a jeep with a VRC-12.

> Again...colorful. Clancyesque.

You and fiction seem to get along quite well.

> That you attempt to diminish my military service simply because I
>do not wish to discuss it in this forum like Lennie's rantings, or like
>some drunk at the end of the bar at 3AM only further substantiates MY
>claim that your motives here have nothing to do with Amateur Radio,
>have more to do with being argumenative, and are dubious at best.

Blah, blah, blah. You've been both outed and spanked. Either fess up or shut up.

>Dan:
>
>What is "good for amateur radio" has to be "what is good for the people",
>and NOT "what is good for my klick."

No, John, it IS for their clique...except they can't see anything
but their clique as being "amateur radio."

> Which is what you are really
>stating, it is just a bunch of "good ole cb buddies", but thinking of
>themselves in some glorified manner!

To Dan the ARS stands for Archaic Radiotelegraphy Society.

Kind of a low-grade "one-world, one-government" kind of thing,
all molded around THEIR concept of how the hobby "is."

Dannie can't accept anything else but HIS beliefs. For other,
different ideas he gets hostile, volatile, tries to batter
the different to the floor tile.

> Disgusting really... and yes, I
>remember a time when it was NOT this way, you had a few anti-social
>weirdos who were loners and thought themselves special because of a hobby
>license, but that seems to have become catching and has almost infected
>the whole lot, the sane ones are rather few and far between these days...

We differ, John. I can easily remember a mere two decades ago
on visiting the Lockheed ARC...when Lockheed was having a lot of
difficulties with the state and the city of Burbank. In general
a bunch of disheartening, don't-tell-me-nothing-because-we-rule
group of "extras" whose major dissatisfaction was really that
they were in imminent danger of being on LAY OFF.

Lockheed California eventually moved out entire from the Burbank
area (a division is still at AF Plant 42 in Palmdale) and ALL
the old Lockheed buildings have been razed, hardly any rubble is
left. The fabled Skunk Works in Building 82 was one of the first
to be torn down. The Lockheed ARC is but a shell of its former
self and the laid-off Lockheed workers (who didn't want to go to
Georgia) are off muttering in their isolated little corners.

The huge Lockheed production complex along Empire Avenue just
disappeared and, like a Phoenix from the ashes, the fabulous
new Empire Center of many, many stores and services, two office

buildings and two hotels grew on the place where all the famous Lockheed aircraft were built. All that remains of Lockheed is the silhouettes of the Vega, the Constellation, the P-38, and the SR-71 on the parking lot section signs. Rebirth.

I was reminded of this from yesterday when my wife and I were at a store in the Empire Center. At the large entrance we saw an old geezer regaling a couple of younger women about his work at Lockheed ("over there where building 15 was" "we built airplanes!"). The young women were polite, smiled, but clearly didn't find any interest or amusement at this. Eventually the old geezer wound down and all left. In one way that's the way it will be with U.S. amateur radio. Rebirth. The new replacing the old. The old will become a memory, one not treasured so emotionally as by the old-timers. The future will be different, brighter, full of new things. New leaders will form and lead. New-timers will enjoy the new environment. Oldsters will grouse and bitch, complaining mightily about it not being as good as "the old days." Of course not. "The old days" were only a figment of imagination after all, a nostalgia of never-was, an emotion of discovery only to individuals then new to radio.

>"Amateur Worship is a Mental Disorder", is going to be the title of a book
>I am working on! <grin>

There ARE those of that disorder. They exist. They have transported
themselves to their own imaginary fairyland, a lifestyle of imagining
they are "masters of radio"...but "masters" only of an imaginary world of the 30s and 40s long gone...when Kode was King and all was simple and orderly, fixed in place.

I look forward to a FUTURE, not a past. I was in the past and all wasn't as good as it is now. The future looks like a better place, something to enjoy, to have fun in, free of the ties to old standards and practices that are out of place now.

out old

# 2732. Re: Just exactly what is the "Problem" with Pactor

N2EY:

If there are going to be fully automated nets run by automatons, then practical "open" protocols and hardware need to be established. Wide experimentation of many different protocols needs to be experimented with and the best one or two adopted--and, the ease which "newbies" can participate should be given a substantial weight in this endeavor. A narrow range of freqs would best be established for robots, it can always be widened if there is sufficient call for such.

A protocol where a "control robot" to be chosen, and adaptive procedures so the control can change as necessary. A protocol where a robot requests entrance in the net and its' traffic logically queued and handled in a "ring" approach. Also, a protocol which allows for a human operator (with the correct software/hardware) to get info and interact in an emergency or otherwise situation.

I find discussion of these matters highly exciting and believe amateur radio should help foster such directions, seems it would be beneficial to all...
